6. The Auditor’s Responsibilities Relating to Fraud in Financial Statement Audits

(1) Discussions by the engagement team, risk assessment procedures, and related activities ..127
(2) Identifying and assessing the risks of material misstatement due to fraud ................128
(3) Response to assessed risk of material misstatement due to fraud .........................129
(4) Evaluation of audit evidence .......................................................................................135

(1) Evaluation of the Scope of Assessment of Internal Control ..............................137
(2) Evaluation of Assessment of Internal Control .....................................................138
(3) Evaluation of Deficiencies .......................................................................................140
(4) Use of Management Assessment .......................................................................142
Introduction

Since its inception in April 2004, the Certified Public Accountants and Auditing Oversight Board (CPAAOB) has been conducting inspections of Japanese audit firms from the viewpoint of securing the public interest and protecting investors with the aim of maintaining and improving the quality of auditing in Japan.

The CPAAOB compiled examples of deficiencies identified in its inspections as the “Case Report from Audit Firm Inspection Results” in February 2008, and has since issued revised editions every year.

The purpose of this Case Report is to promote voluntary efforts by audit firms to maintain and improve their audit quality, by providing specific examples of major deficiencies identified in the CPAAOB's inspections as well as observed effective efforts and by presenting the audit-quality level expected by the CPAAOB. In addition, this Report also serves as reference material to be provided to the directors/company auditors of listed companies and other companies subject to audit by independent auditors, investors and other market participants.

This year’s edition has been updated to add the latest actual cases of inspections and redesigned to make the contents more easily understood, following the last year’s edition in terms of its basic structure. In addition, the “Recent Trends in Audit Firms (Monitoring Report in Fiscal 2016),” which was provided as reference material in last year’s edition, has been enhanced in its contents and separated from the Case Report as the “Monitoring Report in 2017.” Please also refer to this report.

Please submit any comments or requests regarding this year’s edition to the dedicated e-mail address below.

Responses Expected of Audit Firms

1. Ensuring the Reliability of Audits

The reliability of audits has once again been called into question following recent cases of accounting fraud. Given these circumstances, it is necessary for each audit firm to verify its audit engagements and quality control system with reference to the deficiencies and their causes described in this Case Report. In doing so, audit firms should pay attention not only to whether their engagements and systems comply with the standards formally, but also whether they strive to ensure and improve the quality of their audits. In effect, such as whether they exercise appropriate professional skepticism that could identify accounting fraud, and whether they constantly focus on the business risks of the audited companies for which they perform an audit (hereinafter a business audited company for which an audit firm performs or has performed an audit shall be referred to simply as an “audited company” throughout this Report) upon evaluating audit risks.

If deficiencies are identified in the quality control system, the audit firm should not only remedy the deficiencies but also analyze the root causes and improve them.

2. Organized Responses

The chief executive officer (CEO) of an audit firm, such as the chief director, and the person in charge of quality control (PICOQC) are required to exercise leadership to fully analyze the root causes of the deficiencies that occurred, develop and execute appropriate improvement measures, and ensure the penetration of the measures across the firm. Furthermore, the design and operation of a quality control system should not only be the individual responsibility of the CEO or PICOQC, but rather a corporate responsibility to be fulfilled by all the partners of an audit firm. Keeping this in mind, each partner of an audit firm should identify root causes and fundamental factors that may lead to deficiencies in the quality control system, and then work together in an organized manner to improve the existing conditions.

With regard to the management of audit firms, the “Principles for Effective Management of Audit Firms” (The Audit Firm Governance Code) was issued in March 2017. In light of the fact that some audit firms have already been enhancing their governance system, the CPAAOB plans to examine whether or not the governance environment established and/or strengthened by each audit firm based on the Code is effective.

3. Preparation of Appropriate Audit Documentation

As described in the “Audit Documentation” section in “Quality Control” and the “Audit Engagement Performance” section in “Individual audit engagements” of this Report, we should bear in mind that if any
The audit document has not been prepared properly for an important audit matter, this is not simply a deficiency of documentation, but in most cases, it implies that the necessary audit procedures have not been implemented. Furthermore, it also should be noted that the lack of a proper audit document usually implies that the entire audit firm also has deficiencies in engagement quality control review, periodic inspection, education, training (review of guidance and supervision of audit assistants, and audit documents, in particular) and/or other areas, not just insufficiency in the knowledge, experience, competence and capabilities of the engagement team.

4. Responding to Issues According to Size

The following characteristics have been identified in the CPAAOB’s inspections as problems with the size of the audit firm.

At large-sized audit firms, since their organizations are extremely large, issues such as the lack of frequent communication among divisions and between the head office and regional offices and difficulty in ensuring the penetration of the firm’s measures across all divisions and offices have still been pointed out. On the other hand, we can see they are working on improvements toward higher quality, such as the utilization of knowledge of outside third parties, strengthening of collaboration between different levels within the firm (management, quality control division, business divisions, engagement teams), and appropriate human resource development and personnel management and evaluation.

With regard to second-tier audit firms, it is identified that management at these firms is not sufficiently integrated, such as little involvement of partners in the firm’s operations and reliance on a large number of part-time employees for audit engagements, and that the establishment of audit performance environment does not match the expanded operations of the firms, such as through the undertaking of new audit contracts.

With regard to small and medium-sized audit firms, many CEOs and PICOQCs still do not understand the importance of quality controls. Each partner of a firm still relies on the CEO for the management of the firm and fails to make proactive efforts. In addition, they still lack the resources for designing the quality control systems.

There have recently been many cases among small and medium-sized audit firms, in particular, where they accept new engagements from audited companies with high audit risk or audited companies that frequently change auditors. Therefore, it should be noted whether or not the audit firm has sufficient capabilities to respond to such audited companies.

As mentioned above, each audit firm should pay close attention to the point that the problems differ depending on the size of the firm, and it is necessary to respond appropriately according to its situation.
To Directors, Company Auditors, Investors and Other Stakeholders

The relationship between the directors/company auditors of a business audited company and an independent auditor are being streamlined through the recent revision of the Companies Act and related regulations such as the Corporate Governance Code. Meanwhile, there has been a further rise in interest in the companies’ disclosure of proper financial information, amid recent incidents of accounting fraud by large listed companies and accounting issues related to overseas group companies.

Under such circumstances, from the perspective of investor protection and securing the reliability of the capital market, directors and company auditors in a business audited company are strongly expected to appropriately evaluate and select independent auditors, as well as fulfill their responsibilities in order to ensure proper audits, such as by allowing adequate auditing time to ensure high quality audits and by fully collaborating with the independent auditors.

It is also important for market participants such as shareholders of audited companies that the directors and company auditors in business audited companies appropriately evaluate and select independent auditors, and that companies’ proper financial information is disclosed on a continuous basis by securing proper auditing.

In view of such matters, this Case Report describes examples of deficiencies identified in the CPAAOB's inspections, which include recent accounting fraud cases, in the most easily comprehensible manner possible from the perspective of providing directors and company auditors in listed companies, as well as investors with reference materials. Furthermore, this Report describes excellent cases of improvement efforts by audit firms. Thus, we hope that this Report will be used as reference for appropriate evaluation of independent auditors.
Important Points for Users of this Case Report

1. Regarding Cases Included in the Report

(1) Although this Case Report is a compilation of relatively new cases of deficiencies that were identified in the inspections, that does not mean that the CPAAOB puts less importance on cases that were not included in the Case Report.

(2) The cases included in the Report may have had facts omitted or changed to the extent that does not affect the purport of the case.

(3) The number of cases pointed out on the following pages reflects neither the proportion of the number of deficiencies by the size of the audit firms, nor the ratio of the number of deficiencies by the inspection items.

(4) Deficiencies that were not included in the Case Report may include matters that should be noted by the audit firms and engagement teams, or may include the points to be expected in terms of appropriate audit procedures.

(5) In cases where there are multiple criteria for identifying the deficiencies, the principal provision is quoted.

2. Main Characteristics of the 2017 Edition

(1) “I. Root Cause and Service Management Environment” describes examples of large-sized audit firms that are making voluntary efforts to analyze root causes, and also explains the relationship between the governance of audit firms and the root cause of deficiencies.

(2) In “III. Individual audit engagements,” the description of “observed effective efforts” has been expanded in order to introduce examples of positive efforts made by audit firms, which may be useful as practical reference material.

Under the circumstances in which accounting fraud continues to attract public attention, descriptions of deficiencies and points to note have been enhanced in “6. The Auditor’s Responsibilities Relating to Fraud in Financial Statement Audits.”
(Definition of terms)

The definition of terms in this Case Report is as follows:

○ The term “Act” refers to the Certified Public Accountants Act.
○ The term “Ordinance” refers to the Cabinet Office Ordinance for Enforcement of the Certified Public Accountants Act.
○ The term “audit firm” refers to an audit firm, a partnership, and an individual firm.
○ The term “large-sized audit firm” refers to an audit firm with around 100 listed companies as audited companies and 1,000 full-time professional staff or more. Refers to KPMG AZSA LLC, Ernst & Young ShinNihon LLC, Deloitte Touche Tohmatsu LLC and PricewaterhouseCoopers Aarata LLC.
○ The term “second-tier audit firm” refers to an audit firm with a size below that of a large-sized audit firm. Refers to Gyosei & Co., BDO Sanyu & Co., Grant Thornton Taiyo LLC, BDO Toyo & Co., PricewaterhouseCoopers Kyoto and Yusei Audit & Co.
○ The term “small and medium-sized audit firm” refers to an audit firm other than a large or second-tier audit firm.
○ The term “JICPA” stands for the Japanese Institute of Certified Public Accountants.
○ The term “quality control (QC) review” refers to the quality control review performed by the JICPA under Article 122 of the JICPA Rules.
○ The term “Fraud Risk Response Standard” refers to the “Standard to Address Risks of Fraud in an Audit.”
I. Root Cause and Service Management Environment
1. Necessity of Root Cause Analysis

As a result of the CPAAOB's inspections, it has been recognized that when a deficiency was detected in a QC review or periodic inspection, many audit firms only developed and took cosmetic improvement measures, without fully identifying the cause of the deficiency.

Deficiencies identified in inspections may be only a part of deficiencies, which have not been identified yet. It is likely that the audit firms have other undiscovered deficiencies arising from the same root causes. Moreover, there may be root causes that would invalidate the improvement measures implemented to cope with the direct causes of the deficiencies. Therefore, improvement measures developed only to cope with the direct causes, without any root cause analysis, would not be effective or sufficient for improving the quality control system of the entire firms, and would not lead to fundamental improvement; therefore, the quality of the audits by the audit firms would not be improved.

On the contrary, taking perfunctory measures such as simply adding checklist items in response to individual deficiencies, for example, would lead to an increase in unnecessary and ineffective workload for professional staff to respond to the checklist and often prevent them from implementing an effective and efficient audit engagements.

Thus, audit firms shall understand the importance of root cause analysis of deficiencies in order to substantively improve quality control.

Recent cases of audit firms making proactive efforts to identify root causes include a large-sized audit firm, which has established an audit engagement improvement project after many deficiencies were identified in the CPAAOB's inspections, intending to raise awareness of all the staff, analyzing the cause of the deficiencies in connection with the firm’s quality control environment. The project divides the firm into four levels (management, quality control division, business divisions, engagement teams) and redefines the roles of each layer in terms of quality control as well as analyzing the current issues of each layer and their causes. Especially, the audit division, which directly controls each engagement team, is positioned as a significant layer in quality control, and is entrusted with improving the identified deficiencies according to the cause analysis, coordinating with the quality control division and proactively monitoring audit engagements, under the leadership of the management level.

2. Business Management (Governance) Environment and Service Management Environment

Many of the issues pointed out as the root cause of deficiencies are related to the business management (governance) environments and the service management environment, for example, the policy of top management, the headquarters' environment of monitoring audit field work, the culture of quality control and governance of the audit firm. Therefore, each audit firm should pay special
attention to the effectiveness of the business management (governance) environments and the service management environment such as the governance of the audit firm, which could be a root cause, without being caught by the direct cause of individual deficiencies.

The following are example cases identified in the CPAAOB’s inspections, related to issues of the business management (governance) environments and the service management environment such as governance. These are classified by the size of the audit firm:

[Case 1: (Large-sized audit firm)]

Material deficiencies were identified in individual audit engagements at the audit firm, such as insufficient examination of the precision of estimate calculations despite there being a large discrepancy between the estimate amount and the actual amount concerning an accounting estimate item.

The direct cause of such deficiency was the engagement teams focusing too much on documentation in accordance with the firm’s designated audit procedure documents and format, which led to a lack of awareness on the part of the engagement team regarding the actual situation of the business of the audited company and making a judgment whether sufficient audit evidence has been obtained or not. As a result of further analysis of the cause in view of such circumstances, it was revealed that the audit firm was strongly conscious about the need to avoid having deficiencies being pointed out (especially the same deficiencies being identified) in external inspections, since the results of external inspections such as reviews at the network firm to which it belonged (hereinafter referred to as “global review”) were largely reflected in personnel evaluation. Under such circumstances, a problem in the quality control environment was identified, where the CEO and PICOQC made improvements to the audit procedure documents and format by giving priority to such deficiencies as identified in the past external inspections, but did not make enough effort to encourage partners to proactively fulfill their roles to improve the quality of audit regarding other items.

[Case 2: (Second-tier Audit Firm and Small and Medium-sized Audit Firm)]

Many deficiencies in basic audit procedures were identified in the audit firm concerning accounting estimates and verification of notes by related parties.

The direct causes of such deficiencies were that some partners and staff followed the previous audit procedures without effectively understanding the auditing standards and were not reviewing the audit records. This tendency was especially noted among partners who worked concurrently at another firm and among part-time employees. As a result of further analysis of the cause in view of such circumstances, an operational issue was identified where the audit firm had many partners whose concurrent work accounted for a large percentage of their time and depended on its many part-time employees for its audit engagements, and the burden on full-time partners was large due to the small percentage of such employees, although the CEO was trying to shift the business structure to one that
was operated mostly by full-time partners.

[Case 3: (Second-tier Audit Firm and Small and Medium-sized Audit Firm)]

A large number of deficiencies were broadly identified in multiple individual audit engagements at the audit firm.

The direct causes of the deficiencies were that the engagement team including engagement partners was lacking understanding and knowledge on the auditing standards. The audit performance environment was weak in general at engagement teams, which consisted of newly hired part-time certified public accountants (CPAs) and employees not qualified as CPAs, etc. As a result of further analysis of the cause in view of such circumstances, operational issues were identified, such as the CEO lacking understanding and knowledge of audit standards and not being aware of the weakness in the audit performance environment as he/she focused on expanding non-audit business and was mainly engaged in the operation of group companies, and the CEO and PICOQC hardly being involved in quality control operations.

3. Specific Examples of Root Causes

In improving the deficiencies, it is necessary to address the fundamental issues of the entire firm, such as those related to the service management environment of the firm, improving the audit quality as a whole, using the following examples of root causes as reference.

[Large-sized audit firms]

In light of the fact that several deficiencies have been continuously identified in individual audit engagements, although the quality control system of large-sized audit firms has been apparently developed we understand that there still remain several deficiencies in the effectiveness of their operation.

Root causes of deficiencies identified in large-sized audit firms in the CPAAOB’s inspections can be categorized as follows:

(1) Lack of understanding of quality control

Since large-sized audit firms have several thousands of employees, they usually have multiple divisions, consisting of several hundreds of staff managed by a division manager, etc. So, we can see their characteristics that they have multiple offices, including some regional offices.

Under such circumstances, in order to improve the QC level across the entire organization, it is necessary not only for firms to design the organization and procedures of a quality control system, but also for the management, including the CEO, to provide strong leadership, and for each division to
instill the improvement measures into the engagement teams.

However, there may be problems in leadership, including the management’s awareness in quality control, and in initiatives of the divisions as well.

The following are specific examples of root causes:

- Efforts to improve audit quality placed priority on avoiding being identified as having the same deficiencies as before in external inspections such as global reviews, and focused on improvements in individual deficiencies that were identified (preparation of audit documentation, matters related to responses to the U.S. PCAOB, etc.). The CEO and PICOQC have not taken measures to encourage partners to proactively fulfill their roles, such as to understand the actual situation of the business of the audited company and to make their own judgment whether sufficient audit evidence has been obtained. (Please also refer to [Case 1: (Large-sized audit firm)] on page 10 with regard to this example.)

- The CEO and PICOQC of an audit firm understood that the engagement partners had the required level of audit quality control capability and sufficient awareness of audit quality, and did not fully feel anxious about the quality of the audits conducted by the audit firm.

- The management, including the CEO, has not fostered corporate cultures that review the work from a broader perspective and improve the audit quality conducted by the on-site engagement teams.

- Each division, etc., that is responsible for audit quality improvement has not thoroughly been implementing measures to improve audit quality by engagement teams based on the policy of the management including the CEO.

(2) Insufficient understanding of the actual situation of audit fieldwork and verification of improvement measures

The CEO and PICOQC shall understand in detail the performance of professional staff of each division as well as the audited companies and verify whether or not quality control measures have been instilled over the entire organization, and lead the results of the verification to further improvement, so that the improvement measures permeate the huge and complicated organization. In addition, each division must take the initiative in implementing measures to improve audit quality.

Whereas, there may be issues such as an insufficient understanding of the actual situation of each division and an insufficient verification of whether the improvement measures are appropriately carried out.

The following are specific examples of root causes:

- Although the PICOQC was supposed to verify whether or not the quality of all audits had been improved with periodic inspections and interim reviews, he/she had failed to establish environment to carry out effective monitoring (i.e., PICOQC did not take timely actions for audit procedures
concerning audit engagements that require immediate improvement, despite combining periodic inspections and interim reviews).

- Since information on the ability of each partner in quality control had not been sufficiently gathered, such ability had not been sufficiently analyzed, and individual measures such as re-education of partners had not been implemented.

- With regard to the improvement measures for quality control deficiencies, simultaneous reviews are only performed on listed companies.

- Each partner’s quality control abilities and awareness for audit quality had still not been grasped sufficiently, nor had the audit risks of audited companies been understood by the Quality Control Division or each division. Furthermore, since the ability of partners and audit risks had not been thoroughly grasped, engagement teams that can deal with audit risks of audited companies had not been thoroughly organized, as evidenced by audit engagements where no engagement partners or engagement quality control (EQC) reviewers that can deal with risks have been assigned.

- Regarding improvement measures for the deficiencies identified, the CEO and PICOQC only provided instruction to engagement teams as in the past, and did not verify the appropriateness or effectiveness of the improvement measures, as they did not understand the necessity of verification.

[Second-tier Audit Firms and Small and Medium-sized Audit Firms]

Second-tier audit firms and small and medium-sized audit firms vary in size and history, and the level of quality control differs significantly among firms. The size of their organization, however, is relatively small and it is difficult for them to provide sufficient organized support to engagement team; these features are common to both types of audit firms. The features among small and medium-sized audit firms are that the level of operation and quality control often depends significantly on the competence of individuals that belong to the audit firm, including the CEO, and the relationship between the partners and the firm.

Based on the background above, the root causes of deficiencies identified in the CPAAOB’s inspections can be categorized into the following three:

1. Business management environment, management policy (including policies related to evaluation, compensation and other incentives) or business model of audit firms
2. Quality control stance and efforts by the CEO, PICOQC and engagement partners
3. Partners’ awareness of responsibilities; mutual monitoring among partners

Many second-tier audit firms, in particular, expand their operations through mergers with other audit firms and positive undertaking of new audit contracts. Under these circumstances, issues concerning post-merger integration have been identified, such as cases where the quality control
system has not been sufficiently designed and operated, despite the expansion of operations, and cases where some of the merged firms have failed to maintain the level of quality control of each audit engagement after the merger, since the purport and requirements of audit standards are not fully understood.

The following are specific examples of root causes:

(1) Business management environment, management policy (including policies related to evaluation, compensation and other incentives) or business model of audit firms

- The audit firm had many partners who had a high percentage of concurrent work, and depended on a large number of part-time employees for its audit engagements. Although it was pointed out in the previous CPAAOB’s inspections that such a business structure made it difficult for the management philosophy to be instilled and for the CEO, etc., to enforce governance, the firm has still not been able to make fundamental improvements to its business structure. Therefore, the development of effective governance is insufficient to thoroughly enforce quality control across the entire firm. (Please also refer to [Case 2: (Second-tier Audit Firm and Small and Medium-sized Audit Firm)] on page 10 with regard to this example.)

- The CEO was mainly engaged in the operation of affiliated companies of the audit firm in order to focus on expanding non-audit business. Other representative partners were also engaged mainly in the operation of their individual firms. Therefore, not only were the CEO, etc., hardly involved in quality control operations of the audit firm, but were also not aware of the vulnerability in the audit performance environment such as the lack of professional skills of professional staff. (Please also refer to [Case 3: (Second-tier Audit Firm and Small and Medium-sized Audit Firm)] on page 10 with regard to this example.)

- On the inspection base date, the audit firm neither met the criteria for the statutory requirements of partners involved in the operation control structure nor secured enough human resources to perform proper audits. The audit firm has not established environment to perform an organized audit commensurate with the audit risks.

- The audit firm recently increased its audit certification operations, including by undertaking audit contracts from audited companies with high audit risk, and depended on many part-time employees for audit assistants. Whereas, the contents of education and training of employees do not match their knowledge and capabilities.

- Audits by the audit firm were performed at three offices, to each of which a PICOQC or the like was assigned. However, the roles of the PICOQC, etc., were unclear and not fully coordinated. To make matters worse, on the grounds that education/training of professionals was provided separately at each office, they were inconsistent and insufficient in terms of their contents.
(2) Quality control stance and efforts by the CEO, PICOQC and engagement partners

- The CEO has been involved in the audit of an audited company for many years in his own individual firm. With regard to new audit engagements, he conducted risk assessment surrounding the audited companies when he first undertook the contracts. Under these circumstances, even though the situation of the audited companies had changed, the CEO did not re-examine the audit risks of the audited companies and was overconfident that he fully understood the audit risks related to the audited companies.

- Since the engagement partner and the audit assistant had lengthy audit experience and were continuously involved with audits of the audited company, the CEO assumed that the engagement team would carry out audit procedures appropriate to the audit risks that the CEO understood, as long as he conveyed the risks to them.

- The CEO and engagement partners relied on the assertions of audited companies based on their audit experience, and were not sensitive to fraudulent risks. In particular, certain engagement partners relied on the assertions of a high audit risk audited company and did not perform audit procedures with professional skepticism. They did not understand current accounting and audit standards either.

- The PICOQC was busy dealing with a merger and other matters, and failed to thoroughly enforce the use of audit tools by the engagement teams in light of audit standards. He/she had not taken sufficient actions, such as sufficient verification of the improvement of identified deficiencies, in order to improve the quality of engagement teams that did not meet the quality level required for audits.

- Professionals, including engagement partners, had a poor understanding of the current audit standards, because the education and training provided by the audit firm were not appropriate for the audit on listed companies.

- The CEO was not engaged in the operation of the firm properly, without exercising leadership as the person that had ultimate responsibility for business management and quality control. Therefore, the CEO did not appropriately acknowledge or instruct the quality control of each PICOQC, although he had assigned a PICOQC to each area of quality control and had them share roles.

- The CEO did not appropriately evaluate the quality of individual audit engagements or the professional skills of professional staff, even though the most recent quality control review had identified material deficiencies. He had partners with insufficient understanding and knowledge of the quality levels required under current audit standards serve as engagement partners or EQC reviewers of listed companies for many years, and had not established an effective quality control system.

- Even though the audit firm was expanding its audit engagements, including new engagements from audited companies with high risk, the CEO and PICOQC assumed that the situation could be sufficiently handled by adjusting the workload of partners without increasing the number of professional staff. However, many of the audit engagements relied on partners with low evaluation on quality control. Amid such circumstances, the CEO and PICOQC did not make sufficient efforts in
accordance with the expansion of the organization’s business, without improving the quality control skills of such partners.

- The CEO and PICOQC assumed that there would be no significant quality control issues as long as they avoided audit failures by fully addressing matters that the engagement team deemed significant in audit engagements. Furthermore, they responded to deficiencies identified in the quality control review by taking improvement measures merely as a formality without fully analyzing the cause, on the grounds that material deficiencies had not been identified in the past quality control reviews.

(3) **Partners’ awareness of responsibilities; mutual monitoring between partners**

- As the circumstances surrounding audits change, the partners lacked an attitude to maintain and improve the audit quality of the firm, such as proactive actions to revise conventional QC methods and audit procedures, and were reluctant to change themselves under a situation where major audit issues were unlikely to occur.

- The audit firm was incorporated by several CPAs who were also running their own individual firms to carry out audit engagements. Therefore, the firms were managed as if each engagement team was an individual firm under private management, since the compensation of each partner was determined based on the performance of his/her engagement teams. Each engagement team handled quality control issues, implemented improvement measures and the solutions by themselves. There was an atmosphere wherein partners in an engagement team could not butt in on other engagement teams.

- Because the current audit firm was incorporated based on the individual firm of the CEO and the CEO led the acceptance of major engagements, other partners considered that the firm was something like a personal office of the CEO, and thus have a propensity to rely on the CEO for most of the management of the firm.

- As a partners’ meeting has ultimate responsibility for the quality control system in an audit firm, each partner should be aware of the responsibility as a member of this meeting, in order to design and operate the quality control system of the audit firm. However, partners, including the CEO, were not aware of their responsibility regarding the operation of the firm. And therefore, the partners’ meeting did not function well.

- Partners lacked experience in quality control operations of an audit firm or in forming audit opinions of listed companies prior to the establishment of the firm. They also had insufficient understanding and knowledge of the quality level required under audit standards. In addition, with regard to quality control of the audit firm and audits of listed companies, they lacked an attitude of seeking to improve audit quality and professional skills since they assumed that they could fully deal with issues based on their experience.

- Partners, including the CEO, have not carried out self-improvement on audits although audit levels required under audit standards have changed, and do not understand the levels required under current
audit standards. In addition, they are not fully aware of the necessity of continuously reviewing the quality control environment according to quality levels required under current quality control standards.
II. Quality Control System
**Implementation of Quality Control Operation**

**Outline**

The CPAAOB inspects whether measures developed by audit firms to ensure adequate operations and maintenance/enhancement of the QC system are appropriate to the size and characteristics of the firm.

Responses to requirements for QC systems under the audit standards vary between large-sized audit firms with several thousand members, and small and medium-sized audit firms. Furthermore, many deficiencies identified in the past reflect the size and characteristics of each audit firm, and the background to the deficiency as well.

Therefore, in “II. Quality Control System,” examples of deficiencies identified in the CPAAOB inspections are divided into “Large-sized audit firms” and “Small and Medium-sized Audit Firms,” and introduced basically according to the provisions of “Quality Control for Audit Firms” (Quality Control Standards Committee Statement No. 1).

**Analysis of deficiencies that occurred**

Regardless of the size of an audit firm, the purpose of establishing a QC system is to reasonably ensure the quality of audit engagements.

However, some audit firms developed a QC system only as a formality. In such cases, the QC system developed by the audit firm often does not work as expected and results in deficiencies, due to such causes as the failure to appropriately operate the system and to organically link the system to the improvement of individual audit engagements.

At large-sized audit firms, although deficiencies related to the design of a QC system have seldom been identified in recent years, there are still many deficiencies in individual audit engagements. Therefore, it can be assumed that there are deficiencies in the operation of the QC system. Specifically, operation-related deficiencies have been identified in areas such as reviews of audit documentation and periodic inspections.

Furthermore, deficiencies in individual audit engagements that were identified in the past by the CPAAOB inspections and quality control reviews were improved merely as a formality without uncovering their fundamental causes, which has led to continued identification of deficiencies with the same causes in other individual audit engagements. From such cases, it may be deemed that efforts to improve operations related to quality control are insufficient.

For example, there are cases where measures that were developed to improve the deficiencies have not fully permeated the divisions and engagement teams, which have resulted in failure to achieve the expected effects and in continued identification of the deficiencies in the division or engagement team.

At second-tier audit firms and small and medium-sized audit firms, deficiencies continue to be identified in a broad range of areas in terms of both the design and operation of the quality control
system. In addition, as at large-sized audit firms, there were cases where deficiencies that had been identified in the past by the CPAAOB inspections and quality control reviews were not appropriately improved in individual audit engagement inspections. Many such cases were deemed attributable to the quality control system. The above resulted from the facts that the CEO and the PICOQC did not understand the purpose of quality control operations, and that the design and quality control system were not conducted or used appropriately. In addition, there were cases where sufficient resources were not applied to the establishment of a quality control system that directly affects the audit quality.

A cause that is unique to second-tier audit firms is the failure of quality control system functions to suit the expansion of the size of the corporation through merger or acceptance of new audit engagements. For example, although persons in charge of each function of the quality control system including EQC reviews and education/training were appointed, they could not identify and correct the deficiencies that are inherent in terms of quality control and individual audit engagement, because there was no one responsible for the quality of audit.

**Expected response**

Based on the primary purpose of a quality control system, which is to reasonably ensure the quality of audit engagements, all audit firms are required to establish such a system effectively and efficiently, depending on the size and characteristics of each audit firm, so that the QC system can effectively work in individual audit engagements. Specifically, the CEO and PICOQC of audit firms should understand the purpose and importance of the quality control system, and take the initiative in ensuring that each professional in a firm understands that the primary purpose of the QC system is to spread measures to improve the quality of audit throughout the entire organization, and monitors its effects at all times.

The content and scope of quality control policies and procedures stipulated by an audit firm are affected by various factors, such as the size and composition of professionals at the firm, the characteristics of management, and whether the firm belongs to a global network. In light of this, the CEO and PICOQC of audit firms should establish appropriate QC environment according to the size and characteristics of their firm and appropriately maintain the system by reviewing it as needed.
[Large-sized Audit Firms]

1. Initiatives to Improve Performance

Points of focus

Although large-sized audit firms have established QC systems as a formality, it is believed that there are certain deficiencies in the effectiveness of quality control, including the administration of the system. Therefore, the CPAAOB inspects, in particular, whether the firm is making effective efforts to improve its operations, instead of those merely as a formality, against deficiencies identified in the previous CPAAOB inspection or QC review at periodic inspections.

Specifically, the CPAAOB checks the status of cause analysis of the deficiencies identified in the past and the status of measures to improve operations, such as measures based on the status of analysis, as well as the effectiveness of the firm’s improvement efforts by verifying individual audit engagements. In the case where issues are identified in the measures to improve operations, the CPAAOB seeks to identify the operational and structural issues that might be the cause of such insufficiency, and inspects the effectiveness of the improvement measures carried out by the firm.

Outline of inspection results

At large-sized audit firms, improvement measures for deficiencies identified in the CPAAOB inspections and QC reviews may be planned under the initiative of the QC department at the headquarters, and engagement teams learn about them through training and notifications. Each engagement team then carries out response through the revision of audit procedures based on the risks of each audited company considering the content of the measures.

Although such response is effective against issues such as the lack of basic understanding of audit procedures, improvements that rely on the initiative of the QC department are insufficient to instill the purport of the measures throughout the entire organization of large-sized audit firms with several thousand employees and multiple offices, including those outside major cities. Therefore, in carrying out measures to improve operations at large-sized audit firms, it is necessary to make company-wide responses in an organized manner under the leadership of the CEO and with a high awareness toward improvement not only in the QC department but also among other departments and partners.

However, the CPAAOB inspection has revealed that organized improvement measures are not sufficient at different levels within the firm, such as departments and partners. Specifically, there were cases where improvements were not permeated at firms whose departments and regional offices had no personnel exchange with other departments, resulting in static human resources.

Expected response

Large-sized audit firms employ several thousands of staff members and have multiple offices, including those outside major cities. Therefore, they usually have multiple departments, each consisting
of several hundreds of staff members and managed by a department manager or equivalent. In order to disseminate improvement measures planned at the headquarters to the entire organization as a response toward improvement and achieve sufficient effects, the entire firm should respond to any deficiency together with division managers, based on the understanding of the entire firm in quality control, instead of response only by limited divisions, such as the QC division. Thus, the expected effects can be achieved.

The CEO in particular should take the initiative in encouraging all members, especially the engagement partners, who are in a position to lead the engagement teams, to improve operations, so that the intent of the improvement permeates the entire organization. Thereupon, the PICOQC is required to plan and implement the timely and appropriate measures under the instructions of the CEO, while division managers are not required to only improve operations but to provide appropriate instructions and urge professional staff under their management to make appropriate responses.

Furthermore, the CEO and PICOQC should together with division managers or equivalent, establish an effective system to monitor improvement and take appropriate actions to promptly resolve any issues that were identified in the inspection.

In carrying out measures to improve operations at large-sized audit firms, you have to pay close attention so that the measures do not become a formality, such as by avoiding giving uniform instructions for improving deficiencies throughout the entire firm. For this purpose, it is necessary to carry out moderated and effective measures, such as by fully analyzing the tendency and cause of the identified deficiencies to identify the target areas for performance improvement (for example, certain departments and subordinate offices, audit items such as accounting estimates and response to fraud, and IPO-related audits), and focusing on effective improvement measures that suit the target areas.

Case 1: Penetration of measures (existence of a unique culture)

Certain departments had little personnel exchange with headquarters and other departments, since members unique to the department had managed the department. This had led to static human resources. Therefore, there was a unique culture in their operations of adopting a management style based on its own policy instead of that of the firm’s.

Therefore, the instructions of the headquarters had not fully penetrated the department and, as a result, no improvements were made toward deficiencies identified in the CPAAOB inspections and other reviews.

(Quality Control Standards Committee Statement No. 1, paragraphs 15–16)

Case 2: Verification of improvement

The audit firm changes its engagement partners engaged in audit engagements with many deficiencies identified in the CPAAOB inspections, in order to limit the number of audited companies they are in charge of. However, an engagement partner that was subject to the
limitation of the number of audited companies in charge was retained in a certain individual audit engagement due to reasons such as handover, with an engagement partner to be newly engaged in the engagement supplementing the roles of the above engagement partner.

However, the new engagement partner was held up by a temporary project of another engagement and could not be involved in the above engaged as initially planned. Therefore, the engagement team has not been able to fully respond to the accounting issues of the audited company.

Furthermore, although the new engagement partner initially reported to the division manager of the audit firm about the temporary project of another engagement and accounting issues, he/she did not make subsequent reports on an ongoing basis. The division manager failed to respond to the situation where full involvement of the new engagement partner cannot be expected such as by assigning more employees to the engagement team.

(Quality Control Standards Committee Statement No. 1, paragraphs 15–16)

**Points to Note**

When taking measures to improve operations by changing team members, attention must be paid to check whether the personnel change has yielded the expected effects.

In addition to the above, even though the initiative of improvement was not effective, the QC division and other departments did not carry out monitoring or other actions and not verify the improvement status for each engagement team. Then, it can be said that the CPAAOB inspection was made before appropriate improvement guidance could be provided. This led to the identification of cases of an “unimproved” situation. It would be effective to use quality control systems such as EQC reviews and periodic inspections to understand the progress of improvements at audit firms on a timely basis.
2. Operation of the Quality Control System

**Points of focus**

At large-sized audit firms, although deficiencies related to the design of a QC system have seldom been identified in recent years, there are still deficiencies identified in individual audit engagements. The CPAAOB believes that, although the format (organization and procedures) of QC systems is developed, there are deficiencies in the effectiveness of QC systems including their operation.

Therefore, the CPAAOB inspections examine the existence of operational deficiencies of the QC system related to individual audit engagements from the perspective of whether the QC system that the audit firm established has failed to lead to the maintenance and improvement of the quality of the audit that each engagement team implements, resulting in the failure to identify and prevent audit deficiencies.

Change of auditors at listed companies has been increasing in recent years. In undertaking new audit engagements of large companies such as listed companies, it is necessary to fully examine the time needed for auditing, the human resources such as professional staff and the level of audit fees in order to reasonably ensure the quality of audit.

Therefore, the CPAAOB inspections not only evaluate the risk of undertaking audit engagements but also verify whether the time for auditing and human resources as well as the level of audit fees are fully examined to ascertain whether the quality of audit is reasonably ensured.

**Outline of inspection results**

In terms of the operation of QC systems, the CPAAOB has identified many deficiencies in areas such as reviews of audit documentation, EQC reviews and periodic inspections. Specifically, there were many cases where the engagement partners or equivalent who review audit documentation, the EQC reviewer and the person in charge of periodic inspections had not fully understood the changes in the environment surrounding audited companies, the circumstance of the audited companies, or the audit procedures performed by the engagement team, and failed to detect the deficiencies of individual audit engagements.

The CPAAOB has pointed out as the causes of such deficiencies that, although there were differences in awareness of audit quality and abilities of quality control among partners such as engagement partners and EQC reviewers, the QC department could not fully understand the differences or assign the appropriate engagement partners and EQC reviewers, and, in addition, the engagement teams did not proactively consider how to ensure audit quality as they relied on manuals and the headquarters’ instructions.

**Expected response**

Engagement partners should understand that they are responsible for supervising engagement team members, considering their competency and experience, and leading them to conduct audit engagements
sufficiently and appropriately, and should proactively engage in every phase from audit planning through the forming of opinions.

Furthermore, EQC reviewers should confirm that audit engagements have been conducted sufficiently and appropriately, for example, by reviewing audit procedures and audit evidence related to significant matters described in the audit documentation to ascertain that there were no problems in the process of forming opinions.

The CEO and PICOQC should then establish environment where the engagement partners conducting reviews and EQC reviewers can appropriately carry out operations.

Specifically, audit firms should assign appropriate engagement partners and EQC reviewers, considering each partner’s awareness of required audit quality, abilities in QC and audit risk based on the audited company’s corporate environment. In addition, if a deficiency in audit improvement caused by an engagement partner has been detected, for example, the audit firm should re-evaluate the ability in QC of the engagement partner and appropriately allocate resources based on the ability and provide re-training to engagement partners.

Large-sized audit firms utilize contents such as electronic audit documentation systems, in which audit procedures are described, and checklists that are used in EQC reviews and periodic inspections in order to perform audits and related operations effectively and efficiently. In addition, they have established consultation and council systems at the headquarters, where difficult audit issues are discussed and advice or solutions are provided. While such a system is useful in maintaining audit quality at a certain level throughout the audit firm, it might lower the awareness of engagement teams to proactively consider audit quality.

The CEO and engagement teams, including engagement partners, should endeavor to appropriately conduct audit engagements by fully understanding the benefits and limitations of a system such as the above.

Case 1: Securing effective review

The EQC reviewer assumed, through daily communication with the engagement team, that the audit procedures performed by the engagement team were sufficient and appropriate. Therefore, the EQC reviewer did not conduct sufficient reviews of audit documentation concerning important audit judgments made by engagement teams and their conclusion, by ascertaining whether the engagement teams’ explanations for important audit areas, such as audit procedures for significant risks, were supported by sufficient appropriate audit evidence.

(Auditing Standards Committee Statement No. 220, paragraphs 19–20)

Case 2: Effectiveness of periodic inspections

- The engagement team performed additional audit procedures as corrective measures against the deficiency identified in the cyclic inspection. The QC department did not sufficiently
monitor the audit documentation to ascertain whether the judgments made by the engagement team for these additional audit procedures were supported by sufficient appropriate audit evidence, since it did not understand the need to critically evaluate important judgments made by the engagement team.

(Quality Control Standards Committee Statement No. 1, paragraphs 50–51)

- The audit firm positioned the global review as its principle procedures for periodic inspection. In the global review, mainly the constituents of overseas member firms focused on priority items from the unique perspective of the global review within a limited period of time. However, since the audit firm did not fully consider such nature of the global review, it could not ensure the effectiveness of periodic inspection, nor could it fully respond to matters required under audit standards for periodic inspection.

(Quality Control Standards Committee Statement No. 1, paragraphs 50–51)

**Points to Note**

It should be noted that EQC reviews and periodic inspections are required to evaluate the content of the engagement teams explanations objectively based on documents, through examination of audit documentation.

It should also be noted that with regard to audit firms positioning the global review as the center of periodic inspection, whether the global review conducts inspections that correspond to requirements under Japan's audit standards should be ascertained, and if it is suspected that it does not, it should be ascertained whether it is necessary to take some kind of supplementary measures.

**Case 3: Review of audit documentation and supervision of audit engagements**

- Engagement partners only ascertained matters that were identified in past periodic inspections or matters that it assumed would be identified in the future, as they were strongly conscious of the results of periodic inspections, without conducting reviews to ascertain whether the risk evaluation procedures performed by audit assistants or substantive procedures were performed appropriately in light of the business environment of the audited company; therefore, they could not detect deficiencies in accounting estimate auditing through reviews.

(Quality Control Standards Committee Statement No. 1, paragraph 31; Auditing Standards Committee Statement No. 220, paragraphs 15–16)

- Engagement partners or equivalent could not identify deficiencies in audit procedures since they did not understand the need to ascertain the sufficiency and appropriateness of audit evidence through reviews of audit documentation, as well as the importance of the education of audit staff.

(Quality Control Standards Committee Statement No. 1, paragraph 31; Auditing Standards
Committee Statement No. 220, paragraphs 15–16)

- Engagement partners or equivalent assumed that audit assistants had sufficient auditing experience and skills in areas other than important audit areas, and that the degree of the risks of misstatement was relatively low. Therefore, they did not give audit assistants sufficient directions to appropriately perform audit procedures and did not conduct sufficient reviews or supervision to ascertain whether the audit procedures performed by audit assistants sufficiently met the audit levels required by the audit standards.

(Quality Control Standards Committee Statement No. 1, paragraph 31; Auditing Standards Committee Statement No. 220, paragraphs 15–16)

<i>Points to Note</i>

In a limited time frame, such as year-end audits, it is required to appropriately plan the content, timing and scope of the review of audit documentation for engagement partners or equivalent to conduct appropriate reviews and direct engagement teams through reviews. It is also required to give specific directions and supervision to audit assistants.
1. Operation Control Structure

(1) Initiatives to Improve Performance

**Points of focus**

The CPAAOB performs inspections based on QC review reports, in principle. The CPAAOB inspection focuses on the status of improvement of deficiencies identified in the previous CPAAOB inspection or QC review. Specifically, the CPAAOB ascertains the status of cause analysis of past identified deficiencies as well as the status of measures to improve operations, such as those based on the cause analysis, and also ascertains the effectiveness of operational improvement of the audit firm through inspections of individual audit engagements. Furthermore, in the case where measures to improve operations are deemed problematic, the CPAAOB seeks to identify the service management environment issues that might be the cause of such insufficiency.

**Outline of inspection results**

As shown in the case example section below, in some audit firms, initiatives to improve the deficiencies identified in the QC review were not fully implemented, and in more than one deficiency, no improvement measures were made or the improvement was insufficient.

Possible causes of the identified deficiencies include the following:

- The PICOQC merely carried out measures as a formality, such as simply disseminating information on the deficiencies through training and only instructing to respond to the items included in the checklist for improvement related to identified deficiencies, without considering why the matter was identified as a deficiency in the QC review;
- The audit firm lacked the attitude of seeking improvement in all audit engagements; and
- The audit firm had not established environment to effectively monitor the improvement of deficiencies.

Furthermore, engagement partners that review the audit documentation, the EQC reviewer and the person in charge of periodic inspection or the equivalent did not fully understand the purpose of their functions and completed their work by reviewing audit documentation and implementing checklists merely as a formality. They also relied on the engagement practitioners for the development of knowledge required for audit engagement. The audit firm did not proactively seek to maintain and improve the aptitude of professional staff or develop their capabilities. Therefore, professional staff including partners often did not fully understand the matters required under the audit standards and standards of audit of the Auditing Standards Committee Statement or equivalent. All of this led to the inability to detect the same or similar deficiencies that were inherent in individual audit engagements, and thus to make any improvement.
(Observed effective efforts)

The following responses were made at an audit firm where many deficiencies were identified in the QC review:

- The CEO directly ascertained the improvement of deficiencies in all audit engagements.
- A system that enables an early detection of audit issues was established, such as the implementation of a preliminary EQR review system.
- The identified deficiencies were understood and the improvement measures were disseminated through discussions in each engagement team.

Expected response

The audit firm must fully understand to what range and nature a deficiency should be improved, considering the reason why it was identified as a problem in the CPAAOB inspection or the QC review. Based on the results of that examination, the firm should develop and implement appropriate improvement measures for the identified deficiency. At the development stage of improvement measures, it is important that improvements of the identified deficiency are not developed as a mere formality, but that the cause of the deficiency is analyzed before effective improvement measures are formulated to eliminate the cause. At the implementation stage of the improvement measures, it is important that the contents of the measures are correctly understood throughout the organization. The firm should not only examine the individual audit engagement where the deficiency was identified, but also check whether other individual audit engagements had the same or similar situations as the identified deficiency, and fully examine whether the improvement measures developed have been properly implemented. Thus, the firm must take measures to improve all audit engagements undertaken by the firm.

Case 1: Establishment and implementation of specific procedures for improvement

- The PICOQC of an audit firm reported the recommendations for improvement by the QC review and improvement plans at the partners’ meeting, and instructed engagement partners to communicate them to each engagement team.

  The PICOQC also prepared a list of identified items and their improvement plans, and used it in order to have engagement partners confirm the instructions to engagement teams, engagement teams conduct self-inspections, as well as engagement partners and EQC reviewers perform inspections.

  However, since the PICOQC limited the scope of the improvement plans to deficiencies that were directly identified, the same deficiency as in the QC review has occurred, which was the failure to perform substantive procedures for important account balances.

(Quality Control Standards Committee Statement No. 1, paragraphs 15–16)
The audit firm prepared a checklist for deficiencies found in QC reviews and their improvement measures, while engagement partners, EQC reviewer, and PICOQC confirmed the improvement status using the checklist.

However, the contents of most of the improvement measures merely responded to the wording of the identified deficiencies as a formality, for example, “Evaluate whether management’s assumptions are reasonable and record it in the audit documentation” against the following deficiency: “Management’s assumption of the estimate is not examined.” (Quality Control Standards Committee Statement No. 1, paragraphs 15–16)

Case 2: Communication of specific policies and procedures for improvement

There were cases where the specific policies and procedures for improvement were not fully communicated within the organization. For example, in the checklist designed for periodic inspection, the PICOQC included deficiencies identified in the QC review and improvement plans for them. However, the PICOQC did not explain to other members in the firm the reasons of the deficiencies and the purpose of the improvement plans. For part-time employees, only a postal mail describing the deficiencies was sent. (Quality Control Standards Committee Statement No. 1, paragraphs 15–16)

Case 3: Verification of improvement

The CEO disseminated the improvement measures for the deficiencies identified in the QC review and monitored the improvement status through periodic inspection, but did not verify the improvements for operations that were not subject to periodic inspection. (Quality Control Standards Committee Statement No. 1, paragraphs 15–16)

Points to Note

The above example cases indicate that the same or similar deficiencies as the deficiencies identified in the past CPAAOB inspections and QC reviews were found. These cases were occasioned by merely taking improvement measures as a formality, such as simply communicating the details of the matters to be improved or using improvement checklists without identifying the root cause of the deficiencies and resolving or improving the causes. Therefore, the PICOQC should note that it is necessary not only to communicate to the engagement teams the details of the identified deficiencies but also to examine instructions in order to specifically reflect the issues into audit procedures. In addition, when using the improvement checklist or equivalent, it should be noted that the PICOQC and engagement partners need to inspect the improvement status in light of why the matter was identified as a deficiency as well as the scope of procedures that should be improved.
(2) Establishment, Dissemination, and Implementation of Internal Rules

**Points of focus**

The CPAAOB inspects audit firms for the status of establishment, dissemination, and implementation of internal rules, from the following perspectives:

- Whether the audit firm has internal rules in place to reasonably ensure audit quality, taking into consideration the size and operations of their audit firm;
- Whether the audit firm works to ensure the adequacy of the internal rules, for example, by sufficiently confirming consistency between the rules when establishing or revising them, or by revising the internal rules according to revised laws, regulations, and professional standards, as needed;
- Whether the PICOQC or equivalent distributes copies of the internal rules to professional staff (including part-time staff) and other personnel without fail, and ensures their familiarization with the rules, for example, by verbally explaining them as needed;
- Whether the PICOQC or equivalent ensures compliance with the internal rules, for example, by having professional staff or other staff monitor the status of compliance in a timely manner, as needed.

**Outline of inspection results**

In the establishment, dissemination and implementation of internal rules, as shown in the case example section below, some firms did not establish internal rules related to independence and non-audit services. Some other firms did not follow internal rules related to contract management.

Some of the reasons for such deficiencies were that the members of the audit firms did not understand the laws and standards that are applied to audit firms, and that the audit firms adopted the template of the “Audit Quality Control Regulations” that are provided by the JICPA as their internal rules without customizing them to their actual operation.

**Expected response**

Audit firms need to reconfirm that their internal rules are in compliance with the applicable laws and standards and are adequate considering the actual operational conditions of the firms. Based on this reconfirmation, they should perform sufficient examination and review as to whether their operations are performed in accordance with the internal rules. They also need to establish service management environment concerning the appropriate establishment, dissemination, and implementation of internal rules, for example, by establishing a workflow in accordance with the actual conditions of the individual firm.
Case 1: Establishment of internal rules related to independence

- The PICOQC of an audit firm stipulated in the firm’s internal rules that even if fees received from a single client accounted for 15% of the firm’s total revenues for two consecutive years, if it fell to less than 15% in the third year, the firm could avoid the application of the Safeguard. This rule did not correctly reflect the “Guideline for Independence.” (Quality Control Standards Committee Statement No. 1, paragraphs 15–16)

- The PICOQC of an audit firm only stipulated the prohibition of trading of regulated securities of clients in the internal rules “Regulations for Preventing Insider Trading,” and prohibited the provision of excessive entertainment and gifts to clients in the internal rules “Code of Conduct.” The firm did not establish internal rules that comprehensively secured the independence of the firm. (Quality Control Standards Committee Statement No. 1, paragraphs 15–16)

Case 2: Implementation of internal rules

Although the CEO and PICOQC stipulated in the “Contract Management Regulations” that the conclusion of a contract shall be notified to all partners and an inquiry of the contract details be requested when entering into a non-audit service contract with a client, neither notification nor inquiry was carried out when the majority of the non-audit service contracts were concluded. (Quality Control Standards Committee Statement No. 1, paragraphs 15–16)

Points to Note

The number of identified deficiencies in establishing rules, such as the non-existence thereof, has decreased due to the enhancement of templates provided by the JICPA or equivalent. However, since the templates were used without being customized to the audit firm’s actual operation, and the internal rules did not suit the actual situation of the firm, the rules were not actually followed at some firms. Therefore, it is vital to check periodically whether or not there are any discrepancies between the internal rules developed by the audit firm and the actual status of operation.

In addition to cases described here, deficiencies in the operation of the Partners’ Meeting have been identified, such as the compensation of professionals being decided by the CEO instead of the partners’ meeting, although the internal rules on quality control stipulate that the compensation of professionals be decided at the partners’ meeting.
Points of focus

A variety of restrictions and obligations, etc., are imposed on certified public accountants and audit firms by the Act and other laws, regulations, and professional standards, from the perspective of ensuring appropriate operations. The CPAAOB, therefore, inspects the status of compliance with applicable laws, regulations, and professional standards, and the status of the establishment and implementation of the service management environment to ensure such compliance.

Outline of inspection results

From the perspective of compliance with laws, regulations and professional standards, some audit firms had deficiencies related to legal compliance, including a lack of internal rules regarding the non-competing obligation by partners, lack of partners’ qualifications required for operational control, and a discrepancy between matters described in the articles of incorporation as the purpose of the audit firm and the firm’s actual operation. In particular, multiple deficiencies were identified in the satisfaction of partners’ qualifications required for operational control.

Causes of the deficiencies include: the PICOQC or equivalent did not fully understand the applicable laws, regulations and professional standards or did not appoint practitioners to take charge of the confirmation of regulatory compliance of each task that requires such confirmation, and did not establish a clear and concrete workflow for confirmation.

Expected response

An audit firm should establish appropriate operation control structure to ensure compliance with laws, regulations, and professional standards by identifying those operations where it is required to check the status of compliance with laws, regulations, and professional standards, and by assigning persons to be responsible for the identification work.

Case 1: Non-compete obligation by partners

The audit firm did not have internal rules that set forth procedures to check that each partner’s individual firms did not compete with the business of the audit firm and detailed procedures to approve such competing transactions.

(Quality Control Standards Committee Statement No. 1, paragraphs 15–16)

Case 2: Satisfaction of requirements for partner

An audit firm did not satisfy the requirement that the majority of partners have been engaged in audit certification services for three years or more after being registered as certified CPAs. Despite this situation, the CEO did not take necessary improvement measures. Moreover, in the
business report, the firm incorrectly included three partners who had less than three years of audit certification experience in the number of those with at least three years of experience after being registered as CPAs.

(the Act, Article 34-13, paragraph 1, Article 34-16, paragraph 2; the Ordinance, Article 25, Article 38, paragraphs 1–2; Quality Control Standards Committee Statement No. 1, paragraph 28)

Case 3: The objective described in the audit firm’s articles of incorporation and implemented operations

Although this audit firm limited the firm’s objective described in its articles of incorporation to the audit or attestation services for financial documents (operation described in Article 2, paragraph 1 of the Act), it provided the service of preparation of comfort letters, which was the service of compiling financial documents, examining or planning financial matters, or being consulted on financial matters (operation described in Article 2, paragraph 2 of the Act). Thus, the actual scope of operations did not comply with the articles of incorporation.

(Quality Control Standards Committee Statement No. 1, paragraph 31; Article 34-5 of the Act)

.Points to Note

Other deficiencies have been identified such as the failure to submit a notification of changes to the articles of incorporation by the submission due date.

(4) Information Security

<table>
<thead>
<tr>
<th>Points of focus</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPAs, in the course of their daily duties, often carry paper documents and personal computers that contain or store confidential information of audited companies. They also use e-mail to communicate with the contact persons of the audited companies. Audit firms also store electronic audit documentation and electronic data before compilation in servers installed in and outside their offices. Therefore, audit firms are required to establish and operate information security systems that fully and appropriately meet the sensitive needs of the IT environment, etc.</td>
</tr>
</tbody>
</table>

In consideration of the above, the CPAAOB inspects audit firms for the status of establishment of information security systems, from the following perspectives:

- Whether the audit firm properly assesses information leakage risks, for example, by analyzing the type of information, etc., held by the audit firms;
- Whether the audit firm has security policies and other internal information security rules in proper operation in accordance with such risks;
- Whether an information security manager ensures compliance with internal information security rules, for example, by continually monitoring whether professional staff (including part-time staff)
and other personnel observe the internal rules.

**Outline of inspection results**

As shown in the case example section below, some audit firms did not appropriately carry out any measures to prevent information leakage as specified in their internal information security rules, while others did not establish internal rules to properly control the use of Internet server services for the firm’s operation.

Causes of the identified deficiencies:

- The information security manager or equivalent established internal information security rules only as a formality, leaving the application of the rules to professional staff (including part-time staff) who use computers and other information devices.
- The information security manager or equivalent did not implement any measures to keep track of the operational status of the internal information security rules at their audit firms, placing too much reliance on such professional staff being compliant with the internal rules.
- The information security manager or equivalent did not establish internal rules appropriate for the information devices actually used in the firm.

**Expected response**

Although the opportunity to obtain extensive electronic data has increased due to the progress of digitization of confidential information of audited companies, many deficiencies for information security are still identified. Audit firms should fully understand the serious and adverse effects that information leakage would impose on the operation of the firm, and carry out the establishment and operation of appropriate information security systems in accordance with how information devices are being used at each audit firm.

**Case 1: Establishment and operation of internal information security rules**

The information security manager of an audit firm did not fully understand the level and scope of information security measures required. He or she thus established a security policy and other internal rules, and performed information security checks just as a formality. As a result, the following deficiencies were observed.

- A security policy to prevent information leakage was in place. However, no policy or procedures for action to take in the event of information leakage were established.
- Stored data were not classified according to their crisis level; no backup or encrypted data were created for stored data; no ID codes or passwords were assigned to professional staff to protect critical electronic data from unauthorized access.
- The firm required all members to submit a “security policy compliance report,” but some members failed to submit this report.
Case 2: Operation of internal information security rules for part-time professional staff

The PICOQC of the audit firm had stipulated in the “Information Security Regulations” to monitor remaining data related to audit engagements on personal PCs when a part-time professional staff used his/her personal PC for audit engagements. However, the PICOQC merely used the “Checklist on Information Security” as a formality and did not actually ascertain whether there was remaining audit engagement data on the PC.

Case 3: Security in using Internet servers for operations

An audit firm uses an Internet server service provided by a leading Internet service provider. The firm has not established internal security rules for the use of an Internet server service for the firm’s operations. Because of the lack of such internal rules, when the firm performed regular assessment of the service provider, the firm did not check whether the service provider took measures to prevent unauthorized access, whether the service provider used subcontractors for providing services, or other security-related matters of the service provider.

(Points to Note)

It should be noted that, as described in Case 2, when a part-time employee uses his/her personal PC for audit engagements and work as well as a full-time employee, it is necessary to take the same level of security measures for a full-time employee.

(5) Prevention of Insider Trading

Points of focus

If a CPA, who holds the important social mission of ensuring the reliability of the capital markets, partakes in insider trading using the insider information of an enterprise acquired in the course of business, trust in CPA audit may be seriously damaged.

In addition, not only will the CPA involved in insider trading be held liable, but also such involvement can seriously damage trust in the audit firm to which the CPA belongs. Each audit firm is therefore required to constantly take effective measures to prevent any of its members from participating in insider trading.

In consideration of the above, the CPAAOB inspects audit firms regarding the status of establishment
and operation of an anti-insider trading system, from the following perspectives:

- Whether the audit firm has internal rules in place that provide for effective procedures to prevent any of their members from participating in insider trading, and makes these procedures known to their members;
- Whether the audit firm appropriately takes the anti-insider trading measures set forth in its internal rules, and, whenever necessary, carries out monitoring, including confirmation of regulated securities transactions by its members.

Outline of inspection results
As shown in the case example section below, we observed cases where internal rules were prepared by using the template “Rules for Preventing Insider Trading” as a guide, but such rules were not followed.

Causes of identified deficiencies:
- The anti-insider trading manager or equivalent did not comprehensively understand the anti-insider trading measures to be performed under the internal rules;
- The anti-insider trading manager or equivalent did not confirm whether members were actually compliant with the anti-insider trading rules, having too much confidence that members were appropriately observing the relevant rules.

Expected response
Audit firms should understand that negative effects of insider trading on capital markets are generally known and take even more effective measures to prevent such trading.

Specifically, audit firms should take necessary responses such as carefully studying “Q&A Concerning Insider Trading” issued by the JICPA (September 2, 2008) and other relevant documents, re-examining the conditions of establishment, dissemination, and implementation of the rules for preventing insider trading, and considering whether the strengthening of systems to prevent insider trading is required.

Case 1: Implementing training to prevent insider trading
The PICOQC and the partner in charge of training of an audit firm only carried out training to prevent insider trading once in the past. Although regulations concerning insider trading were subsequently revised, after which new partners joined or new audit assistants were hired, no training to prevent insider trading nor surveys of the status of participation in training to prevent insider trading were conducted.

(Quality Control Standards Committee Statement No. 1, paragraph 15 and 19; Article 26 of the Act)
Case 2: Submission of written pledges regarding anti-insider trading

The PICOQC requires the submission of a written pledge to comply with the “Rules for Preventing Insider Trading,” which prohibits all members from buying/selling regulated securities issued by the audited companies to which services are provided. However, the written pledge was only required to be submitted at the time of hiring, and besides, any anti-insider trading measures such as monitoring all members for trading of regulated securities were not carried out subsequently.

(Quality Control Standards Committee Statement No. 1, paragraph 19; Article 26 of the Act)

{Points to Note}

In addition to the above cases, the following examples of deficiencies were identified in the operation of internal rules for preventing insider trading;

- Although it is specified in the “Rules for Preventing Insider Trading” that a list of audited companies to which services are provided shall be distributed to members in order to provide a warning about insider trading, the anti-insider trading manager did not distribute a list of audited companies to which services are provided; and

- Although members were instructed to submit written pledges to not buy/sell regulated securities issued by the audited companies to which services are provided, in accordance with the “Rules for Preventing Insider Trading,” written pledges from certain members who should submit the pledges have not been obtained, because the status of submission has not been confirmed.
2. Professional Ethics and Independence

Points of focus

In order for the audits performed by CPAs to be viewed as trustworthy by related parties, it is important that auditors maintain a fair and impartial attitude, not represent any special interests, and make fair judgments on the appropriateness of financial statements. To that end, audit firms are required to establish policies and procedures regarding compliance with professional ethics and independence requirements to objectively show that auditors maintain a fair and impartial attitude. In addition, the engagement partner is required to comply with such policies and procedures and to ensure that their assistants comply with them.

In consideration of the above, the CPAAOB inspects the professional ethics and independence of an audit firm from the following perspectives:

- Whether the audit firm obtains, at least once a year, a confirmation letter concerning compliance with policies and procedures for the maintenance of independence from all persons required to maintain independence; and whether appropriate verification procedures are used according to the classifications of such applicable persons;
- Whether the audit firm performs the independence confirmation procedures set forth in its internal rules before acceptance and continuance of audit engagements, and when issuing the auditor’s report, appropriately confirms that there was no change in the status of independence;
- Whether the audit firm carries out independence confirmation procedures after providing those subject thereto with the latest correct information on the subsidiaries, etc., of the audited company;
- Whether the audit firm establishes and communicates policies and specific procedures to ensure the observance of professional ethics, such as no dependence on a single income source, employment restrictions, and restrictions on gift-giving and entertainment, and whether the audit firm instructs the professional staff to follow these policies and procedures; and whether the professional staff follow the policies and procedures for the observance of professional ethics stipulated in the internal rules of the firm;
- Whether the audit firm establishes and implements policies and procedures related to engagements associated with long periods of time to ensure compliance with the legal requirement of rotation.

Outline of inspection results

As shown in the case example section below, there were identified deficiencies, such as not properly implementing the independence confirmation procedures specified in their internal rules or otherwise, and even if the procedures were implemented, the implementation was not comprehensive.

Causes of the deficiencies include: the PICOQC or the equivalent did not establish specific procedures (including but not limited to how to gather the latest information on consolidated subsidiaries, etc., of the audited company) and period of independence confirmation, and did not
appoint a practitioner in charge thereof, and the management of the implementation status was left entirely to certain staff in charge.

(Observed effective efforts)

Some small and medium-sized audit firms where compensation received from a single audited company accounted for more than 15% of the firm’s total revenues they took some measures to reduce the independence-inhibiting factor to a tolerable level. For example, when an audit firm selected a CPA from another independent audit firm as (1) the EQC reviewer before issuing the auditor’s report or (2) the cyclical inspector after issuing the auditor’s report, it carefully considered his or her audit experience, capabilities and independence. Moreover, at the time of requesting such an inspection, the audit firm fully explained the following to the CPA: issues the engagement team faced when auditing, significant risks, audit procedures adopted by the team, conclusions reached by the team and other necessary information.

Expected response

Audit firms need to establish environment as soon as possible to implement comprehensive procedures to confirm their independence in a timely and sufficient manner in order to ensure the reliability of audits, since many deficiencies are still identified in matters concerning professional ethics and independence.

Case 1: Independence confirmation procedures for professional staff

The staff in charge of confirmation of independence left the sending and submission management of the written confirmations concerning compliance with the policies and procedures for retaining independence entirely to a certain employee in charge of administration, and did not confirm the status of submission. As a result, written confirmations were not obtained from certain professional staff.

(Quality Control Standards Committee Statement No. 1, paragraph 23)

Case 2: Confirmation procedures for accepting new engagements

The policy and procedures for retaining independence that were established by the audit firm required that a written confirmation of the auditor’s independence, or equivalent, be obtained from all professionals of the audit firm before the acceptance of an engagement. However, the PICOQC obtained the written confirmations only from the engagement partners and audit assistants who were to engage in the new engagements, and did not obtain them from other partners or professionals.

(Quality Control Standards Committee Statement No. 1, paragraph 23)
Case 3: Simultaneous provision of audit certification and non-audit certification services

When an engagement team provided non-audit services to a listed audited company, the PICOQC and engagement partner did not examine whether the services were allowed to be provided simultaneously.

(Article 24-2, Article 34-11-2 of the Act; Article 6 of the Enforcement Regulations of the Act; Guideline for Interpreting the Revised Act concerning Independence No. 4, paragraph 5)

Case 4: Incomplete list of audited companies

Partly due to the fact that the PICOQC did not take measures to centrally collect the most recent information about audited companies, etc., and reflect such information in the “List of Audited companies” distributed at the time of annual independence confirmation, some audited companies were omitted from the “List of Audited companies” distributed at the time of the independence confirmation procedures.

(Quality Control Standards Committee Statement No. 1, paragraphs 20, 21 and 23)

Case 5: Calculation of dependence on income from a single audited company

The CEO and the PICOQC incorrectly interpreted the provisions in the JICPA Guideline for Independence and other independence-related rules. When calculating the percentage of compensation received from one single audited company to judge the necessity of the Safeguard, revenues which should not have been included were included in the total revenues of the firm (denominator), such as the revenues of a real estate lease company at which a partner of the firm served as a representative director and the revenues of a tax accounting firm that were not attributable to a partner who worked concurrently for the tax accounting firm.

(Guideline for Independence, paragraphs 220 and 222, Guideline for Interpreting Professional Ethics Q13)

Case 6: Length of engagement by engagement partners

The PICOQC assigned a back-office employee to prepare the document used for determining the rotation of engagement partners. The PICOQC also assumed that each partner checked the lengths of his/her individual audit engagements. The PICOQC did not check the accuracy of the document prepared by the back-office employee. As a result, the PICOQC could not detect that the document prepared for engagement rotation contained incorrect lengths of audit engagements of some engagement partners.

(Quality Control Standards Committee Statement No. 1, paragraphs 20 and 24)
3. Acceptance and Continuance of Engagements

(1) Assessment of Risk Associated with Acceptance and Continuance of Engagements

**Points of focus**

In order to reasonably ensure audit quality, in principle, audit firms need to carefully assess the potential risks involved in the acceptance and continuance of engagements (hereinafter “engagement acceptance risks”), by collecting information regarding the integrity, etc., of the audited company involved from a wide range of sources, prior to the acceptance or continuance of engagements. If insufficient consideration is given to the process of risk assessment regarding the conditions of audited companies, or if a judgment as to whether audit engagement should be accepted, etc., is made based on an incorrect understanding of the audit performance system, it might result in a situation where auditors cannot fully execute their responsibilities. It is, therefore, evidently required that careful judgment based on properly collected, sufficient information is carried out in accepting or continuing audit engagements.

In addition, it is necessary to perform newly accepted or continued audit engagements taking into consideration the risk assessment and the information regarding audited companies involved, etc., obtained in the course of judgment on the acceptance or continuation.

Therefore, before acceptance and continuance of engagements, audit firms must consider the following matters:

- Whether there are engagement acceptance risks, including questions regarding the integrity of the top management of the audited company;
- Whether it is possible for the audit firm to allocate the necessary and appropriate personnel and time, and to perform audit procedures according to engagement acceptance risks;
- Whether the audit firm retains professional staff having sufficient knowledge, experience, capabilities and competence required to deal with the specified engagement acceptance risks appropriately; and
- Whether the audit firm could comply with regulations related to professional ethics

Regarding the examination of integrity of the top management of the audited company involved in particular, audit firms are required to obtain the information deemed necessary in light of the situation in accepting engagements, and the case of continuing existing engagements, as well as, in the case of accepting or continuing engagements despite the fact that problems were identified, document how the firm resolved such problems.

The audit firm should establish policies and procedures for the acceptance and continuance of audit engagements, which include the evaluation of risks relating to the acceptance and continuance of the audit engagement considering the risks of fraud. The policies and procedures should also require that the adequacy of the evaluation be reviewed by an appropriate department or person outside the engagement team, according to the degree of risk upon acceptance or continuation of engagements.
In consideration of the above, the CPAAOB inspects how the engagement acceptance risks were assessed in each audit firm. The CPAAOB also inspects whether the identified engagement acceptance risks were properly reflected into the audit planning for individual audit engagements.

**Outline of inspection results**

The acceptance and continuance of audit engagements should be an essential issue in an audit firm’s managerial judgment. In reality, as shown in the case example section below, deficiencies were identified in internal procedures relating to the acceptance and continuance of audit engagements. For example, information on an audited company obtained by the partner who would take charge of the engagement for the audited company was not shared with the approvers of the acceptance/continuance of engagements (such as the Partners’ Meeting). Thus, they did not perform an appropriate risk assessment.

Causes for the deficiencies:

- The prospective engagement partner prioritized quick acceptance and quick commencement of the engagement rather than performing careful risk assessment and taking timely and appropriate actions for any identified problems.
- The prospective engagement partner did not have sufficient experience to make appropriate decisions regarding management fraud, audit of internal control, accounting estimates or other matters. Therefore, the engagement partner failed to properly identify and assess risks related to accepting the engagement based on facts found in a preliminary audit or information provided by the predecessor auditor.
- When discussing a proposed engagement, the partners did not recognize how important it was to assess the risk associated with the proposed engagement based on information gathered by the predecessor auditor, and other partners were reluctant to express critical opinions as to whether or not the engagement should be accepted.

*(Observed effective efforts)*

The following is an example of an effective effort observed in an audit firm.

Since the company from which the acceptance of engagement was being considered was a high-risk company where sales fraud had been identified in the previous fiscal year, it was necessary in risk evaluation upon acceptance to carefully determine the status of internal control relating to prevention of fraud. Under such circumstances, the partner in charge of new engagement acceptance not only obtained information from internal personnel such as the management, but also gathered detailed and objective information in order to corroborate the assertions of the management, such as by interviewing external experts who were directly involved in the fraud prevention measures of the company, in order to fully understand the internal systems and progress related to the actual establishment of internal control.
**Expected response**

Decisions on the acceptance and continuance of audit engagements are essential matters in an audit firm’s management. Fully recognizing this, audit firms need to re-examine what policies and procedures for acceptance and continuance of audit engagements are established and how they are operated. Regarding the risk assessment at the time of acceptance or continuance of an engagement, re-examination should be made about the policy and procedures as well as their implementation and operating effectiveness, from the viewpoints such as whether the decision of acceptance was made by identifying engagement acceptance risks based on collected information, and considering measures to manage such risks.

---

**Case 1: Approval in Partners’ Meeting**

- Whether an audit engagement could be accepted or not was to be decided at the Partners’ Meeting. However, the information materials to be presented to the Partners’ Meeting were selected only by the prospective engagement partner at his or her sole discretion. As a result, the acceptance of engagements was decided and approved without communicating to the Partners’ Meeting information necessary and sufficient for making the right decision.
  (Quality Control Standards Committee Statement No. 1, paragraph 25)

- Approval was given for the conclusion of an audit contract before completing the procedures required by the audit firm, such as obtaining responses from the predecessor auditor to questions.
  (Auditing Standards Committee Statement No. 220, paragraph 11; and No. 900, paragraph 9)

**Case 2: Risk assessment procedures when concluding a new audit contract**

- The prospective new audited company is in a state that may cast significant doubt on the audited company’s ability to continue as a going concern, such as recording net loss and negative operating cash flows for several years. Nevertheless, the audited company did not disclose the footnote information regarding a going concern assumption on the grounds of financial support from its president.

  Under such circumstances, the prospective engagement partner obtained from the predecessor auditor a copy of a financial support letter by the president upon the acceptance of the engagement. However, the engagement partner did not fully perform risk assessment procedures, such as verifying the feasibility of the financial support described in the letter by checking the financial status of the president.

  (Quality Control Standards Committee Statement No. 1, paragraphs 25–26; Auditing Standards Committee Statement No. 220, paragraph 11)
- The prospective engagement partner obtained information from the predecessor that would raise questions on the integrity of the top management. Nevertheless, this prospective engagement partner did not assess the impact of this information on the prospective engagement, and did not plan specific measures to reduce the risks expected from the acceptance of such an engagement to a tolerable level, either.

(Quality Control Standards Committee Statement No. 1, paragraph 26; Auditing Standards Committee Statement No. 220, paragraph 11)

**Points to Note**

In addition to the above, in the case of a merger with another audit firm, some audit firms did not fully consider the adequacy of audit procedures performed by the acquirer in the past years including audit procedures for the incurrence of a material asset and liability items that the audited company recorded, although they understood important matters that should be examined upon acceptance of the audit engagements. It should be noted that appropriate risk assessment procedures are necessary in the audit engagement acceptance procedures upon the merger of audit firms.

**Case 3: Risk assessment procedures when continuing an engagement**

Although the audited company carried out several transactions, which the engagement team should carefully examine the business rationality of, such as subscription to a third-party allocation of shares by a company that is unrelated to the audited company’s business and conducting significant transactions with related parties, the engagement partner did not perform assessment of contract risk in light of these events.

(Quality Control Standards Committee Statement No. 1, paragraphs 25–26; Auditing Standards Committee Statement No. 220, paragraph 11)

**Points to Note**

In addition to the above, some firms did not examine the integrity of the top management of audited companies from the perspective of responses to indications of inappropriate restrictions to the extent of audit and significant internal control deficiencies over financial reporting, although they had identified that information necessary for audits was not provided by the top management and that there were material weaknesses concerning company-level controls and process-level controls.

Audit firms must pay attention, not only when accepting a new engagement but also when continuing an existing contract, to whether the acceptance of engagements is decided after identifying engagement acceptance risks and considering actions for the risks based on information that was obtained.

**Case 4: Availability of human resources**

Upon acceptance of a new engagement, the CEO did not consider whether there was environment including sufficient time and human resources, in order to carry out procedures for
Points of focus
In cases where auditors change, the information collected and obtained by the predecessor auditor in the course of performing audit engagements in the past is extremely important. The predecessor audit firm and the prospective incoming audit firm should follow appropriate procedures to hand over the engagement from the predecessor auditor to the incoming auditor so that the prospective auditor can obtain the information necessary to determine whether it can accept the proposed audit engagement and useful information for the performance of the audit.

In consideration of the above, the CPAAOB inspects whether an audit firm uses appropriate procedures for handing over an audit engagement to another audit firm, mainly from the following perspectives:

- Whether the predecessor auditor communicates in a timely and adequate manner in order to provide the prospective incoming auditor with useful information that can be used when the successor auditor makes a judgment as to whether the audit engagement should be accepted and when the successor auditor conducts an audit.
- Whether the predecessor auditor responds honestly and clearly to inquiries made by the successor auditor. Especially in the case where the predecessor auditor is aware of information or circumstances concerning significant material misstatements in the financial statements that affected or could affect the auditor’s opinion, whether the predecessor auditor provides such information to the successor auditor;
- Whether the prospective incoming auditor makes inquiries required under the audit standards to the predecessor auditor, including the reason for the replacement of the audit firm, and the status of measures against fraud risks, to determine whether or not to accept the engagement;
- Whether the incoming auditor and the predecessor auditor respectively create and store detailed records of the processes performed for the handover of the engagement;
- Whether the audit firm confirms that the handover is properly conducted, by having the engagement team report the status of the communication to an appropriate department or a person who does not belong to the engagement team.

Outline of inspection results
As shown in the case examples below, deficiencies were observed in some audit firms regarding communication with the predecessor auditor, including failure to make appropriate inquiries.

Causes of the deficiencies include: the partner who would take charge of the engagement prioritized quick acceptance and quick commencement of the audit engagement rather than performing careful risk
assessment, solving any identified problems or performing procedures required by the audit firm in an adequate and timely fashion.

**Expected response**

The predecessor auditor needs to understand that it is essential to provide information relating to the audit risks of the audited company, etc., obtained in the course of performing audit engagements to the successor auditor in a sufficient and accurate matter.

In addition, the successor auditor needs to establish a system in which the information relating to audit risks of the audited company, etc., obtained from the predecessor auditor in the process of communications between auditors, etc., which should be properly documented and fully used in the audit.

Similarly, when an engagement is handed over within the same audit firm, information related to audit risks should be fully and clearly communicated from the predecessor engagement team to the successor engagement team.

**Case: Inquiries, etc., to the predecessor auditor**

In an audit firm, a new audit engagement with a fund audited company was proposed. The prospective engagement partner did not make inquiries of the predecessor auditor of this audited company. The prospective engagement partner assumed that no additional inquiries were necessary because the engagement partners and the predecessor auditor of the fund audited company were the same as those of another fund audited company that had been handed over in the past, and because the predecessor auditor did not notify the firm of significant information upon the handover of the engagement from the other fund audited company in the past.

(Auditing Standards Committee Statement No. 900, paragraphs 8–9)

**Points to Note**

In addition to the above, some firms did not carry out examinations in accordance with the engagement rules established by the audit firm before the due date when being handed over audit contracts, due to the significant increase in new engagements following an expansion of operations.

Furthermore, it was revealed ex-post facto at some firms that the application of accounting policies was inappropriate as a result of being handed over audit engagements without fully examining the appropriateness of the accounting policies of the audited company, on the grounds that the predecessor auditor was a large-sized audit firm. Therefore, it should be noted that it is necessary to maintain a cautious stance upon handover and to not rely too much on the predecessor auditor.
4. Employment, Education and Training, Evaluation and Assignment

(1) Education and Training

**Points of focus**

Auditors, as professional experts, are expected to always strive to develop their expertise and accumulate knowledge that can be obtained through practical experience, etc. The CPAAOB inspects education and training provided at each audit firm from the following perspectives:

- Whether the audit firm develops and provides education/training programs that fully take into account the knowledge, experience, competence and capabilities of the professional staff;
- Whether the audit firm provides education/training programs designed to maintain and improve the audit competence and capabilities of the professional staff; this may include, for example, accurately identifying areas where professional staff tend to have less understanding and providing training focusing on these areas;
- Whether the engagement partner provides direction and supervision to professional staff so that they can fully utilize and exercise the knowledge and awareness acquired in the training in audit field work.

**Outline of inspection results**

As shown in the case examples below, deficiencies in education and training were observed. Some firms did not establish proper education/training systems. The training programs provided by those firms were not effective in the specific steps of procedures necessary for important audit items, such as the development of an audit plan based on a risk-based approach and the audit of accounting estimates.

Furthermore, some firms failed to provide opportunities for education and training in areas that require special knowledge, such as the auditing of financial institutions.

Causes of the deficiencies include: the PICOQC or equivalent entirely entrusted the training of professional staff, including providing engagement-related knowledge, to the engagement partner(s) who provided direction and supervision in the field work. However, sufficient education and training were not carried out, as the engagement partner or equivalent did not give sufficient direction and supervision to audit assistants, such as timely and appropriate review of audit documentation prepared by the engagement team.

Several audit firms thought it was sufficient to rely on the voluntary efforts of part-time professional staff to improve their capabilities, and thus lacked awareness of the need to maintain and improve audit quality by ensuring that the audit firm as a whole maintained an appropriate level of knowledge, etc., of audit engagements.
**Expected response**

Audit firms must maintain and improve the competence and capabilities of their professional staff including engagement partners and part-time professional staff. The efforts may include accurately understanding in which areas the professional staff do not have sufficient knowledge, and developing and implementing education/training programs based on this understanding as well as fully taking into account the knowledge, experience and current competence and capabilities of the individual professional staff. It is also important to enhance the effectiveness of education and training through reviews of audit documentation, etc., so that the advice and awareness obtained during training programs can be put into practice in audit field work.

---

**Case 1: Effectiveness of training**

- In training, emphasis was placed on explaining the revisions to audit tools and checklists for audit procedures. The audit firm did not provide professional staff with training that supported the specific procedures that can be used in actual audit processes, including the development of an audit plan based on a risk-based approach, the audit of accounting estimates, and group audit. (Quality Control Standards Committee Statement No. 1, paragraph 28)

- The PICOQC provided training within the firm once a month mainly for their members. However, the PICOQC did not conduct internal training for special knowledge, such as the auditing of financial institutions or give sufficient instructions to participate in outside training. As a result, education/training environment that would enable auditing for the risks of the audited companies was not established. (Quality Control Standards Committee Statement No. 1, paragraph 28)

- The PICOQC only carried out training using the CD-ROM produced by the JICPA on the grounds that there was no time to plan training programs. Neither did the PICOQC follow up on absentees nor establish appropriate environment to implementing education and training. (Quality Control Standards Committee Statement No. 1, paragraph 28)

**Case 2: Education and training of part-time members**

The audit firm’s quality control rules prescribe part-time audit assistants as “professionals” who are required for education and training. However, the PICOQC did not provide part-time audit assistants assigned to major audit engagements with the training, including outside seminars, necessary to perform their duties, or take other measures to educate and train them. (Quality Control Standards Committee Statement No. 1, paragraph 28)
(Points to Note)

In addition to the above, example cases of deficiencies include the following:

- Audit firms did not provide professional staff with opportunities to maintain and improve the knowledge, competence/capabilities. They only monitored the achievement status of practitioners’ CPE (continuing professional education) enrollment obligations, and did not develop/provide an education and training fully considered on audit experience, the audit engagements, and audit standards that were newly introduced; and
- Audit firms did not continuously conduct education and training to improve the audit quality control capabilities for engagement partners. It resulted in many deficiencies identified in certain individual audit engagements.

In many audit firms, where deficiencies were identified in individual audit engagements, there was insufficient understanding of audit standards resulting from deficiencies in the education/training for professional staff. Audit firms are required to maintain and improve the competence/capabilities of professionals, including engagement partners, through education and training in order to properly perform audit engagements.

(2) Evaluation, Compensation, and Promotion

<table>
<thead>
<tr>
<th>Points of focus</th>
</tr>
</thead>
<tbody>
<tr>
<td>Audit firms are expected to design appropriate policies and procedures for compensation, performance evaluation, and promotion of personnel that places a high priority on audit quality. The CPAAOB inspects the conditions of establishment and implementation of procedures for the evaluation, compensation, and promotion of professional staff, from the following perspectives:</td>
</tr>
<tr>
<td>▶ Whether the audit firm reflects the attitude of placing high priority on audit quality in the policies and procedures relating to personnel affairs;</td>
</tr>
<tr>
<td>▶ Whether the audit firm has designed and properly followed its policies and procedures for performance evaluation, compensation and promotion of personnel with which the competence and capabilities of professional staff (especially those of quality control) and their professional ethics are fairly evaluated and appropriately rewarded.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Outline of inspection results</th>
</tr>
</thead>
<tbody>
<tr>
<td>Audit firms did not evaluate professional staff or equivalent based on professional competence and capabilities, particularly those of quality control, and compliance with professional ethics.</td>
</tr>
<tr>
<td>The above deficiency resulted from evaluation and compensation for professional staff being determined based on the subjective evaluation of them by the CEO. In some audit firms, an evaluator of partners assumed that there was no significant difference in the quality of the audit performance between the partners.</td>
</tr>
</tbody>
</table>
Expected response

Audit firms need to establish and implement policies and procedures for personnel evaluation, in order to maintain and enhance their professional competence and capabilities, particularly those of quality control, and compliance with professional ethics of members, taking into consideration the size, personnel structure and other relevant factors of the audit firm.

In addition, audit firms should properly evaluate professionals improving and maintaining their competence and capabilities as well as complying with professional ethics, and appropriately reflect the results of the evaluation in compensation, promotion, and composition of engagement teams, in order to fully reward such efforts.

Case 1: Policies and procedures for evaluating professional staff

Some audit firms did not establish policies and procedures for the evaluation of professional staff and did not take into consideration the quality of their audit performance in evaluation.

(Quality Control Standards Committee Statement No. 1, paragraphs 15 and 28)

Case 2: Evaluation of part-time employees

Evaluation of part-time employees engaged in audits was conducted in the same way as for full-time employees. However, the audit firm was concerned that part-time employees would leave the firm if their evaluation was severe, leading to difficulties in audit engagements. As a result, the audit firm did not fully reflect the results of personnel evaluation in the promotion/demotion and composition of engagement teams.

(Quality Control Standards Committee Statement No. 1, paragraphs 15 and 17)

Points to Note

In addition to the above cases, although audit firms identified engagement partners with insufficient quality control capabilities in their evaluation, the firm did not sufficiently monitor audit engagements in which these partners were involved.

Evaluation, compensation, and promotion directly reflect management policies of a representative of firms and have a large impact on the culture of the audit firm. It is necessary to develop and operate appropriate policies and procedures with full consideration of the importance of matters.
(3) Assignment

**Points of focus**

When assigning professional staff (including engagement partners) to audit engagements, audit firms must select persons who have the knowledge, competence/capabilities and experience necessary to properly perform the audits, considering the business and characteristics of the audited companies, and who can take sufficient time for the assigned engagements.

In consideration of the above, in the inspections, the CPAAOB reviews the assignment of professional staff to engagements, including their appropriateness, from the following perspectives:

- Whether the audit firm has assignment policies and procedures to ensure that professional staff, including engagement partners, with the required competence and capabilities are assigned to individual audit engagements;
- Whether, when assigning professional staff (including engagement partners), sufficient examinations are made for each professional staff regarding the time that can be spent on assigned audit engagements, understanding professional standards and laws, practical experience, abilities, etc.

**Outline of inspection results**

Deficiencies were observed in personnel assignment, including cases where the assignment of an engagement partner and the composition of an engagement team were not appropriately conducted based on audit risks. Causes for the identified deficiencies were as follows:

- The audit firm failed to appropriately conduct risk assessment for audited companies, or compose an engagement team based on risk assessment;
- The audit firm gave priority to acquiring new audit engagements without due consideration to the professional staff’s competence/capabilities and experience, or the performance capability of the audit firm as a whole;
- The audit firm did not correctly understand the QC competence of engagement partners and how much time they could spend on audit engagements.

**Expected response**

Audit firms need to assign professional staff who have the professional knowledge, practical experience, and abilities, etc., required in accordance with the size, risk and business of audited companies, and to establish a system for properly carrying out engagements to ensure that the engagement team can spend sufficient time on audit engagements, for example, by monitoring the work load.
Case 1: Assignment of engagement partner

The CEO assigned a partner, who was busy with his/her own private practice and who could not spend enough time on the audit engagement, as an engagement partner, although he knows the partner’s situation.

(Quality Control Standards Committee Statement No. 1, paragraphs 29–30)

Case 2: Composition of engagement team

- The audit firm did not specifically examine whether engagement partners and audit assistants could spend enough time on the assigned audit engagement through monitoring the persons’ involvement in other audit engagements.
  (Quality Control Standards Committee Statement No. 1, paragraph 30)

- Engagement partners, when assigning audit assistants to each engagement team, did not consider whether the persons assigned had sufficient knowledge and experience necessary to perform audit engagements in accordance with the professional standards and applicable laws and regulations.
  (Quality Control Standards Committee Statement No. 1, paragraphs 29–30)

- The PICOQC was aware of issues in the composition of engagement teams in certain audit engagements of a regional office but relied on the regional office for audit responses, including composition of engagement teams. This led to insufficient monitoring by the audit division in head office for the composition of engagement teams at the regional office, such as failing to instruct improvement.
  (Quality Control Standards Committee Statement No. 1, paragraphs 15, 29, and 30)
5. Audit Documentation

(1) Preparation and Review of Audit Documentation

**Points of focus**

Audit documentation provides evidence to show that an auditor has obtained the basis for issuing an auditor’s report and that the auditor has conducted the audit in accordance with the auditing standards generally accepted in Japan. Thus, the audit documentation serves as evidence to directly and specifically demonstrate the audit procedures performed by the engagement team.

On the other hand, especially in the case of audit procedures concerning significant or material matters, if the procedures performed were not recorded in the audit documentation, evidence other than the audit documentation (for example, oral explanations by an engagement team member who performed the procedures) cannot serve as solid and reliable evidence of the work performed by the auditor, or its conclusion. Auditors, as professionals, must pay full attention to this matter.

In consideration of the above, the CPAAOB inspects the status of the preparation and review of audit documentation from the following perspectives:

- Whether professional staff prepare audit documentation in such a way to sufficiently describe the status of compliance with the auditing standards generally accepted in Japan, the timing and scope of implementation of audit procedures, the grounds for judgments, the conclusions reached, and other information;
- Whether more experienced members of the audit team appropriately review the audit documentation prepared by less experienced members;
- Whether the engagement partner reviews the audit documentation and has discussions with the engagement team to confirm that sufficient appropriate audit evidence has been obtained to support the reached conclusions and audit opinion.

**Outline of inspection results**

Deficiencies in lack of audit documentation, which means that engagement teams did not perform appropriate audit procedures, were identified in many audit firms. In the preparation and review of audit documentation, audit procedures performed by engagement teams and the basis for auditor’s conclusion were not documented. Furthermore, as a result of the failure of the engagement partner to review from the perspective of whether the audit procedures performed were appropriately documented, deficiencies in audit documentation were identified.

Causes for the identified deficiencies were as follows:

- The professional staff did not fully understand the important role of the audit documentation when performing quality control related services in the audit firm and providing explanation of audits to others.
- Engagement partners did not consider the need to review audit documentation and left the audit
procedures to audit assistants because they misunderstood that there was a shared awareness among the engagement team of the audited company issues and audit procedures to be performed, since the partner always accompanied on site audits and understood the situation.

- The engagement partner did not sufficiently understand audit procedures through inspection of audit documentation and obtained oral explanation or equivalent from the audit assistants.

**Expected response**

Some firms did not prepare audit documentation so that the audit procedures taken for individual audit engagements could be clearly identified. There were also many cases where the processes to reach an important conclusion could not be understood from the audit documentation. The firms in which these deficiencies were found should strictly instruct the professional staff to follow the following processes:

- All procedures should be recorded clearly in the audit documentation, while confirming their adequacy and completeness;
- Professional staff must check that the audit procedures are consistent with the audit plan that was established, and describe the audit procedures performed, the results of the audit procedures and the audit evidence obtained in the audit documentation. In addition, the audit documentation must also include the conclusions reached as well as the professional judgments and the process leading to those conclusions.

Engagement partners must realize that their review of audit documentation is a good opportunity to educate and train professional staff with communicating the level of audit procedures to be performed for individual audit engagements as well as the required level of audit documentation, including the conclusions reached by professional staff and the basis for reaching those conclusions. Keeping this in mind, it is important for engagement partners to fully verify whether the conclusions reached by the engagement team are supported by the obtained audit evidence, and instruct or supervise the team as necessary.

**Case 1: Preparation of audit documentation**

The audit documentation only included the information material obtained from the audited company and did not include a description of audit procedures performed. The documentation contained conclusions related to the audit procedures but did not contain the purpose of the examination, records of the processes used to reach the conclusions, and what items were examined.

(Auditing Standards Committee Statement No. 230, paragraphs 7–8)
Case 2: Review of audit documentation

- Although engagement partners reviewed audit working papers to verify whether there were any accounting issues, they did not fully ascertain through their reviews whether appropriate audit procedures were performed for the risks identified, or whether sufficient appropriate audit evidences were obtained for items of accounting estimates, since they lacked awareness of the need to ensure the sufficient appropriate audit evidences obtained and the sufficiency of documentation at the working papers.
  (Quality Control Standards Committee Statement No. 1, paragraphs 31 and A31; Auditing Standards Committee Statement No. 220, paragraphs 15–16)

- Engagement partners did not sufficiently supervise or instruct audit assistants through reviews of audit documentation, since they did not have knowledge of the level required under audit standards and enough time for supervision and instruction.
  (Quality Control Standards Committee Statement No. 1, paragraphs 31 and A31; Auditing Standards Committee Statement No. 220, paragraphs 15, F15-2, and 16)

**Points to Note**

Engagement partners should understand that they are required to appropriately assess audit procedures that were performed through review of audit documentation, concerning the relevance of audit procedures performed by professional staff, and whether the conclusion that was reached was supported by sufficient appropriate audit evidence.

In particular, there are cases where those responsible for reviews focused on examining the appropriateness of accounting by the audited company and neglected to ascertain whether the audit procedures performed met the levels required under audit standards. It is important in reviews to re-examine whether the levels of audit procedures performed by professional staff conform to the current audit standards.

(2) Final assembly of audit files and control and retention of audit documentation

**Points of focus**

After the date of the auditor's report, and within the due period, the audit firm should assemble the audit documentation within the audit file, and complete the administrative procedures for the final assembly of the audit file. The audit firm should pay sufficient attention to the final assembly of the audit file and the control and retention of the audit documentation.

In consideration of the above, the CPAAOB inspects audit firms for final assembly of the audit file and control and retention of the audit documentation from the following perspectives:

- Whether the audit firm has established appropriate policies and procedures for the final assembly of the audit file;
Whether the audit firm completed the final assembly of the audit file by the due date, by appropriately applying the policies and procedures mentioned above;

Whether the audit firm ensures the traceability of any correction made after the final registration of the audit documentation and the reason and process for the correction, from the perspective of reliability of audit documentation;

Whether the audit firm has policies and procedures properly in place for audit documentation to ensure that confidentiality, safe custody, integrity, accessibility, and retrievability are properly established and implemented;

Whether the audit firm secures the confidentiality, safe custody and integrity of audit documentation by appropriately applying the policies and procedures mentioned above.

Outline of inspection results

In the control of audit documentation, audit firms had not established specific procedures for the completion of audit files and the retention of audit documentation. Some firms registered audit documents as the final assembly despite the fact that they had not completed important audit procedures, while some firms did not control audit documentation in a register. Cases of identified deficiencies include the following: lack of awareness in the control of audit documentation, as well as the lack of the professional staff understanding of the importance of audit documentation when carrying out quality control related services at the audit firm and when explaining audits to others.

Expected response

Audit firms need to ensure the confidentiality, safe custody, integrity, accessibility, and retrievability of audit documentation.

In order for the above, each audit firm must once again recognize the importance of the control of audit documentation and re-examine the condition of the final assembly of the audit file and the control and retention of the audit documentation, under the initiative of controllers such as the PICOQC. Audit firms must also ensure the completion of the final assembly of the audit file after the date of the auditor's report and within the due period, and implement all possible measures to prevent loss of audit evidence, leakage of confidential information, or any other damage, resulting from the loss of or damage to audit documentation.

Case: Final assembly of the audit file

The PICOQC did not monitor if the assembly of the audit documentation for annual audits and quarterly reviews were completed within the due period determined by the audit firm. (Quality Control Standards Committee Statement No. 1, paragraph 44)
Points to Note

In addition to the above cases, audit firms did not establish specific procedures, the person in charge, and other related matters regarding the final assembly of audit files, while other firms only controlled the name of the audited company, fiscal year and the total number of audit files, and did not keep track of the content of the audit documentation.
6. Engagement Quality Control Review

**Points of focus**

In principle, audit firms should establish policies and procedures for reviews in order to objectively evaluate the audit procedures performed, and the significant audit judgments and opinions made by the engagement teams for all audit engagements.

The CPAAOB inspects the appropriateness of review performed by the EQC reviewer from the following perspectives:

- Whether a person with the necessary experience and ability to perform the duties is appointed as the EQC reviewer;
- Whether the EQC reviewer reviews at an appropriate time for the planning of an audit, significant audit judgments, and expressions of audit opinion;
- Regarding significant judgments and audit opinions made by the engagement team, whether the EQC reviewer discusses with the engagement partner, reviews audit documentation, evaluates audit opinions, and reviews the appropriateness of financial statements and the draft of audit report, etc.;
- Whether the EQC reviewer examines the appropriateness of the evaluation of the engagement team members’ independence, the necessity of consultation with experts and the conclusion reached, and whether the important judgments made by the engagement team were supported by sufficient appropriate audit evidence, by reviewing the audit documentation.

**Outline of inspection results**

Ineffectiveness of the review process was observed in many cases of deficiencies, for example, the EQC reviewer did not fully review the appropriateness and sufficiency of the audit evidence and its judgment process related to significant matters, from a viewpoint that the EQC reviewer evaluates objectively; the EQC reviewer could not find deficiencies in the important audit procedures in individual audit engagements. There were also cases of deficiencies in the adequacy of EQC reviewers, where an EQC reviewer with abilities corresponding to the audit risk was not appointed. Furthermore, there were also many cases where deficiencies were identified in the operation of reviews as a result of analyzing the cause of deficiencies of individual audit engagements.

Causes of the identified deficiencies include the following issues:

- Due to reasons such as limitations in the personnel composition of the audit firm, an EQC reviewer with sufficient knowledge and experience corresponding to the audit risk as well as having spent enough time on reviews, was not assigned;
- Although the EQC reviewer paid attention to responding to deficiencies identified in the CPAAOB inspections and QC reviews, he/she merely examined the same matters as the deficiencies and did not review the situation of responses to similar matters.
- Despite the fact that the firm did not have a sufficient number of partners and members having
sufficient knowledge and experience to perform the review, the PICOQC did not examine whether persons qualified as an EQC reviewer have been recruited or developed;

- The EQC reviewer assumed, from the daily communications with the engagement team, that the audit procedures performed by the team were sufficient and appropriate. Thus, the EQC reviewer did not examine the important judgments made by the engagement team and the sufficiency and appropriateness of their audit procedures through audit documentation;

- In an audit firm where a small number of partners operate the business, the EQC reviewer did not spend sufficient time for the review because the EQC reviewer had to give priority to the audit engagements he was in charge of;

- As the engagement team did not pass on to the EQC reviewer (including in cases entrusted to an external EQC reviewer), in writing or by any other appropriate means, information regarding the condition of the audited company and the description of significant matters, the engagement team and the EQC reviewer did not share the recognition of risk and other audit matters.

Expected response

When reviewing the audit planning, the EQC reviewer needs to review the risk assessment procedure performed by the engagement team and further audit procedures planned by the engagement team from objective standpoints, by taking into account not only the business activities and changes of business performance of the audited company, but also the business risk related to the business objectives and strategies of the audited company.

In addition, when reviewing the forming of the audit opinion, the EQC reviewer needs to undertake a review through not only discussing significant matters for forming the audit opinion with the engagement partner but also reviewing the audit documentation related to significant judgment to confirm that the conclusions made by the engagement team were supported by sufficient appropriate audit evidence. Especially at small and medium-sized audit firms, partners who also fulfilled the role of EQC reviewer were usually quite busy because the firms were operated by a small number of partners. Consequently, there were some cases in which those firms found it difficult to undertake reviews appropriately. Therefore, audit firms are required to take action to enhance and strengthen their EQCR environment after reaffirming the importance of the EQCR of audit engagements.

Case 1: Eligibility of the EQC reviewer

> Partners who did not have sufficient reviewing capability were appointed as EQC reviewers, since the CEO and PICOQC did not take any measures to improve the capability of EQC reviewers other than training and did not inspect their eligibility.

(Quality Control Standards Committee Statement No. 1, paragraph 38)
The audit firm did not establish environment that ensured effective reviews. For example, since more review duties were assigned to a specific EQC reviewer than to other EQC reviewers, that EQC reviewer could not spend sufficient time on each review and thus did not check the appropriateness of the extent of the audit procedures for significant audit risks.

(Quality Control Standards Committee Statement No. 1, paragraph 38)

Case 2: Securing effective review

- The EQC reviewer did not inspect the necessary audit documentation and merely discussed the significant audit procedures performed with the engagement team, such as risks requiring special consideration and important accounting estimates, based on the explanatory material for the review, and completed the review without realizing that the engagement team did not perform sufficient audit procedures.

(Auditing Standards Committee Statement No. 220, paragraphs 19–20)

- Reviews of audit engagements were conducted under a council system of all representative partners at the review committee held once a month. Reviews were carried out verbally based on the submitted review documentation, and were completed without examining audit working papers related to material judgments on significant risks. Accounting issues were mainly discussed at the committee and they did not sufficiently discuss whether sufficient appropriate audit evidence was obtained.

(Quality Control Standards Committee Statement No. 1, paragraphs 34, 36, and 37; Auditing Standards Committee Statement No. 220, paragraphs 18–20)

Case 3: Follow-up of deficiencies found in the EQC review

With regard to material deficiencies identified in the review, the EQC reviewer only received explanations from the engagement team about additional procedures and the final audit judgments made by the engagement team after the review, but did not verify the appropriateness and sufficiency of such additional procedures by inspection of the audit documentation. Thus, the audit firm did not perform effective reviews.

(Quality Control Standards Committee Statement No. 1, paragraphs 41–43)

Points to Note

It must be noted that even when an audit firm entrusted an external CPA to perform EQC reviews, the external CPA is expected to produce the same response as when a person within the audit firm is appointed as the EQC reviewer.

The EQC reviewer must pay attention to the fact that he/she is required to objectively evaluate the contents of the explanations by the engagement team with records and by carrying out examinations through audit documentation.
In particular, where EQC reviewer at the headquarters reviews audit engagements performed by a regional office through a video conference, necessary audit working papers have to be submitted to the EQC reviewer in advance.
Points of focus

The monitoring of the QC system plays an important role in the maintenance and improvement of audit quality as a process to voluntarily identify and understand deficiencies relating to the QC system and to address such deficiencies. For this reason, audit firms are expected to perform ongoing monitoring of the QC system to ensure the appropriate establishment and implementation of policies and procedures relating to the QC system; and to perform periodic inspections of completed audit engagements in a specified period for each engagement partner.

In consideration of the above, the CPAAOB inspects whether monitoring of the QC system is effectively functioning from the following perspectives, in view of the importance of functions of QC system monitoring:

- Whether the audit firm assigns as the person responsible for the monitoring of the system of QC a person with appropriate experience for the role, and vests the assigned person with sufficient and appropriate authority;
- Whether the audit firm appropriately grasps the status related to the establishment of a quality control system and has an inspection environment in place to identify quality control problems closely;
- Whether the audit firm evaluates the impact of deficiencies identified in the process of ongoing monitoring, and takes appropriate improvement measures in accordance with the results of such evaluation.

The CPAAOB also inspects the implementation status of periodic inspections of audit engagements at audit firms from the following perspectives:

- Whether the audit firm ensures that the person in charge of periodic inspections performed in-depth inspections to confirm whether the audit evidence was sufficient and appropriate, for example, by making inquiries of the professional staff, etc., and inspecting audit documentation, not only by formal inspection using the checklist, etc.;
- Whether the audit firm selects target duties for periodic inspections by fully taking into account deficiencies in the audit procedures identified during the QC review, the CPAAOB’s inspection or other occasions;
- Whether the audit firm evaluates the impact of deficiencies identified as a result of inspections, instructs the relevant engagement partner to take improvement measures, and checks that the measures taken were appropriate;
- Whether the audit firm analyzes the deficiencies identified as a result of inspections, and communicates the result of the analysis throughout the firm.

Outline of inspection results

As shown in the case example section below, there are cases where practitioners responsible for
ongoing monitoring and periodic inspection (including external practitioners) merely performed reviews with checklists, etc., and the PICOQC did not provide practitioners with instructions prior to the inspection or did not conduct monitoring of them after the inspection. There are also many QC system operational deficiencies where the audit firm was not able to appropriately identify deficiencies in individual audit engagements through periodic inspections.

The primary causes of these deficiencies include the lack of appropriate understanding of QC system monitoring at the audit firm, as well as the failure to ensure sufficient time and resources as a result.

**Expected response**

Audit firms are required to establish and maintain a system in which the primary function of monitoring the system of QC (i.e., voluntarily identifying, understanding, and correcting problems) can be fully exercised. Specifically, audit firms should fully keep in mind that they need to carefully select individual audit engagements and identify inspection items by taking into account the economic environment, the business condition of the audited company, and results of the last CPAAOB inspection and QC review; and they also need to have eligible periodic inspection practitioners perform inspections in addition to formal inspections conducted according to the checklist and to establish environment to confirm the adequacy of the improvement measures taken for deficiencies found by the inspection.

**Case 1: Effectiveness of ongoing monitoring**

- The PICOQC only operated an annual ongoing monitoring by using the checklist indicated as the JICPA’s template as a formality. The PICOQC did not perform an effective ongoing monitoring, such as confirming related internal rules and documents.
  (Quality Control Standards Committee Statement No. 1, paragraph 47)

- The person in charge of ongoing monitoring entrusted all inspections to an office staff member and did not give to the office staff members specific instructions about ongoing monitoring. The checklist used by the office staff member for ongoing monitoring only indicated conclusions. The person in charge of ongoing monitoring did not check what procedures were taken by the office staff member for the ongoing monitoring. Thus, the firm’s ongoing monitoring did not work effectively.
  (Quality Control Standards Committee Statement No. 1, paragraph 47)

**Case 2: Effectiveness of periodic inspections**

- The PICOQC did not give instructions to the person in charge of cyclic inspections regarding important inspection points and points to remember when performing the cyclic inspections. Thus, the person in charge of cyclic inspections inspected the sufficiency of the audit procedures taken by the engagement teams only by the inspection using a checklist as a
formality. The person in charge of cyclic inspections did not perform inspections of whether the audit plan had been developed based on a risk-based approach. He/she did not perform an inspection of the audit of accounting estimates, either. As a result, the person in charge of cyclic inspection failed to find deficiencies identified in the QC review. Thus, the firm could not find or control significant deficiencies in individual audit engagements through cyclic inspections.

(Quality Control Standards Committee Statement No. 1, paragraph 47)

- The PICOQC had acknowledged that improvement recommendation items were identified at a QC review for an individual audit engagement, for which no deficiencies were found at a periodic inspection performed prior to the QC review. However, the PICOQC did not re-evaluate the effectiveness of the periodic inspections.

(Quality Control Standards Committee Statement No. 1, paragraph 47)

- The person in charge of periodic inspection was to perform periodic inspections and ascertain the improvement status of deficiencies identified in the previous QC review. However, he/she did not sufficiently verify the argument by the engagement team as to whether sufficient audit procedures were performed.

(Quality Control Standards Committee Statement No. 1, paragraphs 50–51)

**Points to Note**

In addition to the above, there were deficiencies in the selection of inspection, such as the audit engagements of certain engagement partners not being subject to periodic inspection.

It should be noted that even when an external CPA was appointed as the person in charge of periodic inspections, the external CPA expected the same response as when a person within the audit firm is appointed as the EQC reviewer.

It is important to analyze the deficiencies identified in a QC review, and re-evaluate whether periodic inspections were effectively performed to ascertain whether the identified deficiencies could have been prevented or noted beforehand.
(1) Cooperation between Independent Auditors and Company Auditors

**Points of focus**

Independent auditors and company auditors are obligated to ensure the appropriateness of financial statements under the Companies Act and applicable laws. To perform this obligation, it is important that they cooperate by sharing information identified during audits at an appropriate time, as well as by actively exchanging information and opinions, where, for example, company auditors should evaluate the status of QC of audits undertaken by accounting auditors.

In consideration of the importance of cooperation between accounting auditors and company auditors as mentioned above, the CPAAOB inspects the status of such cooperation.

**Outline of inspection results**

The necessity of cooperation between independent auditors and company auditors has been recognized in general. Regular communications between them are conducted, though the depth of cooperation varied.

It is our understanding that audit firms report results of the CPAAOB inspection and QC review to company auditors in writing as determined on a timely manner. On the other hand, there were some cases where, although audit firms received notification of the results of a special review from the JICPA, they did not communicate the results of the special review, since there were no particular identified deficiencies.

**Expected response**

The necessity and importance of cooperation between accounting auditors and company auditors has been recently emphasized again in response to the occurrence of fraudulent corporate financial reporting cases. The audit standards state, “the auditor must ensure appropriate cooperation, through consultation or otherwise, with company auditors at each stage of the audit.”

Audit firms and company auditors of the audited company should improve the effectiveness of the audit by sharing audit-related information with each other, including development of the audit plan and implementation of audit procedures, the progress of the audit at each stage of forming the auditors’ opinions, and the conditions of the audited company discovered in the course the audit. They should also actively promote cooperation with each other through exchange of opinions on audit quality issues based on the results of the CPAAOB inspection and the QC review. It is believed that this cooperation will contribute to securing and enhancing audit quality, and in turn improve and strengthen the corporate governance of the audited company.
Audit firms must also establish a system to support engagement teams so as to promote appropriate communication between the engagement teams and company auditors of the audited company.

It should be noted that the Auditing Standards Committee Statement No. 260 “Communication with Company auditors,” revised in May 2015, stipulates that when performing an audit of an audited company, the audit firm should keep close communication with company auditors in the audited company regarding particularly important matters, and specifies matters that should be communicated to company auditors, including the content and method of communication to company auditors concerning the results of the QC review or the CPAAOB inspection as part of explanations made by the accounting auditor regarding the establishment and operation of a quality control system (Notes 1 and 2).

(Note 1) Disclosure of the results of the CPAAOB inspection to a third party needs the advance approval of the CPAAOB, in principle. However, no advance approval of the CPAAOB is necessary if the disclosure is made to those charged with the governance or equivalent of the audited company and the disclosed information is “whether or not there were deficiencies in the establishment or operation of the quality control system of the audit firm and the outline of such deficiencies” or “whether or not there were deficiencies related to the engagement for the audited company and the outline of such deficiencies.”

(Please refer to “III. Handling of Inspection Results” in the “Basic Policy for Inspections Performed by the Certified Public Accountants and Auditing Oversight Board” published by the CPAAOB in April 2015.)

(Note 2) In principle, any disclosure, including whether or not the audit firm received the CPAAOB’s inspection, is not permitted during the inspection.

(2) Response to Detection of Fraud/ Non-Compliance

Points of focus

In the event of discovering any fact that may affect ensuring the appropriateness of financial statements of the audited company, the auditor must notify company auditors thereof so as to encourage the audited company to implement voluntary corrective action (see Article 193-3, FIEA). In light of the important role played by such notice for ensuring the appropriateness of financial statements, the CPAAOB inspects the status of how the audit firm responded to the detection of fraud or non-compliance.

Outline of inspection results

(Observed effective efforts)

Some effective efforts observed in our inspections were: when regulations regarding responses to
detected facts such as legal violations were introduced under FIEA, some audit firms ensured all
partners understood them by, for example, showing to partners and employees cases of how to notify
those charged with the governance of the audited company in the case of the detection of facts such as
an illegal act.

In addition, there were cases where the audit firm notified the audited company under Article 193-3
of FIEA of a matter deemed to affect the appropriateness of its financial statements, and the notification
led to the audited company’s correction of its quarterly report and strengthening of its organizational
structure aiming at implementing appropriate disclosure.

**Expected response**

It should be kept in mind that in the event of identifying any deficiency during an audit that may
affect the appropriateness of financial statements, audit firms should respond to such deficiency by
requiring audited companies to make corrections, including reviewing whether to give notice under
Article 193-3 of FIEA.

Furthermore, it is necessary for audit firms to develop a system to support engagement teams so that
the engagement teams’ responses to consultation can be carried out appropriately.
III. Individual Audit Engagements
Audit Engagement Performance

Summary
Examples of deficiencies in individual audit engagements identified during the CPAAOB’s inspections broadly cover audit planning through to the formulating of Auditor’s Opinions.

This section, “III. Individual audit engagements,” explains those deficiencies with a composition similar to the Auditing Standards Committee Statements.

However, this part also contains separate items that introduce fraud in financial statement audits, for which cautious responses are required under the Fraud Risk Response Standard and to which attention is paid due to recent accounting fraud scandals. In addition, accounting estimates, in which many deficiencies are continuously identified, are separately introduced.

Furthermore, audits of internal control over financial reporting, in which different audit standards are applied from those applied for audits of financial statements, are introduced in a separate item, including contents of the use of internal audits (Auditing Standards Committee Statement No. 610).

Each item describes the Points of Focus in inspection, etc., along with examples of identified deficiencies, and Points to Note in performing audit procedures are appended for reference.

Analysis of deficiencies
Deficiencies identified in individual audit engagements result from lack of requirements of audit standards or standards of the Auditing Standards Committee Statement (“requirement(s)”).

Causes of the deficiencies include various factors that are remotely due to engagement teams and the environment surrounding audited companies. However, in recent cases the following three causes were found relatively frequently:

• Insufficient consideration for the relevance and sufficiency of audit procedures
• Lack of an attitude of professional skepticism required of an auditor
• Insufficient knowledge of audit standards and the Auditing Standards Committee Statement

(i) Cases of deficiency due to insufficient consideration for the appropriateness and sufficiency of audit procedures

(Reference case) Extent of test of details—Case where the appropriateness and sufficiency of audit procedures were not evaluated

The engagement team evaluated that there was a risk of material misstatement due to fraud for the occurrence of sales in a significant component, and identified revenue recognition as a significant risk. During the period, the team performed a dual-purpose test for operation evaluation procedures of internal controls concerning the sales process and substantive procedures, and tested them with internal vouchers of shipment. Apart from the above procedures, the team tested dozens of items with the vouchers for the three months prior to the balance sheet date.
However, the engagement team did not evaluate whether the audit evidences obtained from the audit procedures were sufficient and appropriate for the risk of material misstatement due to fraud. (Auditing Standards Committee Statement No. 240, paragraphs 29 and F32-3)

When performing audit procedures, it is required under audit standards to develop and perform procedures to responses to the identified audit risks based on risk assessment. The nature, timing and extent of specific procedures responding to audit risks are determined based on the professional judgment of the engagement team, in light of the situation of the audited company. In particular, it is required that procedures in response to assessed risks at the assertion level are formulated in a detailed audit plan.

However, there are many cases where it is not clear whether sufficient appropriate audit evidences were obtained from audit procedures performed by engagement teams. This resulted from that engagement teams did not sufficiently consider audit procedures at the following two stages:

- Risk assessment at the audit planning stage
  Auditors did not appropriately plan the responses to audit risk at the assertion level, since risk assessment by the auditors was insufficient in itself.
  Furthermore, there were many cases where sufficient appropriate audit evidences were not obtained since the responses to audit risks considered at a detailed audit plan were not appropriate to the identified risks, although the risks were appropriately identified.

- Evaluation of obtained audit evidences
  Auditor have to conclude whether sufficient appropriate audit evidences have been obtained. If not, he/she needs to perform additional audit procedures. Auditors shall ascertain whether sufficient appropriate audit evidences have been obtained through reviews of working papers, there are cases where such obtained audit evidences were not sufficiently evaluated.
  With regard to risks of material misstatement at the assertion level, auditors shall note that they are required to obtain competent and strong audit evidences, or more evidences if any, comparing cases where no risk of fraud is identified for the assertion.

(ii) Cases of deficiency due to the lack of a professional skepticism that an auditor should have

(Reference case) Audit of accounting estimates—Case where the audit firm only understood accounting estimates argued by the audited company but did not perform audit procedures that should have been performed in response to the argument.

The audited company accounts for deferred tax assets, excluding the future deductible amount that is collected over a period of more than five years based on profit plans that assume that the profit before income taxes’ budget for the next fiscal year continues for the next five years.

However, the engagement team did not consider the feasibility of management’s assumption that the same amount of profit before income taxes would be generated from the second year until the fifth year,
despite comparing the profit plan with the amount in the budget that was submitted to the Board of Directors when considering the collectability of deferred tax assets. (Auditing Standards Committee Statement No. 540, paragraph 12)

In this case, a deficiency in audit procedures was identified since the argument of management, such as the feasibility of the business plan that was used in accounting estimates, was not evaluated objectively and procedures to verify the rationality of the argument were not performed, even though the engagement team understood the management’s assumption and the adequacy of accounting, due to a lack of professional skepticism. Similarly, at some audit firms there were cases where audit procedures were deemed insufficient since a material misstatement risk was overlooked due to the lack of professional skepticism.

Apart from the above cases, there were cases where, although journal entry tests were performed as responses to audit risk related to management override, and certain journal entries were selected, auditors did not note irregular items in the selected journal entries and did not verify their adequacy. Auditors need to pay attention to the possibility of material misstatement due to fraud and retain a professional skepticism throughout the entire audit process, regardless of the auditors’ past experience concerning the reliability and sincerity of management, directors and company auditors.

(iii) Cases of deficiency due to insufficient knowledge of the requirements

(Reference case) Substantive analytical procedures—Case of failure to respond to requirements

The engagement team mentioned that they performed substantive analytical procedures for account balances over performance materiality including sales, cost of sales, and selling, general and administrative expenses. However, the team did not set the acceptable level of difference between expectation and actual amounts, and thus did not satisfy the requirements of substantive analytical procedures. (Auditing Standards Committee Statement No. 520, paragraph 4)

In the above cases, the following requirements, which are required when adopting substantive analytical procedures, were not met. Therefore, a deficiency of failure to perform substantive procedures was identified.

- Develop the expectation of booked amounts or ratios and evaluate whether the expectation is sufficiently precise to identify a misstatement that, individually or when aggregated with other misstatements, may cause the financial statements to be materially misstated.
- Determine the acceptable level for differences of booked amounts from expectation without further investigation.

When performing audit procedures, if the engagement team does not fully understand the requirements, and requirements are not satisfied in the audit procedures performed, the purpose of audit
cannot be achieved with the performed procedures and it results in a deficiency at audit procedures.

In addition to substantive analytic procedures described as an example, there tend to be many
deficiencies due to the non-performance of requirements in areas such as confirmation procedures
(Auditing Standards Committee Statement No. 505), development and implementation of audit
sampling (Auditing Standards Committee Statement No. 530), management bias in accounting
estimates (Auditing Standards Committee Statement No. 540, paragraph 20), audit procedures for
transactions with related parties (Auditing Standards Committee Statement No. 550), audit procedures
on group audits (Auditing Standards Committee Statement No. 600), using the work of Internal
Auditor’s (Auditing Standards Committee Statement No. 610), and using the work of an auditor’s
expert of experts (Auditing Standards Committee Statement No. 620).

**Expected response**

Engagement teams are required to exert professional skepticism in all audit aspects, as well as to
update and expand the required knowledge such as audit standards. Upon this, it is necessary to respond
to individual audit engagements from the perspective of whether sufficient audit plans are developed for
misstatement risks, and whether the audit procedures planned are performed according to the
requirements of standards of audit, such as the Auditing Standards Committee Statement, in order to
reasonably reduce audit risk to a low level.

There continue to be many cases where engagement teams argue “deficiency in audit documentation”
when identifying deficiencies in individual audit engagements. This argument means that the team
actually performed audit procedures but neglected to document them.

In this regard, unless the argument by the engagement team is objectively proven by audit
documentation, etc., it cannot be determined that the audit procedures were completed before issuance
of the audit opinion. Therefore, close attention should be paid so that such cases are treated the same as
when audit procedures were not performed.

Audit firms are required to maintain and enhance the quality of individual audit engagements through
QC systems to prevent the occurrence of deficiencies that were identified in individual audit
engagements.

In order for the penetration and establishment of measures over an entire firm, it may need to
establish environment that monitors each engagement team’s understanding of improvement measures,
as well as the operation status of improvement measures by each engagement team. Upon the
improvement of audit engagements, the use of existing systems including periodic inspections and QC
reviews is also effective, instead of additional new QC systems. Each audit firm is required to try
effective and efficient improvement for audit quality in a way that suits the feature of each firm.

Regardless of the size of the audit firm, some deficiencies in individual audit engagements are caused
by engagement partners with an insufficient understanding of the concept of the risk-based approach. In
this case, it is necessary to note that appropriate responses as an audit firm are required, such as
According to the Auditing Standards Committee Statement No. 260, etc., deficiencies in individual audit engagements identified by the CPAAOB’s inspections need to be explained to those in charge of governance of the audited company that was subject to the inspection. Therefore, each engagement team needs to strive for appropriate understanding of the deficiencies so that it can explain the deficiencies that were identified in the inspection to the audited company.

Once again, it is necessary for not only the engagement teams of the individual audit engagements that were subject to inspection but also other engagement teams to refer to the deficiencies identified in the CPAAOB’s inspections, QC reviews, and periodic inspections within the firm during their own audit engagements and examine/review such deficiencies in a timely manner.
1. Risk Assessment and Response to Assessed Risks

**Points of focus**

The CPAAOB performs inspections of risk assessment and response to assessed risks from the following perspectives:

- Whether the engagement team performs appropriate identification and assessment of the risks of material misstatement in the financial statements as a whole and at the assertion level when it develops an audit plan, considering the audited company and its environment, business risks and internal control of the audited company, instead of merely completing templates provided by the audit firm or the JICPA;
- Whether the engagement team makes appropriate judgment, when it identifies significant risks, in light of matters that are required by the Auditing Standards Committee Statement to be taken into account; and whether the team understands internal control relevant to significant risks;
- Whether the engagement team develops an overall response required by the Auditing Standards Committee Statement in accordance with the assessed risks of material misstatement in the financial statements as a whole, and plans the nature, timing, and extent of procedures in response to the audit risks, taking into account the materiality, in accordance with the assessed risks of material misstatement at the assertion level;
- Whether the engagement team makes appropriate responses, when a misstatement is identified as the audit progresses, such as judging whether it is necessary to revise the overall audit strategy and detailed audit plans, and evaluating the impact of the uncorrected misstatement;
- Whether the engagement team develops an audit plan suited to the contractor and IT use status considering the influence of the contractor and IT used by the audited company for the audit.

**Outline of inspection results**

There were many cases in assessing risks and responding to assessed risks where the engagement team did not appropriately develop and perform procedures responding to assessed risks because the engagement team did not carry out an appropriate assessment of risks.

For example, there were cases where a deficiency arose in the tests of effectiveness for internal controls and substantive procedures because the engagement team did not plan appropriate procedures in responses to audit risk, or a deficiency was caused in the application, timing and extent of year-end substantive procedures as a result of the failure to appropriately consider revising the audit plan when an uncorrected misstatement was identified or changes occurred in the audited company’s business environment.

Moreover, there were still engagement partners and audit assistants who did not fully understand the concept of a risk-based approach. Therefore, there were several cases where the engagement team merely completed templates, such as the “audit tool” and the “documentation sample forms” provided by the audit firm or the JICPA, and did not perform appropriate risk assessment. There were also cases
where the nature, timing and extent of the procedures actually taken in response to the assessed risks did not respond to the risks since the engagement team did not examine the adequacy of the procedures in the audit plan developed by using audit tools.

In addition, at audited companies with many related party transactions of various types, there were cases where notes on financial statements for significant related party transactions were omitted since no particular risk was identified, although the risk must be carefully assessed from the perspective of completeness of related party transactions.

**Expected response**

Professional staff should note that they must pay due attention and exercise professional skepticism in fully understanding the audited company and its environment as well as assessing risk through such understanding, and carefully identify and assess audit risks, referring to this Case Report and the Audit Proposals issued by the JICPA. In addition, when developing responses to audit risk, they should carefully consider whether the procedures respond to the assessed risks and whether the procedures enable sufficient appropriate audit evidence to be obtained, including not only the types of procedure, but also the timing and the extent of the procedures. In order to do so, they should make sure sufficient hours are spent for not only substantive procedures but also for the audit plans.

Furthermore, some professional staff still do not recognize the importance of audit planning and have no understanding of the theoretical background that the material misstatement risks and the details of the procedures responsive to the assessed risks, i.e., the nature, timing and extent of the procedures, can be connected with audit planning.

Engagement teams must reconfirm the concept of the risk-based approach and the positioning of the audit plan in the current audit, and review the audit plan that they developed, according to the situation.

Once again, an audit firm where deficiencies were identified in risk assessment and responses to the assessed risks must consider appropriate responses, such as re-educating professional staff who have failed to catch up with the current audit standards and responding in terms of the personnel allocation of engagement teams.

(1) Audit planning

**Case 1: Detailed audit planning**

The engagement team did not establish a detailed audit plan for accounts receivable related to the collectability of credits and allowance for doubtful accounts, although they identified the collectability of credits owned by the audited company’s subsidiary as a significant risk.

(Auditing Standards Committee Statement No. 300, paragraph 8)
Points to Note

As deficiencies in audit planning, there were cases where the engagement team only followed audit procedures in the past as a formality and did not appropriately develop a detailed audit plan such as the nature of audit procedures that should be performed by engagement team members.

The engagement team shall carefully consider the timing and extent of audit procedures responsive to the assessed risks of material misstatement, as well as the nature of audit procedures, regarding whether the developed audit procedures correspond to the assessed risks and whether sufficient appropriate audit evidence has been obtained from those audit procedures.

In addition, an appropriate audit plan enables the following matters to be achieved. Therefore, it is important to consider these matters at the planning stage.

- Appropriate attention to significant areas of audit
- Identification and solution of potential issues in a timely manner
- Conduct of an effective and efficient audit through appropriate management of audit engagement
- Assignment of appropriate engagement team members
- Instructions to and supervision of team members, reviews of working papers
- Cooperation with component auditors and specialists

Case 2: Changes to planning decisions during the course of the audit

In the audit plan developed at the beginning of the fiscal year, the engagement team designed and performed substantive procedures for each material class of transactions, account balance, and disclosure, based on figures from the financial statements for the previous fiscal year.

However, the engagement team did not consider the necessity to revise the audit plan, such as re-assessment of materiality, although there were changes in the business environment and worsening of the business performance of the audited company during the fiscal year.

(Auditing Standards Committee Statement No. 300, paragraph 9)

Points to Note

In addition to the examples of identified deficiencies mentioned above, there was a case where an engagement team did not consider whether their audit plan should be revised including risk assessment and materiality when events, which the engagement team did not expect, occurred, such as changes in business activities due to the reorganization of the audited company, the occurrence of fraud cases, significant overdue receivables and slow-moving inventories. If an engagement team obtains information, which significantly differs from original information used at the planning stage, the team should consider whether the plan should be revised.
(2) Identification and assessment of the risk of material misstatement through understanding the audited company and its environment

Case 1: Understanding the audited company and its environment, including the audited company’s internal control

The engagement team identified that the audited company conducted a merchandise sales business in addition to a product sales business as an important profit-making business, and understood that the operation process of each business was different.

Under such circumstances, while the engagement team assessed the existence of a material misstatement risk that should be identified in the product sales business, they did not assess whether material misstatement risk that should be identified existed in the merchandise sales business.

(Auditing Standards Committee Statement No. 315, paragraph 10)

{Points to Note}

As shown in the above example, there were several cases where the engagement teams did not identify and assess the risks of material misstatement by the classes of transactions, although there was a possibility that audit procedures performed and audit evidences obtained would not be appropriate due to the difference in the class of transactions within the same account, since the engagement teams did not identify misstatement risks by the operation process.

There were several cases where the engagement team did not identify and assess the risks of material misstatement at the assertion level considering differences in the class of transactions and relevant internal controls when identifying and assessing those risks. There were also cases where the audit firm understood the individual businesses of significant components, including its subsidiaries, but did not understand these businesses and their transactions at the group level.

Case 2: Identifying and assessing the risks of material misstatement

Although the engagement team identified a transaction where listed shares held by the audited company and its subsidiary were sold to a large shareholder who was a related party not directly related to the business of the audited company’s group as an unusual significant transaction with a related party, they did not identify it as a significant risk.

(Auditing Standards Committee Statement No. 550, paragraph 17)

Case 3: Identifying and assessing significant transactions with consolidated subsidiaries

The audited company received a sales order from its consolidated subsidiary for the construction of a power plant to be used by the subsidiary for its power generation business. With regard to the transaction, its sales and costs were recorded in the same amount on the audited company’s non-consolidated financial statements. Although professional staff documented that the audited company was involved in the power plant construction as an
agent of the construction contract, the engagement team did not examine the reasonableness of recording the sales on a gross basis instead of a net basis.

In addition, sales for the transaction were subject to notes on related parties in the financial statements, which stated that the transactions terms “are determined negotiations on the price based on market condition.” However, the engagement team did not examine the adequacy of this statement, although the construction contract had unusual transaction terms, which the same amount of the construction costs incurred at the audited company was charged to the consolidated subsidiary that was the contractee.

(Auditing Standards Committee Statement No. 550, paragraphs 23–24)

**Points to Note**

The engagement team shall note that they need to identify and assess the risks of material misstatement through an understanding of the audited company and its environment, considering unusual significant transactions, related party transactions and matters dependent on management’s judgments.

Furthermore, through an understanding of the audited company and its environment, the engagement team shall ensure that it assesses whether the audited company’s accounting policies are appropriate for its business, comply with the applied financial reporting framework, and are consistent with accounting policies that are adopted in the industry to which the audited company belongs.

**Case 4: Understanding of the audited company’s internal controls for significant risks**

Although the engagement team identifies valuation of the shares in affiliates as a significant risk at the assertion level, they did not perform procedures to understand the internal controls for the risk, including control activities.

(Auditing Standards Committee Statement No. 315, paragraph 28)

(3) The auditor’s responses to assessed risks

**Case 1: Audit procedures for risks of material misstatements due to fraud**

The engagement team explained that they had identified risk of material misstatement due to fraud in revenues recognition, assumed the fraud risk scenario including a concrete way to conduct the fraud based on their understanding of the audited company and its business environment, and developed their audit plan. Specifically, the engagement team assumed that the audited company would record fraudulent sales with cash paid by the related party and reversed the sales with reimbursement in the following year.

However, the engagement team did not fully plan and perform substantive procedures directly responsive to fraud risks, such as by conducting detailed tests that focused on transactions with related parties. As a result, they did not obtain audit evidences that were more competent and appropriate than in cases where no risk of fraud was identified.

(Auditing Standards Committee Statement No. 240, paragraph 29; and No. 330, paragraphs 5
When planning audit procedures responsive to assessed risk, auditors shall plan audit procedures to obtain sufficient appropriate audit evidences corresponding to the material misstatement risks at the assessed assertion level, considering the nature of related class of transactions and account balances, and the relevant internal controls.

In particular, auditors shall note that they are required to obtain audit evidences, which are more compete or appropriate, for risks of material misstatement due to fraud, than in cases where no risk of fraud is identified for the assertion.

Engagement teams shall also note that they need to plan and perform substantive procedures for a significant class of transactions, account balance and disclosure regardless of the assessment of material misstatement risks, because they may not identify all risks of material misstatement and there are inherent limitations of an audit including management override on internal controls.

Case 2: Adequacy of presentation and disclosure

- The engagement team overlooked the fact that rental properties held for investment purposes were not classified and presented as investment and other assets. Moreover, the team did not consider the rationality of presenting the entire amount of fixed assets for use not only for sales but also for rent as property, plant and equipment.
  (Auditing Standards Committee Statement No. 330, paragraph 23)

- The audited company summarized related party transactions at a list and disclosed transactions that exceeded a certain level of materiality as notes in the consolidated financial statements, in accordance with Corporate Accounting Standards Implementation Guidance No. 13. However, the engagement team overlooked the fact that the transactions were not included in the list of related party transactions, regardless of that the team could note related party transactions, such as transactions guaranteed by directors.
  In addition, as for transactions with companies owned by an equivalent to a director, the engagement team overlooked the fact that significant related party transactions were not disclosed at the notes. It was because that “case where the related party is a corporation” was applied to determine the materiality in the disclosure of notes for related parties, instead of “case where the related party is an individual,” which is stipulated in Corporate Accounting Standards Implementation Guidance No. 13.
  (Auditing Standards Committee Statement No. 550, paragraphs 14, 16, and 20; Corporate Accounting Standards No. 13, paragraph 10; Corporate Accounting Standards Implementation Guidance No. 13, paragraphs 8, 9, and 16)
Other than the above, there were cases where the engagement team did not examine the adequacy of the presentation of segment classification, which did not follow the management approach, or where the engagement team overlooked an error in the presentation on a cash flow statement. Many deficiencies were identified in the presentation and disclosure.

Engagement teams should plan and perform audit procedures to examine whether the overall presentation of financial statements, including related disclosures, complies with the applicable financial reporting framework. They shall note that disclosure of related parties, in particular, needs to provide appropriate information so that users of financial statements can understand the impact of transactions between companies and related parties or the existence of related parties on financial statements.

4) Audit considerations relating to an audited company using a service organization

Case 1: Obtaining an understanding of the services provided by a service organization, including internal control

The audited company used an external warehouse to manage its inventories, including shipment and acceptance as the Service Organization.

Under such circumstances, the engagement team did not understand how the audited company used the operations of the warehouse, which is the service organization. Moreover, in understanding internal controls relevant to audit, the engagement team did not assess the design of the audited company’s internal controls relevant to the services provided by the warehouse and the application of the controls to the service.  
(Auditing Standards Committee Statement No. 402, paragraphs 9–10)

Case 2: Audit evidence regarding the effectiveness of internal controls in the service organization

The audited company uses a network system developed by a service organization as an IT system for its important business operation processes. The audited company had obtained the auditor’s report on a description of the service organization’s system, the suitability of the design of controls, the application of the controls to the service, and the operating effectiveness of controls.

However, the engagement team only inspected this report obtained by the audited company and did not perform assessment of the service, such as assessment of the adequacy of the assessment procedures taken by the auditor of the service organization.  
(Auditing Standards Committee Statement No. 402, paragraph 16)

If the audited company uses the services of one or more service organizations, the engagement team shall understand how the audited company uses the services provided by a service organization in the audited company’s operations. Meanwhile, when understanding the internal control related to auditing,
the engagement team shall assess the development status and operating effectiveness of relevant controls at the audited company that relate to the services provided by the service organization. Note that these are required to be performed not only in financial statement audits but also in audits of internal control over financial reporting.

Since the migration of systems to the cloud has been progressing recently, audit firms must often judge which of the audited company (user entity) and the service organization is responsible for the internal control over the underlying operations for the financial reporting, depending on the contents and the mode of service that the service organization provides for the audited company. Audit firms need to fully understand the contents of services provided by service organizations and their importance, and their impact on the internal control over financial reporting.

(5) Evaluation of misstatements identified during the audit

Case 1: Examination of identified misstatements during the audit

In the examination of variances identified in the external confirmation procedures for the accounts receivable, the engagement team identified an error in the audited company’s process.

However, the team did not consider whether the risk assessment of sales and the accounts receivable or the substantive procedures originally planned for the remaining period should be changed. The engagement team did not examine the impact of the error on the audit of the internal control over financial reporting, either.

(Auditing Standards Committee Statement No. 450, paragraph 5)

Case 2: Evaluating the effect of uncorrected misstatements

The audited company included a prior year’s adjustment in non-operating expenses and did not restate its financial statements retrospectively. The engagement team did not examine the reasonableness of the above accounting since the amount of the prior-year adjustment was less than materiality and the team lacked awareness of the need to carefully examine treatments in audits. Therefore, the team did not examine the adequacy of temporarily recognizing the adjustment as profit of the current term. In addition, they did not ask the audited company to state the items at a summary of unadjusted misstatement, which was attached to the management representation letter.

(Auditing Standards Committee Statement No. 450, paragraph 13; and Corporate Accounting Standards No. 24, paragraphs 21 and 35)

Points to Note

Auditors shall judge whether the overall audit strategy or detailed audit plans should be revised when the nature of the identified misstatements and the circumstance that may indicate the possibility of other misstatements, and when there is possibility that the aggregation of other misstatements might
become a material misstatement.

Moreover, it is necessary to consider the necessity of the above revision when the total amounts of the misstatements that were aggregated during the audit are close to the materiality in the latest audit plan.

Furthermore, auditors shall examine the identified misstatements individually or aggregately and judge whether the uncorrected misstatements are material. In doing so, they shall consider the size and nature of the misstatements against the financial statements as a whole and the related class of transactions, account balance or disclosure, as well as the specific circumstance in which the misstatements occurred. In cases where past-year uncorrected misstatements occurred, auditors must also take into full account their influence on the financial statements as a whole and the related class of transactions, account balance or disclosure.

(6) Identifying and assessing the risks of material misstatement for the information system and procedures responsive to assessed risks

Case: Development of an audit plan for the use of IT systems

The engagement team only inquired if there were significant changes from the previous year in its understanding of the general structure of IT use in mission-critical systems for sales and purchase operations, and did not perform procedures for understanding the stability of information systems, the overview of IT infrastructure and the degree of IT use, etc.

Moreover, the engagement team did not consider whether they should use an IT specialist although there was no one on the team who had sufficient knowledge of IT.

(Auditing Standards Committee Statement No. 315, paragraphs 17 and 20; IT Committee Practical Guidelines No. 6, paragraph 4)

Points to Note

Business enterprises use information systems for their business operations. Through understanding the status, characteristics and operation of the information systems of the audited company, the engagement team can properly identify and assess the risks of material misstatements resulting from those systems. There were some cases in which the audit firm judged that the potential material misstatement risk was low without understanding the general structure of those IT systems. When developing an audit plan, audit firms should understand the IT-related environment of the audited company, and identify IT systems that should be included in the assessment for risks of material misstatement.

Moreover, when understanding the general structure of IT systems of an audited company at a group audit, auditors shall be careful not to omit significant components. In addition, auditors need to develop an appropriate audit plan by considering how the accounting policies and the control environment of the audited company, including the year-end closing process, are reflected in or associated with the IT systems.

Furthermore, when using various lists generated by the audited company’s information system for the tests of controls or substantive procedures, the engagement team shall evaluate the accuracy and
completeness of the information. Depending on the degree of IT use by the audited company, the engagement team may need the support of IT specialists and incur considerable time to complete the audit. Therefore, the engagement team should note that it needs to develop an audit plan for the above procedures at an early phase.
2. Audit Evidence

Points of focus
Auditors should assess information obtained as audit evidence considering its relevance and reliability. The CPAAOB inspects whether the engagement team has designed and performed audit procedures to obtain sufficient appropriate audit evidence to draw reasonable conclusions on which to base the auditor’s opinion from the following perspectives:

- Whether the engagement team obtains appropriate audit evidence responsive to the assessed risks of material misstatement at the assertion level, rather than only focusing on the quantitative sufficiency of audit evidence;
- Whether the engagement team performs further in-depth responses to audit risk to reduce audit risk to an acceptably low level for significant risks;
- Whether the engagement team performs appropriate audit procedures in individual situations as tests of controls and substantive procedures;
- Whether the engagement team assesses whether the information prepared by the audited company and information prepared by the management’s experts is sufficiently reliable.

Outline of inspection results
The following examples of identified deficiencies, as pointed out in the past year, are also frequent in the current year:

- The audit procedures performed and audit evidence obtained were not relevant to the assessed risks of material misstatement.
- The engagement team identified significant risks but did not perform substantive procedures that responded individually to the risks.
- The engagement team identified inconsistencies and irregularities with other audit evidence but did not determine the necessity of additional audit procedures.
- The engagement team only performed annual comparisons and monthly fluctuation analyses. The procedures performed by the engagement team as substantive analytical procedures did not meet the requirements for substantive procedures because they did not assess the nature and relevance of the data to be used for developing expectations of recorded amounts, etc.
- In sampling for the audit procedures in response to the assessed risk, the engagement team did not select samples from the appropriate selection range to reach a conclusion for the entire population.
- When using information prepared by the audited company, the engagement team did not evaluate whether the information had sufficient reliability for audit purposes.

For more information in responses to audit risk for revenue recognition, also see items (2) “Identifying and assessing the risks of material misstatement due to fraud” and (3) “Response to assessed the risks of material misstatement due to fraud” in “6. The Auditor’s Responsibilities Relating to Fraud in Financial Statement Audits.”
Expected response

The engagement team needs to assess appropriately whether they have obtained sufficient audit evidence relevant to the purposes of audit procedures to respond to identified risks. Particularly, for significant risks, the engagement team shall perform substantive procedures individually.

Many examples of identified deficiencies in relation to obtaining sufficient appropriate audit evidence resulted from the engagement team’s failure to appropriately perform risk assessment and response to audit risk, and the team’s lack of in-depth understanding of the audited company’s business for the fiscal year subject to audit (See paragraph titled “Expected response,” in “1. Risk Assessment and Response to Assessed Risks” in Chapter III).

In many other cases, the engagement team appropriately performed risk assessment and designed audit procedures to respond to the assessed risk but the engagement partners neither gave specific directions nor exercised specific supervision. Professional staff therefore performed only conventional audit procedures, leading to a lack of organic coordination between the audit plan and actual audit procedures. Thus, when auditing the audited company, the engagement team should, through the audit period, gain a deep understanding of the audited company and its business environment and sufficiently discuss the risk assessment and audit procedures to be performed. The engagement team should also comprehensively evaluate the sufficiency and appropriateness of audit evidence obtained through the review of audit documentation.

The engagement team should respond to similar cases in each audit engagement, not adhering to the cases but considering the points of the cases, because audit evidence is obtained in various phases.

(1) Matters common to audit evidence

Case 1: Sufficient appropriate audit evidence (sufficiency of audit evidence)

- In the assessment of the effectiveness of internal controls concerning the completeness of sales rebates that were identified as a significant risk, the engagement team used the results of assessment related to internal control that was performed by the internal auditors of the audited company, whose fiscal year-end is March 31. The internal auditors selected sampling items from the period subsequent to September at their assessment because there was a change in control activities relating to sales rebates in September.

  However, the engagement team did not plan and perform additional tests of effectiveness of internal controls as an assessment of internal controls in financial statement audits, although the period from April to August was not subject to tests of effectiveness of internal controls for a financial statement audit.

  (Auditing Standards Committee Statement No. 330, paragraph A19; and No. 500, paragraph 9)

- As for the occurrence and accuracy of sales with credit cards, the engagement team performed confirmation procedures for several of the balances of accounts receivable as of the
balance sheet date, and vouched all unconfirmed accounts to the reports that the audited company obtained from credit card companies.

Audit evidences of the credit sales obtained from the confirmation procedures were for the sales in the latter half of the year-end month. However, the engagement team did not consider the necessity of additional substantive procedures for the credit sales related to the period between the beginning of year and the first half of the year-end month, which is not subject to examination.

(Auditing Standards Committee Statement No. 500, paragraph 9; and No. 530, paragraph 7)

{Points to Note}

As in the above example case of a deficiency, there were cases where tests of effectiveness of internal controls and substantive procedures were performed only for part of the period subject to audit, as well as cases where substantive procedures were not planned and performed for selling, general, and administrative expenses identified as a risk of material misstatement.

When performing tests of effectiveness of internal controls and substantive procedures, auditors are required to determine the period that should be subject to audit procedures in consideration of account balances and assertions. In audit procedures for the occurrence and accuracy related to items in the statement of income, in particular, auditors should note that the items audited over the entire period are subject to the procedures, in general. Furthermore, as in the above case, auditors should note that periods that should be subject to tests of effectiveness of internal controls for financial statement audits differ from period for audit of internal control over financial reporting, in the case where there was a change in internal control activities during the period.

In addition, generally, inquiries without other procedures neither proves that there is no risks of material misstatement at the assertion level, nor obtains sufficient audit evidences as to the effectiveness of internal controls; however, there were cases where the engagement team completed audit procedures by inquiries only. The engagement team needs to perform procedures responsive to assessed risks to corroborate the evidence obtained through inquiry. That applies not only to audit procedures for significant risks but also to audit procedures responsive to audit risk.

Auditors plan substantive analytical procedures, tests of details, or a combination of both as audit procedures for assessed risk, depending on the conditions, but the degree of required responses to audit risks differs depending on the significance of assessed risk.

In one case, the engagement team performed multiple audit procedures, yet the quantitative or qualitative appropriateness of audit evidences was not verified through the planned audit procedures. As a result, it was considered that the team did not obtain sufficient audit evidence to reduce the overall audit risk to a low level.

The engagement team should not perform planned audit procedures for formality, but comprehensively assess the events identified during the audit and the sufficiency as well as the appropriateness of audit evidence obtained through multiple audit procedures.
Case 2: Sufficient appropriate audit evidence—appropriateness of audit evidence

- As audit procedures for completeness of liabilities related to purchase and selling, general and administrative expenses (excluding personnel expenses and depreciation), the engagement team vouched with records at bank accounts related to payments made in the period between the following day of the balance sheet date and 10 days later with supporting documents.

  However, although the cutoff date of payments of liabilities at the audited company was usually at month-end and they were paid at the following month-end, the engagement team did not plan and perform audit procedures for obtaining sufficient appropriate audit evidence on the completeness of liabilities. They needed to examine expanding the period of deposit payment records subject to verification, and verifying whether there were any invoices received on and after the balance sheet date that should have been recorded as liabilities.
  (Auditing Standards Committee Statement No. 500, paragraph 5)

- In verifying the existence and cut-off of sales, the engagement team planned to perform tests on a sample basis for dual purposes, for tests of internal controls and substantive procedures.

  However, the engagement team performed tests only by checking that sales details were sealed by the audited company’s personnel, and failed to perform audit procedures that were relevant to the assertion of the existence and cut-off of sales in which the team identified the risks of material misstatements, such as tracing acceptance forms issued by customers to transactions recorded in the sales details.

  Further, the engagement team did not evaluate whether the number of samples extracted in the tests of controls was adequate to maintain the sampling risk at a minimum acceptable level or to estimate the amount of misstatement in substantive procedures.
  (Auditing Standards Committee Statement No. 330, paragraph 25; and No. 500, paragraphs 5–6)

{Points to Note}

Other than the cases where the engagement team did not obtain audit evidence relevant to the audit purpose, such as above, there were a number of cases where the engagement team, despite the identified fraud risk, often did not obtain appropriate audit evidence relevant to the assessed risks at the assertion level. For example, the team completed audit procedures only by verifying easily available audit evidence such as the internal vouchers of the audited company. The team needs to evaluate the reliability and relevance of audit evidence when planning and executing audit procedures.

When a test of internal controls was also used as a substantive procedure (dual-purpose test), the engagement team did not consider the effectiveness of such test as a substantive procedure. When planning and performing tests of effectiveness of controls and substantive procedures, engagement teams have to consider whether procedures to obtain sufficient appropriate audit evidences, which achieve the
relevant audit objectives, are planned and performed.

Case 3: Consistency between financial statements and audit evidence

The engagement team selected items with haphazard sampling from the annual sales data that was obtained from the audited company, and vouched them to supporting documents as a test of details for the occurrence of sales.

However, the engagement team did not examine the completeness of the annual sales data that was obtained from the audited company as the sample population, such as by comparing it with the sales amount in the financial statements.

(Auditing Standards Committee Statement No. 500, paragraphs 8 and A49; and No. 530, paragraph A5)

Points to Note

As outlined in the case above, the consistency between the financial statements and the audit evidence should be taken into consideration when performing tests of details, which include the verification of completeness of the population from which samples were selected.

Case 4: Work of management’s experts

When determining whether to recognize impairment loss on long-lived assets, the audited company obtained a real estate appraisal report prepared by an external real estate appraiser for the net realizable value.

However, in assessing the appraisal report, the engagement team failed to examine the competence, capabilities and objectivity of the expert used by management. Further, although the audited company used a real estate appraisal report obtained in prior years for certain assets, the engagement team did not examine whether the basic data (rent, discount rate, etc.) was still appropriate for the current year.

(Auditing Standards Committee Statement No. 500, paragraph 7; and No. 540, paragraph 12)

Points to Note

When using the work of the management’s experts (including pension actuary, real estate appraiser, etc.), the auditor needs to evaluate the competence, capabilities and objectivity of such experts, and understand the expert’s work, paying attention to evaluating the adequacy of the expert’s work used as audit evidence in light of related assertions.

Case 5: Accuracy and completeness of information prepared by the audited company

- In the verification of consolidated journal entries related to the elimination of unrealized profit on inventories, the engagement team checked the inventory quantities and profit ratio with information prepared by each division of the audited company.
However, the engagement team did not obtain audit evidence on the accuracy and completeness of the information, and did not assess the reliability thereof.
(Auditing Standards Committee Statement No. 500, paragraph 8)

In verifications related to the valuation of inventories, the engagement team obtained from the audited company a list of slow-moving products, for which valuation losses were recorded, selected items with haphazard sampling from the list, and ascertained whether the valuation losses were recorded in the financial statements.
However, the engagement team failed to examine accuracy and completeness of the list of products needed to be devaluated.
(Auditing Standards Committee Statement No. 500, paragraph 8)

**Points to Note**

There were a number of cases that were mainly identified in the audit of accounting estimates, where the engagement team utilized documents prepared by the audited company as audit evidence without verifying the accuracy and completeness of the information contained in such documents. When using information obtained from audited companies as audit evidence, the engagement team should thoroughly examine the reliability of such information. This includes information generated through information systems.

**Case 6: Timing of substantive procedures (procedures for remaining period)**

The engagement team confirmed the balances of trade receivables and trade payables as of the cut-off date, which was set three months before the balance sheet date. In addition, the team performed a comparative analysis of balances by customers/suppliers and analysis of the turnover of receivables and payables for the remaining period from the cut-off date to the balance sheet date.

However, the audit procedures performed by the engagement team for the remaining period stated above were analytical procedures, instead of substantive procedures for roll-forward from the cutoff date to the balance sheet date.
(Auditing Standards Committee Statement No. 330, paragraph 21)

**Points to Note**

It should be kept in mind that in the case where substantive procedures were performed as of a cut-off date set before the balance-sheet date, additional substantive procedures should be performed for the period from a cut-off date to the balance sheet date to reasonably support the use of audit conclusions of the substantive procedures to cover the remaining period.
(2) External Confirmation

Case 1: Reliability of responses to confirmation request

With regard to a confirmation of receivables and payables not replied from an affiliated company, the engagement team requested, via the audited company, the affiliated company to reply to the confirmation, and then obtain the confirmation via the audited company.

However, the engagement team did not perform additional procedures although they had not directly obtained the confirmation.

(Auditing Standards Committee Statement No. 505, paragraphs 5 and 9)

Points to Note

External confirmation procedures generally provide strong audit evidence to auditors. However, if auditors have suspicion of the reliability of the replies, such as receipt of the replies via facsimile, email or obtaining the replies via an audited company, it is necessary to perform an audit procedure to ascertain the reliability of the replies and mitigate the risks of manipulation and fraud.

Case 2: Alternative audit procedures

- In confirming the outstanding balances of accounts receivable as of the balance sheet date, the engagement team conducted alternative procedures for confirmations not replied through verification of the collection.

  However, the engagement team only verified the collection of receivables through several collections made in the following month of the balance sheet date but did not examine balances of more than 80% of the amounts, which should have been confirmed.

  (Auditing Standards Committee Statement No. 505, paragraphs 5, 9, 11–13, and A11)

- In confirming the outstanding balance of receivables and payables, the engagement team received replies from certain companies that did not indicate any specific outstanding balances.

  However, the engagement team did not perform necessary audit procedures including resending the confirmation letters or conducting alternative procedures.

  (Auditing Standards Committee Statement No. 505, paragraph 11)

Points to Note

External confirmation is an audit procedure that generally provides persuasive evidence. Therefore, if an engagement team is unable to obtain responses to its confirmation requests, it needs to perform alternative audit procedures. At the same time, the team should carefully evaluate whether the audit evidence obtained through alternative procedures is adequate and appropriate in view of the risks of material misstatement.
Case 3: Exception in relation to confirmation

- While there were exceptions over materiality in the accounts receivable confirmation procedure and, in the case of misstatements, it was evident that such exceptions would affect the process of forming an audit opinion, the engagement team did not investigate those exceptions.
  (Auditing Standards Committee Statement No. 505, paragraph 13)

- The engagement team examined the exceptions identified in the process of confirming outstanding balances only by inquiry and did not obtain adequate audit evidence to exclude the possibility of a misstatement.
  (Auditing Standards Committee Statement No. 500, paragraphs 5 and A2; and No. 505, paragraph 13)

**Points to Note**

Exceptions arising from replies to external confirmation might indicate misstatements in financial statements or potential misstatements. Based on this, the engagement team should investigate the differences between the confirmed and stated amounts, and obtain corroborative audit evidence such as specific supporting documents.

If the engagement team determines whether the exceptions corresponds to a misstatement as a result of cause analysis of exceptions, and identifies a misstatement, the team also needs to evaluate the effectiveness of internal control and its impact on the financial statements.

(3) Substantive analytical procedures

Case 1: Identified deficiencies in substantive analytical procedures

- In performing substantive analytical procedures for cost of goods sold (COGS), the engagement team assumed the following factors in developing the expectation of COGS of a restaurant business as a whole:
  
  A. The COGS margin of the audited company is constant, excluding the impact of price fluctuation.

  B. Price fluctuation that affects the audited company coincides with the simple average of the rate of price changes of food and alcohol of the consumer price index published by the Statistics Bureau of the Ministry of Internal Affairs and Communications.

  However, the engagement team did not examine whether the methodology to develop the expectation with the above factors was appropriate, in spite of the fact that the audited company operated a variety of stores such as restaurants, *izakayas* (Japanese-style pubs), and cafes, as well as the scrap and build each year.
  
  (Auditing Standards Committee Statement No. 520, paragraph 4)
In the substantive analytical procedures for sales rebates of the audited company, the engagement team assumed that there was no significant fluctuation in the ratio of rebates to sales, and calculated the expectation of rebates by multiplying sales with the rebate ratio during the previous period.

However, although the rebate contracts differed between customers and sales to each customer fluctuated every year, the engagement team did not examine the appropriateness of the above assumption by obtaining specific supporting information such as review of revisions to the rebate contracts by each customer.

(Auditing Standards Committee Statement No. 520, paragraph 4)

In examining sales, the engagement team mentioned that it had completed substantive analytical procedures. However, the engagement team only compared sales for the current year with the previous year’s sales and budget. For the identified difference, the engagement team concluded that it did not result from an extraordinary cause only based on inquiry to the audited company, instead of considering the appropriateness of using sales for the previous year and budget as expected values. The team failed to determine an amount of difference between the actual and the auditor’s expected values that is acceptable without any additional procedures, thus did not meet the requirements for substantive analytical procedures.

(Auditing Standards Committee Statement No. 520, paragraph 4)

In performing substantive analytical procedures for selling, general and administrative expenses, despite the fact that the amount set as an acceptable amount of difference between expected value and actual value was in excess of materiality, the engagement team did not examine the reasonableness of the level of such amount.

(Auditing Standards Committee Statement No. 520, paragraph 4)

**Points to Note**

In many cases, the engagement team selected substantive analytical procedures as substantive procedures, but only performed annual comparisons that did not meet the requirements of substantive analytical procedures.

The engagement team needs to design and perform substantive analytical procedures that meet the following requirements:

1. In consideration of a test of details (if applicable) that responds to risk of material misstatement that was assessed for certain assertions, determine whether certain substantive analytical procedures are appropriate for these assertions;
2. Evaluate the reliability of data from which the auditor’s expectation of actual amounts or ratios is developed, taking account of the sources, comparability, nature and relevance of information available, and controls over preparation;
(3) Develop an expectation of actual amounts or ratios and evaluate whether the expectation is sufficiently precise to identify a misstatement that, individually or when aggregated with other misstatements, may cause the financial statements to be materially misstated;

(4) Determine the amount of any difference of actual amounts from an expectation that is acceptable without further investigation.

It should be noted that in some cases, substantive analytical procedures met requirements stipulated in the audit standards, but examinations as to the reliability of the data and the accuracy of the expected value, which were necessary to reduce the audit risk to a minimum acceptable level, were not performed. For example, the engagement team used the actual previous period results and financial forecast as expectations without a rational reason when performing such procedures. The engagement team should consider the nature and relevance of information sufficiently, and that any difference of recorded amounts from expectation may turn out to be a material misstatement.

**Case 2: Investigation of results of substantive analytical procedures**

In substantive analytical procedures for personnel expenses (salary, miscellaneous wages, allocated labor expenses), the engagement team identified that a difference between the amounts recorded in manufactured costs and the expectation of the auditor exceeded the acceptable difference. However, they simply assumed that the difference resulted from internal assistance provided from the sales and control division to the manufacturing division to respond to unpredicted sales orders without obtaining sufficient appropriate audit evidences relating to the difference, such as documents to support the assumption that the internal assistance actually occurred.

(Auditing Standards Committee Statement No. 520, paragraph 6)

**Points to Note**

In many cases, the engagement team only performed an inquiry to obtain qualitative reasons regarding the nature of differences when investigating the differences between the amounts recorded on financial statements and the auditor’s expectation. The team did not perform a quantitative investigation and analysis by each cause and did not obtain specific audit evidence to support the qualitative reasons. In substantive analytical procedures, the engagement team needs to investigate differences from expectations and reasons for inconsistencies with other related information considering that the differences subject to further investigations may turn out to be material misstatements.

**4) Audit sampling**

**Case 1: Planning of audit sampling**

- In the substantive procedures for revenue of the audited company, the engagement team selected samples from the last business day of the two selected months (August and January) of the relevant period.
However, the team did not consider whether the way of sampling above could provide a reasonable basis for conclusion about the entire population.
(Auditing Standards Committee Statement No. 530, paragraphs 5 and 7)

- With no internal rules of audit sampling, the engagement team selected 25 or more samples in the test of details for account items (sales, accounts receivable, etc.) that are highly related to the business objectives of the audited company in the audit of internal control over financial reporting, and a few number of samples for other account items.

  However, the engagement team did not consider whether these numbers of samples could provide a reasonable basis for conclusion about the entire population.
(Auditing Standards Committee Statement No. 530, paragraphs 5–6)

- With regard to dividend income and selling, general and administrative expenses that were identified as significant accounts, the engagement team performed selective substantive procedures for transactions exceeding a certain amount during the current fiscal period.

  However, the engagement team did not consider the necessity of additional substantive procedures even though the remainders of the population exceeded performance materiality.
(Auditing Standards Committee Statement No. 500, paragraphs 9 and A55)

**Points to Note**

When designing audit sampling, the engagement team needs to consider the purposes of audit and the most suitable combination of audit procedures to achieve those purposes, in consideration of the characteristics of the population from which samples are to be selected.

In deciding the number of samples, it is necessary to note that the way of determination thereof for tests of operating effectiveness of internal control differs from that for tests of details, in general. Therefore, when using the number of samples, which was for the tests of controls, also for the tests of details as in the above example case, it is necessary to examine whether the number of samples is sufficient for tests of details. Audit sampling should be performed in a way that provides opportunities for all items within the population to be selected; therefore, it is necessary to pay attention to the completeness of the population for selection.

In addition, there still are many failures such as one not to have considered procedures for the remainder of the population after selective examination, or one to perform audit procedures for such remainder.

It should be noted that selective examination for classes of transactions or account balances is an efficient method to obtain audit evidence from the viewpoint of examination considering unusual transactions, high-risk items, and items with significant amounts, and obtaining information including the nature of transactions. However, it should be kept in mind that the sampling of specific items does not provide a reasonable basis for conclusion about the remainder of the population.
Case 2: Projecting misstatements

The engagement team performed confirmation procedures by testing specific items for the year-end balance of accounts receivable. However, the engagement team only extrapolated misstatements in the whole accounts receivable by dividing the identified difference for samples by the ratio of the account receivable balance subject to a confirmation letter to the total balance without performing appropriate audit procedures for the remaining items.

(Auditing Standards Committee Statement No. 500, paragraphs 9 and A55; and No. 530, paragraph 13)

Points to Note

The engagement team should perform appropriate audit procedures for the remaining items because it is impossible to project certain characteristics for the entire population from the results of testing specific items.

If the engagement team identifies any misstatement through tests of details by audit sampling, it needs to project the amount of misstatement for the entire population.

5) Related parties

Case 1: Understanding the audited company’s related party relationships and transactions

While understanding ongoing transactions between the audited company and the management or their close family members, the engagement team only examined whether executive officers including the management and their close family members owned a majority of the shares of any companies. The engagement team did not make inquiries to management to ascertain the existence of transactions between the audited company and such companies, as well as the audited company’s executive officers including the audited company’s management. Thus, the engagement team failed to verify the completeness of the audited company’s transactions with related parties. Further, the engagement team did not consider whether to recognize the risks of material misstatement in relation to transactions with related parties.

(Auditing Standards Committee Statement No. 550, paragraphs 10 and 15)

Points to Note

In addition to the above, there was a case where the engagement team did not examine related parties and transactions with related parties completely. If the management has implemented an internal control for identifying related party transactions and approving significant transactions, the engagement team needs to understand the internal control and perform other appropriate risk assessment procedures as deemed appropriate.

Further, the following examples of failure are found for the disclosure of related party transactions:

- The audited company did not appropriately disclose the terms and conditions while the audited company provided non-interest bearing loans and guarantee without any charge;
The engagement team did not sufficiently examine the terms and conditions of transactions that were disclosed as arm’s length transactions. (Refer to “1. Risk Assessment and Response to Assessed Risks, (2) Identification and assessment of the risks of material misstatement through understanding the audited company and its environment, Case 3.”)

The engagement team should carefully evaluate whether identified relationships with related parties and related party transactions have been properly accounted for and disclosed in accordance with the applicable financial reporting framework.

For information on cases related to identification and assessment of the risks of material misstatement and audit procedures responsive to the assessed risk regarding related party transactions, including the consideration of fraud risk required in the Auditing Standards Committee Statement No. 240, also see “6. The Auditor’s Responsibilities Relating to Fraud in Financial Statement Audits.”

Case 2: Identification and assessment of the risks of material misstatement associated with transactions with related parties

While recognizing that the audited company’s sales from subsidiaries are mostly from a specific company that is a related party, the engagement team did not consider whether to recognize this as a risk of material misstatement.

(Auditing Standards Committee Statement No. 240, paragraph 25; and No. 550, paragraph 17-18)

{Points to Note}  
Related party transactions are often carried out in the normal transaction process, but also tend to carry higher risks of material misstatement of financial statements than third party transactions, due to fraud conducted by related parties without difficulty. Therefore, as a precondition for audit procedures, the engagement team needs to comprehensively understand the audited company’s related parties and its relationships with them, and carefully evaluate the business rationale in identified transactions. The team should keep in mind that significant transactions with related parties outside the audited company’s normal course of business transactions, if any, should be treated as a significant risk.

(6) Going concern

Case 1: Identification of any events or conditions that may cast significant doubt on the audited company’s ability to continue as a going concern

Despite severe business conditions that resulted in continuing operating losses and negative operating cash flow, and difficulties in financing as evidenced by multiple financial institutions’ refusal to provide loans, the audited company mentioned that neither an event nor a condition which might cast significant doubt on the going concern assumption had occurred, maintaining that these losses had arisen from restructuring business operations.

However, the engagement team did not examine the reasonableness of the audited
company’s argument.

(Auditing Standards Committee Statement No. 570, paragraphs 9 and 11)

**Points to Note**

Early signs of significant events or conditions that may damage the continuity of business operations are likely to appear in business activities, so the engagement team should carefully ascertain any events or conditions that would cast significant doubt on the going concern assumption.

It should be noted that the “Cabinet Office Ordinance on the Disclosure of Corporate Affairs, etc.” stipulated an audited company should report the background and progress of the events or conditions that may seriously impact an audited company’s going concern assumptions in the sections “Business-related Risks, etc.” and “Analysis of Financial Conditions, Results of Operations and Status of Cash Flows” of the audited company’s annual securities reports, even though such events or conditions are not serious enough to be subject to additional disclosure in the section “Notes Related to Going Concern Assumptions.” However, there were cases where the audited companies did not report these matters. When there are events or conditions that might cast significant doubt on the going concern assumption of the audited company, the engagement team should consider the potential need to revise the evaluation as to the risks of material misstatement and types, timing and scope of procedures responsive to the assessed risk.

**Case 2: Additional audit procedures when an event or condition is identified**

The audited company accounted for operating losses and net losses for several years including the current period. The engagement team understood this as an event or condition that may cast significant doubt on the going concern assumption, and considered it a significant risk to disclose it at the footnote regarding the going concern assumption.

However, in examining the feasibility of the audited company’s business plan as part of the review of the going concern assumption, the engagement team only made inquiries with persons in charge of the details of the audited company’s business plans, and did not perform necessary audit procedures to verify the management’s argument, including reviews regarding the feasibility of the planned sales or the potential impact of scheduled in-house manufacturing to improve gross margins, etc.

(Auditing Standards Committee Statement No. 570, paragraph 15)

**Points to Note**

In one case, the engagement team did not examine the audited company’s financing plan specifically for the feasibility of financing. In other cases, the engagement team did not sufficiently examine, on a consolidated basis, factors having a significant impact on the going concern assumption, including subsidiaries’ additional financing needs.

The engagement team needs to evaluate the audited company’s financial position comprehensively.
based on specific audit evidence and the effectiveness and feasibility of the measures taken by
management in relation to the assessment of the audited company’s ability to continue as a going concern.

For more information on examination of the reasonableness of accounting estimates in relation to the
audited company’s business plan as the prerequisite for the cash management plan, also see “Case 4:
Evaluation of reasonableness of business plan” of “(1) Matters common to auditing accounting estimates”
of “3. Auditing Accounting Estimates.”

(7) Others

Case 1: Subsequent events

The audited company executed an agreement to extend the due date of the significant loan
that was approximately 20% of the audited company’s total assets, and publicly disclosed the
information.

However, the engagement team failed to consider whether the due date extension was a
subsequent event that would require revisions in the audited company’s financial statements or
affect the audited company’s financial statements in the following year and thereafter.

(Auditing Standards Committee Statement No. 560, paragraph 7)

{Points to Note}

In many cases, engagement teams performed audit procedures related to subsequent events only by
making inquiries with the management. The engagement teams need to perform audit procedures
regarding subsequent events for the period between the balance-sheet date and the date of the auditor’s
report, including at least:

1) Understanding the procedures performed by the management to identify subsequent events;
2) Inquiries with the management;
3) Inspection of the minutes of board of directors meetings;
4) Review of the latest subsequent monthly financial statements, if available.

Case 2: Risk of litigation

The engagement team did not examine the potential loss that might be incurred by the
audited company, despite the audited company’s lawyer’s comments at a confirmation letter
about the existence of “matters that may give rise to filing for litigation or claim for
compensation, correction, assessment or imposition, or equivalent matters to the same
effects.”

(Audit Committee Statement No. 73, paragraph 3)

{Points to Note}

In the case of confirmation with the attorney, the engagement team needs to confirm the facts that
caused the litigation or claim, when it arose or how long it continued, its status and the likelihood of losses
arising therefrom, and an estimate of expected loss.

Additionally, in the case where the payment of compensation due to litigation, etc., is likely to impact the audited company’s financial statements materially, the engagement team should examine the appropriateness and effectiveness of the audited company’s litigation risk management framework.

Case 3: Consolidated financial statements

In the past years, the audited company traded properties with inter companies and eliminated losses arisen from these transactions at the consolidation process.

However, the engagement team did not examine the reasonableness of the audited company’s accounting approach, despite the accounting standard for unrealized losses that prohibited the elimination of the uncollectible portion of the seller’s book value.

(Auditing Standards Committee Statement No. 500, paragraph 5; and Corporate Accounting Standard No. 22, paragraph 36)

{Points to Note}

Other than the example mentioned above, there was a case where the engagement team did not sufficiently understand the audited company and its business environment as a basis for risk assessment of consolidated financial statements. The engagement team did not examine the completeness of elimination of unrealized gains in the case of complicated inter-company transactions. In auditing consolidated financial statements, the engagement team needs to appropriately understand the corporate group, including the assessment of capital structure, substantial control and influence.

In the examination of consolidated adjustment journal entries, there was also a case where the engagement team simply conducted a comparison with the previous period’s amount and inspected materials prepared by the audited company without performing substantive procedures.

For information on typical cases related to consolidated financial statements, also see “4. Group Audit.”

3. Auditing Accounting Estimates

Points of focus

The CPAAOB inspects audit firms regarding auditing accounting estimates from the following perspectives:

- Whether, considering the degree of estimation uncertainty, the engagement team appropriately identifies and assesses the risks of material misstatement in the accounting estimates, and performs appropriate audit procedures to address such risks, particularly considering the reasonableness of management’s assumptions;

- Whether the engagement team identifies any indication of possible management bias, considering the risks of material misstatement due to fraud, and performs further audit procedures responsive to the management bias if any;
Whether, in the case that the engagement team identifies significant risks in accounting estimates, the engagement team performs an evaluation required under Auditing Standards Committee Statement No. 540, paragraph 14 in addition to the planned audit procedure.

Outline of inspection results

In auditing accounting estimates, there were still many cases where the engagement team only understood management’s assumptions and accounting approaches but due to the lack of professional skepticism, did not objectively evaluate management’s arguments regarding the appropriateness of inventory assessment rules and achievability of its business plan that the audited company’s accounting estimates were based upon, thereby failing to examine the reasonableness of the management’s arguments adequately.

Further, required audit procedures were often not performed, due to the lack of understanding of requirements under Auditing Standards Committee Statement No. 540.

Expected response

Accounting estimates are accompanied by uncertainty, and the risks of material misstatement associated with them depend on the degree of the uncertainty. Thus, auditors should examine the estimation uncertainty—including the nature and method of accounting estimates, associated internal control, indications of management bias—and should identify and assess the risks of material misstatement.

Auditors should also perform appropriate audit procedures relevant to the risk of identified and evaluated material misstatements, and verify the reasonableness of the management’s estimates from a critical standpoint as professionals.

(1) Matters common to auditing accounting estimates

Case 1: Reasonableness of management’s assumptions

The engagement team treated the recoverability of accounts receivable and the appropriateness of the amount of the allowance for doubtful accounts as significant risks.

In accordance with the audited company’s manual related to accounting for allowance for doubtful accounts that was prepared in prior fiscal years, the audited company classifies account receivable based on the collection ratio, such as classifying debt with an actual collection ratio of less than 15% within a certain period as a doubtful one. In addition, the amount of allowance for doubtful accounts was to be calculated using the allowance rate set for each debt category, but the threshold for the collection ratio and allowances rate had not been changed since they were set when the manual was prepared.

However, the engagement team did not examine whether important assumptions used by management, such as collection ratio and allowance rates, were still reasonable in the current
The audited company prepared as its internal rules and operated evaluation principle to provide one third of the initial carrying amount of inventory, which was determined to be slow-moving and/or obsolete, per year as valuation loss over three years.

Two companies that became consolidated subsidiaries during the current year due to acquisition had different sales channels from those of the parent company, but adopted the same evaluation principle as that of the parent.

Under such circumstances, the engagement team did not examine whether the principle was reasonable and in line with the actual situation of declining profitability of the inventory.

(Auditing Standards Committee Statement No. 315, paragraph 10; and No. 540, paragraphs 7 and 11)

**Points to Note**

Other than the allowance for doubtful accounts and assessment of inventory assets above, it is necessary to also review the grouping of impairment of long-lived assets to determine whether the rules set by management match the actual situation of the company and whether the rules that were considered in prior fiscal years still match the actual state of the company when there were changes in the company or the environment surrounding the company. However, there are some cases where the engagement team accepted such management’s assumptions without examining them in detail, and simply checked whether the estimate amount was calculated in accordance with management’s assumptions.

Particularly, when a significant risk is identified in accounting estimates, the engagement team must evaluate the following.

1. The methodology taken by management to consider an alternative assumption/result and their reasons for not using such alternative assumption/result; or the process of examining the estimation uncertainty in the case that management did not consider an alternative assumption/result;
2. The reasonableness of management’s material assumptions;
3. Management’s intent and capability to abide by their principles, in terms of the reasonableness of the management’s material assumptions or the appropriateness of the applied reporting framework.

The audited company used the next year’s budget to assess both the recoverability of deferred tax assets and the impairment of long-lived assets. The audited company did not account for any deferred tax assets because of the uncertainty of the budget, while they considered it unnecessary to recognize the impairment loss of long-lived assets as the budget was likely to be certain. Therefore, the management’s judgment on accounting estimates was inconsistent.

However, in examining accounting estimates, the engagement team did not verify the
reasonable of applying inconsistent assumptions to project business performance for an identical period.

(Auditing Standards Committee Statement No. 500, paragraph 10; and No. 540, paragraphs 12 and 20)

**Points to Note**

Other than the examples above, there were cases where the engagement team did not sufficiently consider the inconsistency in management’s assumptions among accounts. For example, although the audited company accounted for impairment loss on its subsidiary’s shares in individual financial statements, the equivalent goodwill recognized in its consolidated financial statements was not written off. The engagement team should comprehensively evaluate the consistency of events they understood.

**Case 2: Review of the method of accounting estimation**

The audited company had continued to calculate the allowance for sales returns on a tax law basis, which was applied in the current year.

However, the engagement team did not verify the reasonableness of management’s accounting policy for the allowance for the current year, including the appropriateness of calculation based on tax law considering the current year’s actual sales returns ratio and gross profit ratio of the audited company’s business.

(Auditing Standards Committee Statement No. 540, paragraphs 7 and 12)

**Points to Note**

The engagement team needs to verify the method of the management’s accounting estimates by evaluating whether the management’s method for measurement is appropriate under certain circumstances and whether the management’s assumptions are reasonable under the applicable accounting standards. Further, when reviewing the management’s methods for accounting estimates, the engagement team should consider the following:

- Examination as to the accuracy, completeness and relevance of the basic data used for accounting estimates, and whether the accounting estimates are made appropriately with the basic data and management’s assumptions
- Examination as to the source of information, the relevance, and reliability of external data or information (including information from external experts used by management)
- Examination as to the consistency of information for accounting estimates and the recalculation thereof
- Examination of management’s review and approval for accounting estimates

**Case 3: Review of prior period accounting estimates**

The audited company accounted for deferred tax assets at year-end in the amount not
exceeding the projected taxable income for the next year. In examining the recoverability of
the deferred tax assets, the engagement team independently estimated the achievable level of
taxable income for the next year by multiplying the next year’s projected net income before
tax by the expected achievement rate determined based on the actual achievement rate for the
current year (the ratio of actual amount to the initial projection) and concluded that the amount
of deferred tax assets accounted for by the audited company was at an appropriate level.

However, the engagement team did not appropriately examine the reasonableness of the
audited company’s calculation of the expected achievement rate for the following year without
taking into account that the current year’s achievement rate for the net income was
substantially lower than the initial projection.

(Auditing Standards Committee Statement No. 540, paragraph 8)

POINTS TO NOTE

In some cases, when reviewing the audited company’s accounting estimates, the engagement team only
ascertained the reason for deviation between the value estimated in the previous period and the outcome
in the current period and did not consider the background of the deviation in evaluating the
management’s estimate for the current period. The team needs to note that reviewing the accounting
estimates for the previous period is required in order for identifying possible management bias and
evaluating the degree of the estimation uncertainty.

It should be noted that the existence of a difference between outcome of accounting estimate and
estimated amounts in the previous year’s financial statements does not necessarily indicate a
misstatement in the previous year’s financial statements. However, it is possible to make a reasonable
basis that the audited company could estimate close to the actual amount, if management used certain
information available when estimating, as well as information reasonably expected to be obtained or
considered when preparing the financial statements. In such a case, the auditor needs to consider that the
difference could increase misstatements in the previous year’s financial statements.

CASE 4: EVALUATION OF REASONABLENESS OF BUSINESS PLAN

The audited company has a large amount of outstanding receivable from the subsidiary that
is in a negative equity position. The subsidiary predicted to turn to be profitable for the
following period in its business plan partly because it merged another subsidiary of the audited
company that is profitable (hereinafter referred to as the “merged company”) and partly
because it planned to change the conditions of transactions with the audited company effective
from the following period. The audited company has not recorded allowance for doubtful
accounts for the subsidiary on grounds of the expected recovery of profitability.

However, the engagement team did not examine the achievability of the business plan, such
as whether it was possible to continue to gain profits from the businesses that the subsidiary
took over from the merged company, and the feasibility of changing the conditions of
transactions with the audited company.
(Auditing Standards Committee Statement No. 540, paragraph 12)

**Points to Note**

In examining accounting estimates, including the valuation of investments and loans for affiliated companies, impairment of long-lived assets and recoverability of deferred tax assets, the engagement team often evaluates the reasonableness and other aspects of the business plan prepared by management.

However, in many cases, the engagement team evaluated the plan qualitatively only through interviews with management without verification of the details of the business plan with supporting evidence. As such, the engagement team did not sufficiently or appropriately examine the reasonableness of the business plan from a critical standpoint as professionals. The engagement team should carefully consider the business plan by examining the consistency between the plan and the business environment as understood by the engagement team, comparing it with past actual results, verifying specific measures that form the basis of figures contained in the plan such as increasing revenues and reducing costs, and examining their feasibility.

(2) Evaluation of shares of affiliate companies

**Case: Examination of net asset value and recoverability**

In valuing the shares of a non-performing subsidiary, the engagement team did not examine the reasonableness of the audited company’s decision not to realize impairment on the shares, despite the fact that the audited company assumed that the value of the shares would recover to approximately 50% of the book value in five years based on the subsidiary’s business plan.

(Auditing Standards Committee Statement No. 540, paragraph 12)

**Points to Note**

When the net asset value of shares of the audited company’s affiliate company for which the market value is extremely difficult to estimate declines by more than 50% from the acquisition cost, the audited company is required to consider that the net asset value deteriorated substantially and recognize an appropriate amount of impairment loss. This treatment should also apply to the valuation of shares of affiliate companies shortly after establishment or acquisition, and the net asset value of the shares should be carefully considered in analyzing the difference between an affiliate company’s performance and its business plan.

(3) Valuation of receivables

**Case 1: Review of recognition and measurement**

While the audited company classified overdue receivables from the overseas sales agency as receivables doubtful, it did not account for an allowance for doubtful accounts because the receivables would be fully recoverable with collateral assets.
However, the engagement team did not examine the reasonableness and recoverability of the amount such as the condition and disposal value of the assets that the audited company maintained to be recoverable.

(Auditing Standards Committee Statement No. 540, paragraph 14)

**Points to Note**

When recognizing and measuring receivable value, it is necessary to consider the completeness of target receivables, including the appropriateness of receivable classification.

Additionally, if it is difficult to obtain data that helps judge the debtor’s ability to pay, there is a simplified method of valuing receivables with default possibility by, for example, provisioning 50% of the balance net of the estimate disposal value of the collateral. As for individually material receivables with default possibility, it is necessary to obtain sufficient data to the extent possible and to sufficiently examine whether the receivables are appropriately estimated at the time of valuation.

**Case 2: Self-assessment of loans (appropriateness of borrower category)**

- When auditing a tier-2 regional bank, the engagement team did not examine the audited company’s decision-making as to borrower category as follows:
  a) While the engagement team considered that the “Reasonable and Highly Achievable Plan” prepared by a debtor was unachievable, the team agreed with the financial institution’s decision to classify the debtor as category “requires attention.” The engagement team did not perform audit procedures for the inconsistency above.
  b) While recognizing that a debtor had substantially negative assets with an unrealized loss, the financial institution did not adjust the debtor’s financial profile (including an adjustment based on the unrealized loss). However, the engagement team acknowledged the unrealized loss but did not examine the appropriateness of the financial institution’s decision.
  c) Despite the fact that a huge loss incurred by Company A was covered by Company B, the audited financial institution did not treat the two companies as a group in its self-assessment process. However, the engagement team did not examine the appropriateness of not treating the two companies as a single group and assign to a single borrower category or review the financial condition of the two companies as a borrower group.

(Auditing Standards Committee Statement No. 540, paragraph 14)

- The engagement team performed substantive procedures for the self-assessment, as of the tentative cut-off date of December 31, conducted by the financial institution, which is a cooperative financial institution (it is similar to a credit union) but did not perform the roll-forward procedures for the remaining period.
Points to Note

In auditing a deposit-taking financial institution, it is often the case that the audited company’s evaluation of loans is identified as a significant risk, and the audit plan is designed based on the internal controls. In that case, it is necessary to perform tests on the operating effectiveness of controls, in addition to substantive procedures. Re-performance, in addition to inspection of records and documents, is considered effective in the tests of operating effectiveness of controls regarding the allowance for doubtful accounts.

Extracting a borrower as a sample and re-performing self-assessment on it can cover both the tests of operating effectiveness and of details. However, it is important to fully consider that even when using identical information, procedures vary based on the purpose of these tests.

Case 3: Accuracy of loan loss ratio

In the examination of loan loss ratio, the engagement team did not take into account the accuracy or completeness of the beginning loan balance or the amount of loss for a calculation period prepared by the financial institution that is a cooperative financial institution.

(Auditing Standards Committee Statement No. 540, paragraph 12; and the Japanese Institute of Certified Public Accountants’ Special Audit Committee for Banks and Other Financial Institutions Report No. 4, section IV, item 5)

Points to Note

Other than the example mentioned above, when auditing allowance for doubtful accounts, it is important to perform procedures to verify the sufficiency of allowance, considering any material changes in the creditworthiness of borrowers for the period from the balance sheet date to the date of the auditor’s report.

(4) Inventory valuation

Case: Examination as to the completeness of scope of valuation

The engagement team completed its review of the audited company’s inventory valuation only by verifying the information used to calculate inventory valuation losses recognized by the audited company, and did not trace the book value of inventories to the balance shown in the information used to calculate valuation losses. As such, the engagement team did not verify the completeness, for example, by investigating whether there were other inventories subject to valuation losses.

(Auditing Standards Committee Statement No. 540, paragraph 12)
Points to Note

In addition to the examples above, there were some cases where the engagement team did not examine the reasonableness of the audited company’s methodology for inventory valuation or the appropriateness of its approach for valuation loss calculation.

Also, audited companies have inventories with special characteristics, such as property for sale and development projects in progress, which are different in value and difficult to calculate an objective value for. It is necessary to keep in mind that these special inventories, in general, should not be excluded from the scope of reduction in book value due to a decline in profitability.

(5) Impairment of long-lived assets

Case 1: Review of cash-generating units

The audited company is a retailer that operates multiple stores, and treats areas as the minimum cash-generating unit in considering impairment of long-lived assets.

However, although the engagement team recognized that in accounting standards it was common to treat a store as the minimum cash-generating unit in the retail industry, but did not examine the adequacy of the audited company treating areas, which are larger than a store, as the minimum cash-generating unit.

(Auditing Standards Committee Statement No. 540, paragraph 11; Accounting Standard for Impairment of Long-Lived Assets 2. 6. (1); and Corporate Accounting Standards Implementation Guidance No. 6, paragraph 7)

Points to Note

Other than the case above, there were some cases where the engagement team overlooked the fact that the audited company's cash-generation unit deviated from the actual situation and where the engagement team did not consider the appropriateness of the grouping of corporate assets. In addition, in some cases where it was considered that long-lived assets were no longer impaired due to the change in cash-generating units, the engagement team did not appropriately examine the rationality of the changes.

Cash-generating units should, as a principle, be a unit generating cash flows generally independent of those of other assets or cash-generating units. Therefore, the engagement team should examine the appropriateness of the policy to determine cash-generating units when the audited company monitors operating performance in smaller units than the cash-generating units determined by the audited company.

Case 2: Review of indications of impairment

In the review of the indications of impairment of long-lived assets of a subsidiary that had been loss making in past years, the audited company determined that there was no longer indication of impairment because the subsidiary generated a small amount of profits in the current year. However, the engagement team did not take into consideration other factors to
identify indications of impairment of long-lived assets, such as a rapid decline in sales orders just before the end of the financial year.
(Auditing Standards Committee Statement No. 540, paragraphs 11–12)

- While having accounted for impairment losses on owned idle assets (land/building) in past years, the audited company determined that impairment recognition was no longer necessary even though the assets remained idle in the current year.
  However, the engagement team did not examine the reasonableness of the audited company’s determination not to recognize impairment loss while it identified a significant decline in roadside land prices in the area surrounding the idle assets.
(Auditing Standards Committee Statement No. 540, paragraphs 11–12)

**Points to Note**

Other than the examples above, there was a case where the engagement team agreed to the audited company’s argument that its deteriorated performance was unusual and temporary, without analysis of the cause. The engagement team should carefully examine indications of impairment.

Further, as a principle, when an asset or a cash-generating unit becomes idle, it means a change that will reduce the recoverable amount of such asset or cash-generating unit significantly in the scope and method that the asset, etc., is used. Therefore, when examining the indications of impairment of idle assets, the engagement team needs to carefully examine the reasonableness of the amount of time that has passed since the assets became idle. For example, in the case where an asset just fell into the idle state, the engagement team should examine whether the duration can be treated as time necessary to determine the future use of the asset.

**Case 3: Review of recognition and measurement of impairment**

The engagement team did not examine the reasonableness of the audited company’s determination of the estimation period to calculate future cash flows without taking into account the remaining economic life of machinery, a major asset of each asset group.
(Auditing Standards Committee Statement No. 540, paragraphs 11–12)

**Points to Note**

The audited company must largely rely on estimated future cash flows to decide whether to recognize impairment loss and to measure such loss. Therefore, when verifying the management’s assertion on the necessity to recognize impairment loss, the engagement team should note that it is necessary to carefully examine components of the estimated future cash flows, including the remaining economic life used to calculate the utility value of assets, and the business plan that is the basis of estimation, and the feasibility of the business plan. Additionally, when the audited company adopted net sale value as the asset’s recoverable value, the engagement team should carefully examine the basis of calculating the net sale
value.

(6) Valuation of goodwill

Case 1: Cause analysis, allocation of goodwill to identifiable assets and amortization period

For an acquisition completed in the current period, the audited company accounted for the difference between the net assets of the purchased company and the acquisition costs as goodwill.

In this regard, the engagement team ascertained that the amortization period of five years determined by the audited company was appropriate only on the basis that the period did not exceed 20 years. Therefore, the team did not examine the appropriateness of the goodwill amortization period by verification of the period during which the subject goodwill would remain effective and the reasonable period of return on the investment.

In addition, despite an accounting standard stipulating that a relatively large amount out of acquisition costs allocated as goodwill may indicate the possibility of goodwill impairment in the year of acquisition, the engagement team determined that there was no indication of impairment based on the operating profit generated by the acquired subsidiary on an unconsolidated basis without taking into account the goodwill amortization. As such, the engagement team failed to examine whether to take impairment loss in line with the accounting standard.

(Auditing Standards Committee Statement No. 540, paragraphs 11–12; and Revised Guidance on Accounting Standard for Business Combinations and Accounting Standard for Business Divestitures paragraph 77)

Points to Note

Major issues in recognizing goodwill in business combination include the adequacy of allocation to goodwill and other accounts, and the period of goodwill amortization. The engagement team needs to carefully examine the reason for goodwill arising, by comprehensively ascertaining identifiable assets and liabilities and examining the appropriateness of allocation of acquisition costs to them. Particularly, in the case of negative goodwill, the engagement team needs to analyze the factors for the goodwill arising and carefully examine the accounting treatment used by the audited company, such as the adequacy of allocation to other identifiable assets and liabilities, keeping in mind that negative goodwill is treated as profit when it occurs.

Additionally, the acquirer must estimate a reasonable period as the goodwill amortization period for each business combination based on the expected duration that the goodwill will remain effective, while the accounting standard also allows use in reference of a reasonable payback period. With this understanding, the engagement team should be aware that it is necessary to verify the adequacy of the amortization period applied by the audited company.
Case 2: Indications of goodwill impairment

The engagement team acknowledged substantial changes in the business environment surrounding the audited company’s consolidated subsidiary for which goodwill was recorded, such as the resignation of the president of the subsidiary at the acquisition and substantial underachievement of the subsidiary’s earnings against the business plan. However, the engagement team did not adequately examine whether these circumstances should have been treated as indications of impairment.

(Auditing Standards Committee Statement No. 540, paragraphs 12 and 17)

Points to Note

As noted in Case 1 above, when the amount of allocation to goodwill and other intangible assets is relatively large, it may be considered as an indication of impairment even in the first year of business combination. As such, the engagement team needs to adequately examine whether there is any indication even in the first year of goodwill recognition, if the amount is considerably large.

(7) Recoverability of deferred tax assets

Case 1: Review of company classification

The audited company classified itself as a “company class 4 proviso” as specified in Audit Committee Statement No. 66 paragraph 5 based on its taxable income before deducting tax losses carryforward in the current and previous years, although the audited company had significant tax losses carried forward at the end of the current year.

However, the engagement team did not adequately examine the cause of the tax losses carryforward, and the reasonableness of this classification, including whether the losses occurred due to an extraordinary, special cause.

(Auditing Standards Committee Statement No. 540, paragraphs 11, 12 and 17; and Audit Committee Statement No. 66, paragraph 5 (1))

Points to Note

In relation to the company classification specified in the Corporate Accounting Standards Implementation Guidance No. 26 “Revised Implementation Guidance on Recoverability of Deferred Tax Assets” (Note), the engagement team needs to remain conservative and carefully check the company classification in light of relevant accounting standards.

(Note) Following the publication of the Corporate Accounting Standards Implementation Guidance No. 26, the Audit Committee Statement No. 66 “Audit Treatment of Judgments with Regard to Recoverability of Deferred Tax Assets” was abolished as of January 19, 2016. However, the latter is applied to consolidated financial statements and non-consolidated financial statements for the consolidated accounting and fiscal years that start earlier than April 1, 2016, except in cases where the Corporate Accounting Standards Implementation Guidance No. 26 is adopted early.
Case 2: Estimation of taxable income

The audited company accounted for deferred tax assets in the amount derived by multiplying the expected taxable income for the following year based on income before taxes in the medium-term management plan by a certain ratio.

However, the engagement team simply confirmed that the deferred tax assets accounted for coincided with the calculation document without examining the achievability of income before taxes for the following year, the details of the amendment of final tax returns, and the adequacy of the ratio.

(Auditing Standards Committee Statement No. 540, paragraph 12)

Points to Note

In reviewing the recoverability of deferred tax assets, the engagement team often examines the reasonableness and other aspects of the business plan prepared by the audited company's management for estimation of taxable income. There are cases where the engagement team judges that the estimation is conservative and achievability is high based solely on the fact that management calculated the estimation by multiplying the business plan by achievement rates in past years, without critically reviewing the business plan itself. In this regard, see the points to keep in mind provided in “Case 1: Reasonableness of management’s assumptions” and “Case 4: Evaluation of reasonableness of business plan” in “(1) Matters common to auditing accounting estimates.”

If the audited company posts deferred tax assets based on the sufficiency of taxable income backed by its earnings capability, the business plan, a basis for taxable income, should in principle be approved by the board of directors. Further, in the case of material adjustments between the business plan and taxable income, the engagement team needs to perform audit procedures to secure the feasibility of taxable income, including verification of the reasonableness of adjustments from profits in the business plan to taxable income.

Case 3: Review of scheduling

For the valuation loss on shares of a subsidiary recorded in the past, the audited company estimated the timing of the reversal of the temporary difference, and concluded that the deferred tax asset associated with the valuation loss was recoverable.

However, the engagement team, in considering the recoverability of deferred tax assets, only ascertained the management’s intention to sell the shares through discussions and a management representation letter, failing to examine the feasibility of the intended sale based on the fact that the audited company had not executed sales for a long time.

(Auditing Standards Committee Statement No. 540, paragraph 14)
In many cases, the engagement team did not appropriately or sufficiently examine the feasibility of the schedule for tax deduction of temporary difference in the future. For example, there is inconsistency between the assumption for valuation of securities and allowance for doubtful accounts and the planned period for tax deduction of relevant temporary differences in the future. The engagement team needs to exercise due care when examining the reasonableness of the schedule for tax deduction of deductible temporary differences arising from the valuation of investments in affiliated companies in particular, because complicated conditions such as organizational restructuring may often be involved.

(8) Retirement benefit obligations

Case: Reliability of basic data

The audited company outsourced the calculation of retirement benefit obligations to a pension actuary, an external expert, and booked allowance for retirement benefits based on the calculation result prepared by the actuary.

In examining the allowance for retirement benefits, the engagement team used as audit evidence the calculation results of the pension actuary that the management used.

However, the engagement team did not examine the accuracy and completeness of data of base salary, etc., of employees, which form the basis of the retirement benefit obligations calculation and which was prepared by the audited company to the pension actuary.

(Auditing Standards Committee Statement No. 540, paragraph 12)

When estimating retirement benefit obligations, it is necessary for auditors to examine the relevance, completeness, and accuracy of the basic data of the audited company upon using the service of the management’s expert.

In addition, although actuarial assumptions such as the discount rate could influence the calculation results for retirement benefit obligations greatly, there were some cases where the engagement team failed to examine the reasonableness of actuarial assumptions. The engagement team should be aware of the importance of examining the appropriateness of the actuarial assumptions made by the audited company.

(9) Asset retirement obligations

Case 1: Completeness of accounting process

The engagement team did not examine the reasonableness of the audited company not conducting a complete analysis of long-lived assets subject to recognition as retirement obligations, whether the lease agreements require the site to be restored to its original condition, and whether the laws and regulations require long-lived assets to be retired.

(Auditing Standards Committee Statement No. 540, paragraphs 11–12)
Case 2: Appropriateness when reasonable estimates cannot be obtained

The audited company is a retailer that mainly rents land and buildings to operate multiple stores. Although all of the rented properties are under restoration obligations, the lease contracts of most of the properties allow automatic renewal of the contract period. Therefore, the audited company did not record asset retirement obligations on the grounds that the timing of the performance of asset retirement due to closing of stores was not clear and the amount could not be reasonably estimated. On the other hand, the audited company set a policy to record asset retirement obligations for stores whose closing timing was clear, as well as for unprofitable stores that were unable to confirm the lessor’s intention to renew the contract, on the grounds that it was possible to reasonably estimate the asset retirement timing and amount. The engagement team agreed to this.

However, the engagement team did not examine whether the amount could be reasonably calculated even if all evidence available as of the accounting closing date was taken into consideration and the best estimation was made for profitable stores that were unable to confirm the lessor’s intention to renew the contract.

(Corporate Accounting Standards Implementation Guidance No. 21, paragraph 2; and Auditing Standards Committee Statement No. 540, paragraphs 11–12)

Points to Note

Even though the amount of asset retirement obligations cannot be fixed due to the lack of clarity in timing and methods, asset retirement obligations should be recognized if information is available to reasonably estimate the timing and probability regarding the fulfillment of asset retirement obligations. Since cases where asset retirement obligations cannot be reasonably estimated are limited to cases where the amount cannot be reasonably estimated even though all evidence available as of the account closing date is taken into consideration and the best estimation is made, the engagement team should keep in mind that it should examine the reasonableness of the management’s assertions including the possibility of obtaining information useful to estimate asset retirement obligations when the audited company asserts that asset retirement obligations cannot be reasonably estimated.
4. Group Audit

Points of focus
Recent fraud cases identified at domestic and overseas subsidiaries have increasingly drawn the attention of financial statement users. The CPAAOB inspects audit firms from the following perspectives.

- Whether the group engagement team appropriately assesses risks associated with the group financial statements and develops overall audit strategy and a detailed audit plan;
- Whether the group engagement team identifies significant components appropriately, including consideration of components with significant risks related to the group financial statements based on the nature and status of each component;
- Whether the group engagement team appropriately understands the component auditors, gets involved in their procedures, and evaluates the appropriateness of such procedures performed;
- Whether the group engagement team appropriately communicates with the component auditors in situations that may influence the work of the component auditors during group audit, such as when a fraudulent material misstatement in relation to the group financial statements is identified;
- Whether the group engagement team evaluates the component auditors’ reports, requests additional audit procedures if necessary, or performs the audit procedures, thereby obtaining sufficient appropriate audit evidence; and whether the engagement team, in response to the component auditors’ reporting of an uncorrected misstatement, appropriately assesses the impact of such misstatement over the group financial statements.

Outline of inspection results
In identifying significant components in group audits, in one case, the group engagement team did not perform sufficient risk assessment by considering the qualitative aspect. In another case, the group engagement team did not sufficiently communicate with component auditors, or review the sufficiency of identification of significant risks related to group financial statements and audit procedures relevant to such risks.

Expected response
In group audit, there were many cases where the engagement team excessively relied on the audit results of component auditors without adequately evaluating it. When auditing the audited company’s financial statements and group financial statements, the auditor should evaluate the work of others, always keeping in mind that the ultimate responsibility to issue an appropriate audit report is on the group auditors that issue opinions of all the financial statements.

Group audit requires the group engagement team to sufficiently communicate with the component auditors about the scope and timing of audit procedures, as well as findings concerning the audit procedures performed for component financial information, and to obtain sufficient appropriate audit information.
evidence about component financial information and consolidation processes so as to express opinions about whether the group financial statements have been prepared according to the applicable financial reporting framework. Therefore, the group engagement team needs to develop an appropriate audit plan and perform audit procedures, and needs to evaluate whether sufficient appropriate audit evidence has been obtained to gain a basis for opinion regarding group financial statements.

Particularly, when a significant component exists in overseas countries, the group engagement team is required to grasp the status of material overseas audited companies, and identify existing risks.

To perform group audit appropriately, the group engagement team, in addition to the knowledge and experience required for general audit practice, is required to be equipped with additional capability to cope with any situations, such as language skills to instruct the component auditors in overseas countries and knowledge of the accounting of specific countries.

To achieve the above, audit firms should carefully assign engagement partners and other professionals to maintain and improve the quality of group audit. Additionally, in the case where the overseas component auditors are arranged in a multi-layered and complex structure, especially when involving an overseas component auditor outside the group auditor’s network, audit firms should develop frameworks to provide instructions and support in relation to the group engagement team’s instructions to and supervision of the overseas component auditors, evaluation of reports prepared by the overseas component auditors, and understanding of the audited company’s management control over new affiliate companies added through acquisition, etc.

(Observed effective efforts)

There was a case where the following efforts were made in maintaining and improving the quality of group audit.

A dedicated section was established within the audit business department to support and monitor engagement teams that conducted global group audits. Specifically, the dedicated section gathered information through questionnaire surveys of the engagement teams and interviews with group auditors with a significant component in emerging countries.

The PICOQC emphasized through training that it was necessary to consider not only quantitative materiality such as value-based but also qualitative materiality, such as the existence of significant risk, when selecting significant components, in view of cases where a problem occurred in a component other than a significant component, resulting in revision of the financial statements.

The audit business department prepared, in cooperation with the advisory department, a checklist that summarized the key points in controlling overseas affiliate companies. The checklist enables the improvement of the financial reporting environment and risk control environment of new overseas affiliate companies of the audited company.
Case 1: Significant components

- Given that the audited company’s main business was manufacturing, the group engagement team identified the audited company’s valuation of fixed assets as a significant risk in the group financial statements.

  However, in determining a significant component, the group engagement team did not consider components potentially involving the above significant risks at the group financial statements.

  (Auditing Standards Committee Statement No. 600, paragraph 8)

- The group engagement team did not assess the risk of material misstatements in the group financial statements by taking into account the qualitative materiality of fixed assets owned by foreign manufacturing subsidiaries and sales transactions by a sales subsidiary.

  (Auditing Standards Committee Statement No. 600, paragraph 17)

Points to Note

When determining significant components, the engagement team should consider the audited corporate group’s characteristics and circumstances including qualitative materiality such as potential significant risks in the group financial statements, on top of the financial materiality of individual units.

Case 2: Materiality

The group engagement team set the materiality for significant components at the same level as, not lower than, the materiality for the group financial statements as a whole.

(Auditing Standards Committee Statement No. 600, paragraph 20)

Points to Note

To reduce the possibility that the total uncorrected and undiscovered misstatements in the group financial statements exceed group materiality to a minimum acceptable level, component materiality shall be set lower than group materiality. The group engagement team needs to sufficiently understand the audited company group and its business environment in deciding component materiality. If any change occurs in the business environment, the team needs to appropriately consider its effects and examine the adequacy of component materiality to perform appropriate audit procedures to response audit risks for each component.

Case 3: Deciding audit tasks regarding the financial information of components

- Regarding the financial information of components of individual financial significance to the group, the group engagement team failed to perform audit procedures based on the materiality of individual components. For example, the group engagement team did not perform substantive procedures on major accounts such as revenues,
The group engagement team did not conduct analytical procedures on non-significant components.

(Auditing Standards Committee Statement No. 600, paragraph 27)

**Points to Note**

The group engagement team should consider whether audit tasks have been planned for both significant components and other components appropriately.

**Case 4: Involvement in tasks undertaken by component auditors**

The group engagement team did not assess the appropriateness of procedures performed by the component auditors for the significant risk of revenue recognition in the group financial statements.

(Auditing Standards Committee Statement No. 600, paragraph 30)

**Points to Note**

The group engagement team shall be involved in the risk assessment performed by the component auditors and identify significant risks in the group financial statements.

However, in one case, a significant component auditor identified significant risks and reported to the group engagement team, but the group engagement team did not sufficiently evaluate the risks. In another case, the group engagement team obtained the audit plan and other information from component auditors later than it should have received them. The group engagement team needs to sufficiently communicate with the component auditors at opportune times, identify significant risks of the group financial statements, and assess the reported risks.

**Case 5: Consolidation process (uniform accounting policies)**

The audited company prepared its consolidated financial statements without adjusting the financial information of overseas components under local accounting standards to Japanese GAAP.

However, the group engagement team did not adequately check whether there was any account requiring adjustments due to differences in accounting standards.

(Auditing Standards Committee Statement No. 600, paragraph 34)

**Case 6: Communication with component auditors**

The group engagement team had identified a significant risk in the group financial statements in relation to revenue recognition, but did not communicate it to the relevant overseas component auditor.
Case 7: Evaluation of audit results communicated from component auditors

The group engagement team sent audit instructions to significant component auditors and received responses. However, with regard to uncorrected misstatements that were reported in the responses by the component auditor, the group engagement team had not decided whether it was necessary to review the related audit documentation prepared by the component auditor, and did not request the component auditor to include the misstatement in the summary of uncorrected misstatements to be attached to the management representation letter. Furthermore, the group engagement team did not examine whether an internal control deficiency reported by the component auditor should be a material weakness, or whether it should be reported to the group’s management.

Case 8: Sufficiency and appropriateness of audit evidence obtained

The group auditor identified the management override risk as a significant risk, and instructed the auditor of the relevant significant component to perform journal entry tests.

However, the group engagement team did not evaluate as to whether the component auditor had obtained sufficient appropriate audit evidence.

Points to Note

As pointed out in the examples above, there were a number of cases where the group engagement team simply obtained information from the component auditors on the results of their audit procedures and did not evaluate regarding the sufficiency and appropriateness of audit procedures performed for significant risks. It should be noted that, to respond to significant risks of the group financial statements, the group engagement team needs to evaluate the sufficiency and appropriateness of audit procedures planned by the component auditors through appropriate communication.

Of note, even if the component auditors are network firms, the group engagement team also needs to evaluate the obtained audit evidence.
5. Making Use of Experts

**Points of focus**

The auditor may make use of experts to obtain sufficient appropriate audit evidence if the auditor needs expertise in areas other than accounting or auditing. The CPAAOB inspects whether the experts used by the engagement team are equipped with the necessary qualifications, competency and objectivity in light of the purposes of auditing financial statements and whether the auditor evaluates the appropriateness of the experts’ work.

**Outline of inspection results**

There was a case where the engagement team did not sufficiently communicate with the experts on the scope and purpose of work to be used, or did not sufficiently assess the appropriateness of the work of experts used by the auditor.

**Expected response**

In using the work of others, there were many cases where the engagement team excessively relied on the work of others and did not adequately evaluate it. When auditing financial statements, the engagement team is required to evaluate the work of others, always keeping in mind that the ultimate responsibility for the audit opinions of the whole financial statements is on the group auditors.

When using expert services, the auditor should determine the necessity of use, assess the qualifications, competency and objectivity of the experts, and evaluate the appropriateness of the experts’ work for audit purposes. In using the experts’ work, the engagement team needs to sufficiently consult with the experts on the purpose and scope of work to be used, without leaving everything to the experts, in order to obtain sufficient audit evidence conforming to the audit purpose.

**Case 1: Agreement with experts**

In the valuation of real estate assets for sale that had been held for a long time as of the date of the financial statements, the audited company utilized valuation reports issued by a real estate appraiser.

In connection to this, the engagement team did not give appropriate instructions to the selected expert by clarifying the specific tasks requested, including the details, scope and purposes, and thus the engagement team and the expert were not in agreement with each other regarding their roles and responsibilities.

(Auditing Standards Committee Statements No. 620, paragraph 10)

**Case 2: Evaluation of adequacy of experts used by the auditor**

The engagement team identified the valuation of real estate inventory for sale as a fraud risk,
and requested an expert to perform an assessment of it.

However, the engagement team did not examine the adequacy of the expert’s work even though the expert did not use the methodology specified by the engagement team.

(Auditing Standards Committee Statement No. 620, paragraphs 11–12)

Points to Note

Before using experts’ work, the engagement team needs to avoid relying entirely on their work, and to determine the scope of work to be used through consultation with the experts, assess their qualification, competency and objectivity, and evaluate the appropriateness of the experts’ work for audit purposes.

For points to note in the case where audit evidence is based on the work of experts used by the audited company’s management, refer to the section “2. Audit Evidence.”
6. The Auditor’s Responsibilities Relating to Fraud in Financial Statement Audits

Points of focus

Users of financial statements are increasingly paying more attention to fraud that may result in material misstatement on financial statements. Considering this, the CPAAOB inspects the auditor’s response to fraud risks in financial statement audit from the following perspectives:

- Whether the engagement team maintains professional skepticism throughout the audit, and exercises such skepticism so as not to overlook any circumstances that indicate the possibility of a material misstatement due to fraud, when assessing the risks of material misstatement due to fraud, responding to such risks, and evaluating audit evidence that has been obtained;
- Whether the engagement team discusses the possibility of a material misstatement due to fraud; and places emphasis on where and how material misstatement due to fraud may exist, including how fraud is committed, without assuming reliability and integrity of the audited company’s management, directors, and company auditors.
- Whether the engagement team evaluates whether the information obtained from other risk assessment procedures and related activities indicates that one or more fraud risk factors are present and takes them into account in identifying and assessing the risks of material misstatement due to fraud at two levels: the financial statement level and the assertion level;
- Whether the engagement team obtains audit evidence more relevant, reliable and/or quantity of audit evidence, for the risks of material misstatement due to fraud at the assessed assertion level than in cases where no risk of fraud has been identified;
- Whether the engagement team evaluates if a misstatement, in the case that one is identified, is indicative of fraud; recognizes that, when such misstatement is determined to be indicative of fraud, an instance of fraud is unlikely to be an isolated occurrence; and pays extra attention to the relationship with other aspects of the audit, particularly evaluating the reliability of statements by the management, and reviews and modifies its audit plan as needed after evaluating the implications of such misstatement;
- Whether the engagement team makes inquiries of and asks for explanations from the management when it identifies any circumstances that indicate the possibility of a material misstatement due to fraud during the audit, and performs additional audit procedures; and modifies its risk assessment and planned responses to audit risk to include audit procedures that are specifically responsive to the types of possible fraud if it determines that any suspicion of a material misstatement due to fraud exists;
- Whether the engagement team communicates with company auditors who supervise the execution of duties by directors, if it determines that a suspicion of material misstatements due to fraud exists or suspects fraud involving the management.
Outline of inspection results

There were cases of significant failures in audit procedures related to fraud risks in the financial statement audit such as: the engagement team overlooked indications of possible frauds although the risk of material misstatement due to fraud could have been identified in the planning and conducting stages of audit; and the engagement team determined the misstatement to be an error without skeptical consideration, although there was a suspicion of fraud involving the management.

We have also observed cases such as: the engagement team failed to assess risks of material misstatement due to fraud in view of changes at the audited company; the engagement team did not consider the risks of material misstatements due to fraud other than in revenue recognition; the engagement team did not sufficiently perform audit procedures to respond to the assessed risks although the team identified risks of material misstatement due to fraud in revenue recognition; the engagement team performed only perfunctory procedures for risks related to management override; the engagement team did not carefully assess fraud risks therein although the team identified related party transactions and unusual transactions.

Expected response

Conventionally, auditors have been expected to maintain professional skepticism. Since the Fraud Risk Response Standard emphasizes the maintenance and exercise of professional skepticism, auditors should pay attention to the fact that they are expected to maintain professional skepticism in all processes of auditing and exercise it when examining the risks of material misstatement due to fraud.

In particular, all auditors must once again recognize that the reliability of audit has once again been called into question following the recent cases of accounting fraud.

Therefore, when planning, in order to examine if there are fraud risk factors, auditors are required to understand major fraud cases published as well as general and industry specific business practices that might be used for fraud, obtain information through interviews with managers and other employees, and carefully examine whether such information indicates the existence of fraud risk factors, through discussions within the engagement team.

Furthermore, auditors should consider identified fraud risk factors and identify and evaluate risks of material misstatement at two levels: the level of financial statements as a whole, and the assertion level.

In responding to risks of material misstatement due to fraud that they evaluated, auditors should always keep in mind that there is a possibility that material misstatement due to fraud could occur, and draw up general responses to the risks of material misstatement due to fraud at the level of the entire financial statement and at the assertion level.

In implementing procedures to cope with the risks of material misstatement due to fraud, auditors should keep in mind that they are required to obtain audit evidence, which is more relevant or reliable, or greater in quantity, for assertions related to the identified risk of fraud than for other assertions for which no risk of fraud is identified.

If auditors identify any circumstances that indicate the possibilities of a material misstatement due to
fraud during the course of audit, they should make inquiries of and ask for explanation from the management and should perform additional audit procedures to determine whether a suspicion of a material misstatement due to fraud exists. If auditors identify the suspicion of a material misstatement due to fraud in such case that the management explanations are not considered reasonable, it is necessary to note that they should modify their risk assessment and planned procedures responding to audit risks, and conduct audit procedures that are specifically responsive to the types of possible fraud.

(Observed effective efforts)

An audited company (private tutoring school), upon establishing preventive internal control over fictitious revenue recognition with no track record of classes, considered obtaining signatures from the students and their parents upon attending class as external evidence of the transactions, but was reluctant to do so on the grounds that it was bothering. Against this situation, the engagement team, saying that external evidence of the transaction was fundamental, convinced the audited company to appropriately develop the internal control.

(1) Discussions by the engagement team, risk assessment procedures, and related activities

Case 1: Understanding of fraud cases in an audited company and the industry to which such audited company belongs

The engagement team identified that a different form of transactions such as purchases and consignment existed in the audited company’s sales transactions, as well as business practices such as sales based on change of title of inventory.

However, the engagement team did not assess fraud risk factors based on this understanding of such business activities of the audited company and industry practices.

(Auditing Standards Committee Statement No. 240, paragraphs 11 and 25)

(Points to Note)

The engagement team needs to sufficiently perform risk assessment with an understanding of the audited company's nature of business, the industry-specific business practices, and previous fraud instances. The team then needs to develop an appropriate audit plan responsive to the identified risks related to the assertions, so as to perform sufficient and appropriate audit procedures responding to such risks.

In addition, it is necessary to maintain and exercise professional skepticism in identifying fraud risk factors, including incentives or pressure to commit fraud, or events or situations which create opportunities to do so; as well as in assessing the risks of material misstatement due to fraud.
Case 2: Discussion within the engagement team

The engagement team did not discuss where risks of material misstatement by type of fraud existed on the financial statements, including the possibility of fraud that may occur in a relationship with a related party or in a transaction with a related party, and also did not share such information within the team.

(Auditing Standards Committee Statement No. 240, paragraphs 14, F15-2)

POINTS TO NOTE

Other than the examples of deficiencies mentioned above, the engagement team only carried out discussions within the team routinely. The team often did not hold substantial discussions including the examination of possible risks in relation to the audited company in reference to published fraud cases. There were also some cases where the engagement team only directed fraud-related inquiries to the management or communicated with the management and company auditors routinely, and the information obtained was not reflected in the risk assessment.

(2) Identifying and assessing the risks of material misstatement due to fraud

Case 1: Identifying and assessing fraud risks in revenue recognition

Although it is required to presume that there are risks of fraud in revenue recognition, the engagement team did not examine the rationality of not identifying the risks of material misstatement due to fraud in revenue recognition.

(Auditing Standards Committee Statement No. 240, paragraph 25)

Case 2: Risks related to management override

Although the engagement team was required to identify risks related to management override as significant risks, it did not identify them.

(Auditing Standards Committee Statement No. 240, paragraph 30)

POINTS TO NOTE

When identifying and assessing the risks of material misstatement due to fraud, the engagement team shall, based on a presumption that there are risks of fraud in revenue recognition, evaluate which types of revenue, sales transactions or assertions give rise to such risks.

The engagement team shall keep in mind that it needs to identify and assess the risks of material misstatement due to fraud at two levels—at the level of the financial statements as a whole and at the assertion level—after sufficiently examining risks related to management override according to information and judgment the team has obtained.

When an engagement team identifies instance of fraud or obtains information that indicates possible fraud, the team needs to timely communicate to the appropriate level of management responsible for preventing and detecting fraud, as well as company auditors, to inform them of matters related to their
responsibility. If the engagement team suspects fraud or possible fraud involving management, it needs to communicate the suspicion to company auditors and discuss with them the nature, timing and extent of audit procedures necessary to complete the audit, as well as to request the management to take appropriate remedial actions.

(3) Response to assessed risk of material misstatement due to fraud

Case 1: Journal entries test

- Following a rise in product unit costs due to the revision of standard cost, the audited company deducted the cost variances from the cost of sales and recorded the cost variances as inventory with the closing journal entries.

  The engagement team deemed the revision of standard cost reasonable due to the business environment and understood that it was approved under the appropriate process of the audited company.

  Under such circumstances, the engagement team mentioned that they extracted and examined the above entry in the journal entries test performed as an audit procedure for the risk of management override.

  However, although the engagement team acknowledged a situation where the revision of standard cost was implemented in an unusual way, such as not being implemented by product item and carried out at the year end, they only traced the above entry amount with the calculation documents obtained from the audited company and did not examine whether the allocation of cost variances following the revision of standard cost was appropriately carried out.

  (Auditing Standards Committee Statement No. 240, paragraph 31)

- In verifying the appropriateness of journal entries recorded in the general ledger, the engagement team performed journal entries tests on certain journal entries, such as closing journal entries, but did not verify the completeness of the test scope of journal entries.

  (Auditing Standards Committee Statement No. 240, paragraph 31)

{Points to Note}

Other than the example mentioned above, there were many cases where suspicion arose over the exercise of professional skepticism. The engagement team only performed journal entry testing routinely without fully taking fraud risks into consideration with respect to procedures to respond to audit risks related to management override.

The engagement team shall keep in mind that it needs to formulate and implement effective audit procedures in response to the degree of said risks after understanding that management is in a position to falsify accounting records and prepare fraudulent financial statements by overriding effectively operated internal control.
Case 2: Business rationality of significant transactions

- The audited company transferred outsourcing costs to a third party, which were recorded as expenses during an interim period, to loan to the third party at year end because it was subsequently determined that the costs would be borne by the third party. However, although the engagement team identified the transactions as unusual transactions, the engagement team did not examine whether or not such transactions had business rationality.
  (Auditing Standards Committee Statement No. 240, paragraph 31)

- When selling machinery, a subsidiary of the audited company retained the book value of the asset on the balance sheet as an inventory and recorded revenue at the amount of the sales price, where the book value of the asset should normally be accounted for as “gain or loss on sale of fixed assets.”

  However, in examining the appropriateness of the accounting treatment, the engagement team did not examine whether the transaction was a significant transaction that was outside the audited company’s normal course of business or of an unusual nature, considering the auditor’s understanding of the audited company or its environment and information obtained during the audit.
  (Auditing Standards Committee Statement No. 240, paragraph 31; and No. 315, paragraph 10)

{Points to Note}

Significant transactions falling outside the audited company’s ordinary transaction process or which can be deemed unusual may have been carried out to conduct fraudulent financial reporting or to conceal misappropriation of assets, indications include the following:

- The form of such transactions appears extremely complex (e.g., transactions involve multiple audited companies within a consolidated group or multiple unrelated third parties);
- The management has not discussed the nature of and accounting for such transactions with company auditors of the audited company, and there is inadequate documentation;
- The management places more emphasis on the need for a particular accounting treatment than on the underlying economic reality of the transactions;
- Transactions that involve non-consolidated related parties, including special-purpose audited companies, have not been properly reviewed or approved by company auditors of the audited company;
- The transactions involve previously unidentified related parties or parties that do not have the substance or the financial strength to support the transactions without assistance from the audited company under audit.

If the engagement team identifies any of the above mentioned indications in the course of the audit, the engagement team needs to ask the management for explanation and needs to keep in mind that the team should implement additional audit procedures in order to judge whether there are suspicions of material
misstatement due to fraud.

Furthermore, there are some cases where, in conducting fraudulent accounting treatment, the audited company obscured accounting treatments by carrying out complicated transactions with several business partners. Therefore, in examining the business rationality of significant transactions, it is important for the engagement team to not only examine individual transactions but also assess and examine the entire picture of a series of related transactions by paying attention to the timing and conditions of such transactions.

Case 3: Response to fraud risks in revenue recognition

- With regard to revenue recognition, the engagement team identified the accuracy assertion of revenue based on the percentage-of-completion method, which measures the progress of construction work using an estimated overall cost to measure revenue, as a fraud risk. However, regarding a transaction where gross profit significantly decreased since the audited company increased the estimated overall cost, the engagement team only traced the revised estimated overall cost to the estimated overall cost stated in the internal documents of the audited company and made inquiries with the person in charge, and failed to perform detailed tests in response to the fraud risk for revenue transactions using the percentage-of-completion method. In addition, the engagement team did not perform procedures for possible bias on the part of management such as retrospective review of timeliness of the revision to the estimated overall cost or of the reasonableness of the assumptions used in the estimate, although there were several cases where the estimate made by the audited company in past years differed from the actual results or the subsequent re-estimation.

(Auditing Standards Committee Statement No. 240, paragraphs 29 and 31; No. 330, paragraph 20; and No. 540, paragraphs 8, 14, and 20)

- The engagement team identified a very strong incentive at the audited company to expand its revenue and profits since the company was in the rapid growth stage. Under these circumstances, the team identified a fraud risk where sales transactions with unclear underlying economic rationale might occur. The team also identified more than one unusual sales transaction in the audited company’s rapid increased sales.

However, the engagement team did not examine the appropriateness of the selling price of raw material reselling transactions of the above sales transactions, as well as the reasonableness of recording bill and hold sales. In addition, the team did not examine the reasonableness of changes in collection terms regarding sale transactions of merchandise. Moreover, they did not assess whether the above transactions implied a possibility that they were carried out for fraudulent financial reporting purposes.

(Auditing Standards Committee Statement No. 240, paragraphs 29, 31 and 34; and No. 330, paragraph 20)
Bill and hold sales, which were prohibited by the audited company’s internal rules, were identified at the audited company through direct whistleblowing to the engagement team. The audited company insisted that the sales transactions in question were realized by the year-end since the merchandise subject to the sales had already been shipped by the year-end.

Against this argument, the engagement team conducted a short notice inspection of the storage site on the day following the year-end, in order to examine the audited company’s argument that the deposited inventory was shipped by year-end, and confirmed that the inventory was removed and no physical items remained.

However, the engagement team did not perform for fraud risks that were necessary for this matter, such as tests based on evidence including shipment slips, if the merchandise was delivered to the customer, and ascertaining whether similar sales existed, since they determined that their procedures above were sufficient as tests of the fact of shipment.
(Auditing Standards Committee Statement No. 240, paragraph F35-2)

With regard to the cause of exceptions noted in responses to confirmation request for accounts receivable from sales transactions to a leasing company, the engagement team received a reply from the leasing company stating that the cause of the exception was that no account payable would be recorded until the start date of the related lease agreement with the end users, which would be more than a year later than the date of leasing company’s receipt.

However, the engagement team did not examine reasonableness of the occurrence and cut-off assertions of the sales transactions, including the rationale of the transactions and the contract conditions pertaining to them.
(Auditing Standards Committee Statement No. 240, paragraph 22)

The engagement team identified, for the entire revenue of the audited company, the risk of fictitious revenues recognition as a risk of material misstatement due to fraud.

The engagement team checked domestic transactions against copies of invoices and settlement notes, while checking export transactions against invoices.

However, the documents were prepared by the audited company, and the engagement team did not obtain audit evidence that was more relevant or reliable for the risk of whole fictitious revenue recognition.
(Auditing Standards Committee Statement No. 240, paragraph 29; and No. 330, paragraphs 5 and 20)

Points to Note

As with the examples of identified deficiencies mentioned above, there were deficiencies in procedures for risk assessment and procedures for responding to the assessed risk in relation to revenue recognition.
• In one case, the engagement team did not sufficiently perform risk assessment on revenue recognition with an understanding of the audited company’s business and its business environment, including its type of business and the characteristics of its sales transactions. The team therefore did not plan appropriate audit procedures.

• In another case, the engagement team identified risks of material misstatement due to fraud in revenue recognition but did not specifically identify the kinds of risk that existed in each assertion. The team, therefore, did not plan appropriate audit procedures and respond to audit risk.

In addition, there were cases where the engagement team only routinely verified books against vouchers overlooking an abnormal profit ratio and agreement details inconsistent with the realities.

For revenue recognition, Auditing Standards Committee Statement No. 240, paragraph 25 stipulates “When identifying and assessing the risks of material misstatement due to fraud, the auditor shall, based on a presumption that there are risks of fraud in revenue recognition, evaluate which types of revenue, revenue transactions or assertions give rise to such risks,” while paragraph 29 prescribes “Auditors are required to obtain audit evidence, which is more relevant or reliable, or greater in quantity, for risk of material misstatement due to fraud at the assessed assertion level than in cases where no risk of fraud is identified for the assertion.” Particular attention should be paid in implementing responses to audit risks.

Case 4: Response to fraud risks in transactions with related parties

In examining a loan that may be relevant to a related party, the engagement team directly confirmed with the original borrower and assessed the assets pledged by the borrower as collateral.

However, the team did not carry out audit procedures, such as obtaining a full understanding of the flow of capital and the reasonableness of the loan transaction with an eye to possible fraud, by taking into account the fact that the objective of the original loan was unclear.

(Auditing Standards Committee Statement No. 240, paragraphs F11- 2 and 31; and No. 550, paragraph 22)

Points to Note

According to Auditing Standards Committee Statement No. 550, paragraph 11, discussions within the engagement team “shall include specific consideration of the susceptibility of the financial statements to material misstatement due to fraud or error that could result from the audited company’s related party relationships and transactions.” In auditing related party transactions, the engagement team needs to consider the risks of material misstatement due to fraud.

In entrepreneurial companies in particular, owner-managers are often so strongly influential that internal control may not function over related party transactions. Understanding these characteristics of companies, the engagement team needs to obtain sufficient appropriate audit evidence in performing risk assessment procedures and responses to audit risk in connection with related party transactions.
Case 5: Responses to situations that imply material misstatement due to fraud

After a customer filed for bankruptcy, the audited company amended its past financial statements because transactions with the customer from past years were fraudulent transactions with no transaction reality. It was also described in the third-party committee report on this fraud that the audited company had been aware that the customer substantially had negative assets at the beginning of transactions.

However, the engagement team did not examine the existence of suspicion of material misstatement due to fraud, although the fact that the audited company did not provide the engagement team with the information was an example of a situation that implied material misstatement due to fraud.

(Auditing Standards Committee Statement No. 240, paragraphs F11-2, 23, and 34)

It was discovered that the audited company recognized revenue for a product, the payment for which had been made in advance but which had not been delivered to the customer. The engagement team interviewed the audited company’s executive officer and obtained the following background to such accounting:

A. An e-mail urging employees to achieve their monthly sales targets was sent to all employees from the representative director & president; and
B. The specific instruction to record advance payments as revenue was notified to all stores by the manager in charge of stores in an e-mail sent;

However, the engagement team determined the misstatement as due to an error without fully evaluating whether a circumstance that indicated the possible material misstatement due to fraud, and did not perform examinations to comply with the Standard to Address Risks of Fraud in an Audit.

(Standard to Address Risks of Fraud in an Audit No. 1, paragraphs 1–4; its Appendix 2, paragraphs 3–4; and Auditing Standards Committee Statement No. 240, paragraph F11-2)

Points to Note

Other than the examples mentioned above, there were cases where the engagement team determined the revenue recognition to be a circumstance that indicated a possible material misstatement due to fraud and conducted audit procedures such as making inquiries of the management and inspecting documents, but failed to fully exercise professional skepticism such as not implementing additional procedures even though some of the descriptions in the documents were inconsistent with the explanations given by the management.

Auditors should pay attention to the fact that they are required to heighten their professional skepticism, determine whether a circumstance is suspicious of a possible material misstatement due to fraud, and perform audit procedures that address such suspicions, based on their understanding of the business practice specific to the industry to which the audited company belongs, as well as audited
company motives and opportunities to commit fraud.

Attention should also be paid to the fact that fraudulent financial reporting is made in the following ways:

- Falsification, forgery, and alteration of accounting records and vouchers, the bases for financial statements
- Misstatement and intentional exclusion of transactions, events, or material information on financial statements
- Intentional inappropriate adoption of accounting standards regarding amounts, classification, or disclosure

(4) Evaluation of audit evidence

Case: Evaluation of identified misstatement during the audit

During a branch audit the engagement team detected a misstatement in posted sales, and requested that the audited company revise it. However, the team did not assess whether the misstatement fell under an indication of fraud, including by reviewing similar transactions at other branches. In addition, the team did not perform additional audit procedures including examination of the quantitative impact on the whole audited company and control deficiencies, and as a result, overlooked misstatements at other branches.

(Auditing Standards Committee Statement No. 240, paragraph 34)

{Points to Note}

As in the examples of identified deficiencies mentioned above, there were deficiencies in procedures for fraud-related risks, including failure to sufficiently assess whether the misstatement identified during the audit fell under an indication of fraud, failure to assess the possibility of the identified misstatement occurring in the audited company as a whole, and failure to reconsider risk assessment if circumstances that may indicate the possibility of a material misstatement due to fraud were identified.

If the engagement team identifies the suspicion of a material misstatement due to fraud, the team needs to revise its planned risk assessment and responses to audit risks, and implement audit procedures that directly respond to the situation of possible fraud, including sufficient examination of the suspicion of material misstatement due to fraud, in order to obtain sufficient appropriate audit evidence regarding the suspicion.
7. Audit of Internal Control over Financial Reporting

**Points of focus**

Auditors should express audit opinions based on evidence obtained by themselves as auditors, such as whether the internal control report assessed by the management was prepared to appropriately present the results of the assessment of internal control effectiveness in accordance with generally accepted internal control assessment standards.

Under these circumstances, the CPAAOB inspects audit firms regarding auditing internal control from the following perspectives:

- Whether the engagement team develops an audit plan in consideration of materiality, with an understanding—based on the audited company’s business environment and business characteristics—of the design and operation of internal control and assessment thereof by the management;
- Whether the engagement team evaluates the way the management decides the scope of assessment as well as its reasonableness; and particularly in the case that the management prepares an internal control report that excluded some part of the transaction cycles that could not be assessed, the engagement team should examine the reasonableness of the management’s exclusion of the scope and the effects of the exclusion on the financial statement audit;
- Whether the engagement team appropriately assesses the deficiencies identified by the management; especially in evaluating the degree of control deficiencies, does the team examine the potential impact of the deficiencies and the possibility of the occurrence of a material misstatement by taking into consideration the quantitative and qualitative effect on the overall internal control of the audited company;
- Whether, in the course of an internal control audit, the engagement team reports the deficiencies detected by the auditors to the appropriate person at an opportune time and examines the possibility of the deficiencies being a material weakness;
- Whether, if there could be some material weaknesses, the engagement team reports such possibility to the management, so as to correct and to examine progress made in correcting the deficiencies at an opportune time, while examining the quantitative and qualitative effect on the overall internal control of the audited company and the possibility of material misstatements;
- Whether the engagement team examines the potential impact on the financial reporting by the misstatements found during the course of the financial statement audit.

**Outline of inspection results**

In some cases, the engagement team, without enough professional skepticism, relied on the results of the audited companies’ internal control assessment, without evaluating the adequacy of the scope of internal control assessment, the internal auditors’ ability and independence, the adequacy of samples, assessment scheme and so on.
Some engagement teams only responded in form to changes of the business environment of the audited company such as those of significant business locations or units because of acquisition and commencement of new business or other. Other engagement teams did not examine the appropriateness of management using the previous year’s results of the evaluation for IT general controls. Other engagement teams did not examine whether the identified deficiencies could constitute material weakness. The other engagement teams did not obtain enough audit evidence to evaluate the remedial actions against the relevant material weakness.

**Expected response**

Auditors should sufficiently understand the design, the operation, and the assessment methodologies of the internal control so as to integrate internal control auditing and financial statement auditing considering materiality for effective and efficient audits.

Meanwhile, the purpose of the internal control reporting system under the FIEA is to ensure disclosure reliability through managements’ assessment of their internal controls over financial reporting and by audits of their assessment. Therefore, auditors should lead the audited company to design internal controls based on the audited company’s background, including its size and business structure.

To meet the expectations mentioned above, auditors need to examine the scope, timing and appropriateness of audit procedures to evaluate the adequacy of the scope of internal control assessment, the methodologies of internal control assessment, and the assessment of the significance of internal control deficiencies. They should not perform procedures uniformly and routinely without sufficient examination.

Careful assessment should be performed concerning whether sufficient appropriate audit evidence was obtained particularly on the audited company’s business locations/units deemed to have relatively high risks, such as processes newly added to be assessed.

(1) Evaluation of the Scope of Assessment of Internal Control

**Case 1: Selection of significant accounts**

The audited company (a labor-intensive consulting firm) considered sales, accounts receivable, and inventories as accounts for the audited company’s business objectives and included them in the scope of internal control assessment.

However, the engagement team did not assess whether personnel expenses, which were larger in amount than inventories according to the characteristics of the audited company’s business, should be included in the scope of internal control assessment.

(Auditing and Assurance Practice Committee Statement No. 82, paragraphs 98 and 100)
Points to Note

“Important accounts for operational objective (three accounts: sales, accounts receivable and inventories)” are just examples, described in the Practice Standards for Management Assessment and Audit concerning Internal Control over Financial Reporting. It is necessary to note that important accounts should be appropriately selected in consideration of the audited company’s type of industry, business environment and business characteristics. In the event of changes in the audited company’s business activities and profit structure, in particular, important accounts need to be carefully selected.

In addition to the above example case, net sales are often used as an indicator for selecting significant business locations or units. However, it must be noted that using a different or additional indicator may be more appropriate depending on the environment or nature of the business of the audited company.

Case 2: Identifying significant business processes

The engagement team identified the risk of appropriate evaluation of the shares of affiliate companies as a significant risk. However, the engagement team did not examine whether there was a rational reason for the exclusion of business processes associated with the significant risk from the scope of internal control assessment.

(Auditing and Assurance Practice Committee Statement No. 82, paragraph 112)

Points to Note

Business processes, related to the accounts with significant risks, should be usually selected for internal control assessment by the management because of their characteristics. If such business processes are not selected, the engagement team should note that they are requested to discuss again with the management regarding the management’s method of deciding the scope of assessment as well as the basis of the decision, and carefully evaluate the reasonableness of the scope of assessment.

If the engagement team considers that the business processes selected by the management for assessment are not appropriate, the engagement team needs to request the management to take additional actions, including reconsidering the business processes to be assessed, in accordance with the degree of impact on financial reporting.

If some processes included in significant business locations or units are excluded from assessment because of their limited relevance to material businesses or operations and small impact on financial reporting, the engagement team should carefully evaluate the reason for their exclusion from assessment, etc.

(2) Evaluation of Assessment of Internal Control

Case 1: Sampling

- In assessing the operation of internal controls over revenue recognition, the engagement team used the audited company’s tests of controls, but did not examine the appropriateness of the selection method and sample size the audited company had extracted.
In assessing the operation of internal controls over operational processes of significant business locations or units, the audited company selected samples only from certain months from the entire population that covered 12 months. However, the engagement team did not examine whether the management’s sample selection method has provided a reasonable basis for conclusion about the entire 12-month population.

(Auditing and Assurance Practice Committee Statement No. 82, paragraphs 153 and 158)

Case 2: Assessment of design and operation of internal control

In assessing the operating effectiveness of the period-end financial reporting processes, the engagement team inspected documentation of management assessment. However, they overlooked deficiencies that could be classified as a material weakness, such as deficiencies in the control related to comprehensively identify the scope and transactions of related parties, and in the control related to accurately disclose consolidated statements of cash flows and of income, since they didn’t sufficiently inspect the company documentation.

(Auditing and Assurance Practice Committee Statement No. 82, paragraph 167)

{Points to Note}

Other than the examples mentioned above, in some internal control evaluation, some engagement teams documented as audit evidence only the results of control activities, such as a signature on a document. With a sufficient understanding of Auditing Standards Committee Statement No. 230 (“Audit Documentation”), a team needs to document significant facts identified in the course of performing procedures and professional judgments, as well as the results of the procedures, in a manner that enables experienced auditors without involvement in the audit to understand the situation. Meanwhile, in evaluating the scope of internal control assessment, an engagement team also needs to pay attention to changes in the audited company’s business activities and earnings structure, regardless of audit experience in the past years.

Furthermore, in implementing a detailed test and tests of controls for the same transaction as a dual-purpose test, the engagement team needs to pay attention to whether it can take procedures that are suited to both purposes of the test, especially whether audit evidence obtained is appropriate for the assertion of account and internal control to be assessed.

It should also be noted that evaluation of the design and operating effectiveness of the financial reporting process must be carefully performed, since the process is one of the most important business processes concerning the reliability of financial reporting but its frequency is lower than other operational processes that are related to daily transactions.
Case 3: Timing of assessment procedures

In developing its plan for responding to financial statements audit risk, the engagement team planned to rely on the related effective internal controls. However, the team did not complete its evaluation on the design and operating effectiveness of IT general controls and operation-processing controls by the date of the auditor’s report for the Companies Act. (Auditing Standards Committee Statement No. 300, paragraph 8, No. 330, paragraphs 5, 6, and 10; Auditing and Assurance Practice Committee Statement No. 82, paragraph 27)

Points to Note

If the engagement team plans to rely on related internal controls that it assumes to be effective in deciding the nature, timing and extent of substantive procedures in the financial statement audit, it needs to assess the effectiveness of the company-level controls and IT general controls that support the process-level controls as well as the subject controls before performing important substantive procedures.

Case 4: Management’s use of assessment results of prior years

In management’s assessment of IT general controls over sales systems used at significant business locations or units, the audited company used the results of prior years’ assessment for certain internal controls.

However, the engagement team did not examine whether it was appropriate for the management to use the results of prior years’ assessment, according to the Practice Standards for Management Assessment and Audit concerning Internal Control over Financial Reporting. (Practice Standards for Management Assessment and Audit concerning Internal Control over Financial Reporting II. 3 (3) (v) D (Note))

Points to Note

When the management continuously uses the results of previous year’s assessment of operating effectiveness in assessing IT general control items, the engagement team should note that it is necessary to examine whether the items have particularly material impact on the reliability of financial reporting, whether there had been any material changes in effectiveness of the design from the previous year, whether the results of previous year’s assessment of operation were effective, and whether operating effectiveness has been assessed once every several accounting periods.

(3) Evaluation of Deficiencies

Case 1: Assessment of deficiencies in design and operation of internal control

The audited company said it had remediated deficiencies in the business process pointed out by the engagement team by the end of the period.

However, the engagement team did not obtain adequate audit evidence to prove that the deficiencies in the business process had been remediated by the end of the year.
Case 2: Determination of material weaknesses

Regarding the results of internal control assessment by management, the engagement team obtained a list of matters to be remedied that was prepared by management, and understood that management assessed that there was no material weaknesses although there were deficiencies as of the year-end.

However, the engagement team did not examine the appropriateness of the results of assessment by the management concerning such control deficiencies.

Case 3: Assessment of internal control over misstatement

The engagement team detected an overstatement of sales and cost of sales of the same amount and the audited company did not revise the financial statements since it did not have an impact on net profits. However, the engagement team did not examine whether the misstatement mentioned above was caused by control deficiency, nor did they consider the impact on the internal control assessments in the financial statement audit or confirm whether the audited company treated the matter as a deficiency in the management’s assessment of the internal control reporting system.

{Points to Note}

Deficiencies in the internal control can be classified into deficiencies in design and deficiencies in operating effectiveness. Deficiencies in design include the absence of internal control and failure of the existing internal control to fulfill the objectives of the internal control, while deficiencies in operating effectiveness consist of failure to perform the internal control as designed, the existence of many errors in performing internal control and a poor understanding of the nature and objectives of the internal control by the person who performs the internal control.

When finding a deficiency in internal control, the engagement team is required to: confirm which classification it falls under; take into account its quantitative and qualitative materiality and compensating control; calculate the potential quantitative impact of the deficiency discovered; and examine which accounts will be affected by such deficiency and to what extent, and the possibility of material misstatement. The team needs to pay attention to the fact that it is required to carefully judge if the deficiency found falls under material weaknesses.

Further, it should be noted that, if the misstatement identified by the auditor was due to ineffective internal control, it may imply the possibility of other misstatements.
(4) Use of Management Assessment

Case: Extent of using the work of internal auditors

The engagement team adopted an approach that relied on internal controls for significant risks identified in revenue recognition, and used the results of internal control assessment conducted by internal auditors of the audited company in its assessment of control effectiveness.

However, they did not examine the appropriateness of the assessment method, including the sufficiency of sample size examined by internal auditors.

(Auditing Standards Committee Statement No. 610, paragraph 9)

Points to Note

In many cases, engagement teams use the work performed by the audited company’s internal auditors from the perspectives of effectiveness and efficiency. However, on such occasions, it is necessary to examine if the independence and professional skills of the internal auditors are maintained and if the quality of assessment by the internal auditors is high enough to be used as audit evidence.

In this case, the engagement team should keep in mind that it is necessary to examine the degree of risk corresponding to the internal control where the engagement team plans to use the work performed by the audited company’s internal auditors, the nature and materiality of the internal control, the operations of internal control, the degree of judgment necessary for assessing operations, and the quality of the work performed by the internal auditors.
Certified Public Accountants and Auditing Oversight Board
